film...

## I Choose Chemistry!

Designed to interest young people in science, particularly chemistry and mathematics. Tom, a ninth grade student, receives a chemistry set for his birthday and takes it to school. His interest in it leads to a career in chemistry. Produced by Ruth O. Bradley, San Jose State College.

15 MINUTES. COLOR \$150, RENT \$7.50;  
B & W \$75, RENT \$5.

AND ON THE PRIMARY LEVEL...

## Kittens: Birth and Growth

Two children are present when their cat gives birth to kittens. They learn to care for the pets during an eight-week span. This simple science lesson prepares children for later pictures on human growth and assists teachers in discussions about motherhood. A Lawbets production.

11 MINUTES. COLOR \$110, RENT \$5;  
B & W \$60, RENT \$3.

new Coronet films help teach  
**SCIENCE & MATHEMATICS**  
 in junior and senior high schools

These and other new Coronet films described below are available in either color or black-and-white:

**grades 1-3**

**The Cuckoo Clock That Wouldn't Cuckoo** (11 min.) A delightful film, designed to encourage classroom expression, tells in animation the story of how a careless watchmaker makes a little cuckoo clock go again.

**Spotty the Fawn in Winter** (11 min.) Spotty is growing up as summer changes to autumn. He awakes one day to a strange new world of snow. How he reacts to it is the subject of the film.

**grades 4-6**

**Geography of the United States: An Introduction** (3½ min.) A comprehensive overview of our national geography, this film introduces the series of eight films on U. S. Regional Geography.

**Life in the Alps (Austria)** (11 min.) Against the breathtaking background of the Alps, we see the agricultural activities typical of those who live on the high mountain slopes.

**grades 7-9**

**Rice in Today's World** (11 min.) This film shows how rice is grown in many areas and how important it is in the diet of millions of the world's people.

**grades 10-12**

**Are You Popular?** (New) (11 min.) This new version modernizes the pictorial and narrative treatment of one of the most widely used Coronet films. It shows not only popularity but also views it in a deeper perspective.

**Edgar Allan Poe: Background for His Works** (3½ min.) Original paintings, made expressly for this film, create a meaningful atmosphere for exploring the significance of Poe's works and show highlights of his life.

**Rembrandt: Painter of Man** (19 min.) This film is a beautiful treatment of Rembrandt's life and work through the medium of sixty of his original paintings from all over the world, including many from behind the Iron Curtain. Produced for the Netherlands' Government.

**United States Expansion Overseas (1893-1917)** (3½ min.) This film reviews the important twenty-two years when the U. S. spread its influence to other parts of the world. It shows how domestic politics affected the course of events and how people of the different areas reacted to U. S. expansion.

**Write for preview . . .**

If you are considering purchase, merely let us know which films you would like to preview. There is no obligation other than return postage. For those interested in renting these films, use the coupon to request our general catalogue, which includes a list of major Coronet film rental libraries.

**The Laws of Gases** (11 min.)  
**Laws of Conservation of Energy and Matter** (8 min.)  
**The Sun and How It Affects Us** (11 min.)  
**The Metric System** (11 min.)

Here are four important new additions to the many Coronet films to help teach basic science concepts in grades 7-12. Three of these curriculum-centered motion pictures will awaken new interest in the laws of physics and the nature of physical bodies. The fourth, **The Metric System**, shows the advantages of using metric measurement in scientific observations and calculations, and traces the development of the system.

**CORONET FILMS**

Dept. ES-159  
 Coronet Building  
 Chicago 1, Illinois

Please send me for purchase consideration preview prints of the films on the list I have attached. I understand there is no obligation, except for return postage.

Please send me a copy of your latest catalogue and supplement, describing 823 fine motion pictures and including full information on rental and preview-for-purchase.

## Cover Scene

This official U. S. Navy photo, released by the Department of Defense, shows Robert Stroup of the Vanguard staff examining the surface of the satellite for flaws. (Vanguard I was launched last year on March 17.) The choice of this cover reflects the ever-increasing concern with public interest in science and educational problems encountered in teaching scientific subjects. Also please note the article on page 20 by Henry Chauncey, describing the "Horizons of Science" series, as well as the fact that several of the advertisements in this issue are featuring science materials.

## More "Architectural Solutions for Audiovisual Problems"

The importance of properly functional and attractive design and the awareness of it on the part of architects and school boards receive dual stress this month—in the editorial, and in "To Help Teachers Teach and Children Learn," James M. Meagher's story of Penfield High School. Our readers may wish to refer back to the first story to appear in this series, "An Elementary Instructional Materials Center," by Edwin Carmony, October, page 514. Future "Architectural Solutions" will include an article by our editor-in-chief, Paul Reed.

## Happy New Year!

Although we would like to send everyone our warmest greetings individually, we'll have to be content with a collective HAPPY NEW YEAR! We hope your Christmas holidays were joyous and that the year ahead bring you much happiness and success, both personally and professionally.

## For February—

Articles destined for our annual religious issue include advice on choice of AV materials for church use, current practices in religious use of the mass media. Watch for them!

*The Post office notified us early last month that mailing labels fell off several copies of the December issue. As there was no way for us to trace their destination, please notify us if you failed to receive your copy*

## HOW DARK SHOULD AUDIO-VISUAL ROOMS BE?

**ANSWER:** There is no choice that is always best. The proper amount of light depends on the type of projector, kinds of material and the activity of the student.

Only a venetian blind specially constructed for audio-visual purposes will control ambient light to suit all projectors, subjects and student activities. That is why the Levolor A. V. Blind is already in use in thousands of schools and universities.

Write for Levolor's invaluable survey report "How Dark Should Audio-Visual Rooms Be?" No charge or obligation. Write to Audio-Visual Dept., Levolor Lorentzen, Inc., 720 Monroe St., Hoboken, N. J.

Be sure to specify

# Have you heard?

Teachers learning "how-to-do-it" at Iowa Audio-Visual Fair.

## Iowa Audiovisual Fair

For the first time in many years, the Audio-Visual Education Association of Iowa changed the entire pattern of its program before the Iowa State Education Association Convention in Des Moines on November 7th. In the past, the program had consisted of speakers and demonstrations, but the 1957 meeting was so large that the audience could not view the demonstrations being given on the stage.

The planning committee this year changed the program to include a "how-to-do-it" talk and projected materials demonstration by Harvey Frye, Supervisor, Graphic Arts Department, Audio-Visual Center, Indiana University, then arranged for a series of thirty (30) demonstrations. The talk was presented in a large meeting room and folding doors were closed to two large adjoining rooms where the demonstrations were arranged on tables with signs designating the type of demonstration being presented. Immediately following an introductory talk by Harvey Frye, the doors to the adjoining "Audio-Visual Fair" were opened and the demonstrations started. Demonstrations in the "fair" included such things as: making Polaroid lantern slides, slide talks on magnetic tape, making transparencies for the overhead projector, lifting pictures from the printed page, multi-color

transparencies, mounting of pictures, picture transfer, geographic models, how to make dioramas, using filmstrips in World History, feltboard materials, bulletin boards, photographic techniques, arithmetic aids, and many others.

The demonstrations in the "fair" were given over a two hour period during the afternoon program, allowing everyone in attendance to view the many different "how-to-do-it" demonstrations. Over 1,000 teachers and school administrators attended the program and "fair" and went away with new ideas regarding how they can improve their audio-visual program.

It is the plan of the AVEAI to extend this program next year to include a morning and afternoon program to allow more teachers and administrators to attend. The planning committee also learned they could find more teachers willing to participate than they had space on tables for the "how-to-do-it" demonstrations, so perhaps next year the demonstrations might be expanded to 50 or more with additional time allowed for questions and answers.

The AVEAI would highly recommend this type of a program for teachers and school administrators during a state teacher's convention. Large groups can be accommodated at such an "Audio-Visual Fair" and the demon-

strations can be varied to interest teachers at different grade or subject matter levels. All the teachers can participate in such a meeting by asking specific questions on "how," "why," etc., of other teachers who are teaching the same subject or grade.

## California AV Educators to Hold Conference

The annual conference of the Audio-Visual Education Association of California will be held in Beverly Hills January 29 through 31. The theme, to be reflected through addresses, discussions, demonstrations and exhibits, is "Creativity in Audio-Visual Instruction." Among the featured speakers will be Dr. Charles Schuller, president of DAVI; Dean Howard E. Wilson, UCLA School of Education; Dr. Raymond E. Denno, Sutherland Productions; Maurice Mitchell, president, Encyclopaedia Britannica Films.

## Calendar of Coming Events

- Jan. 22-24—NAVA Midwinter Conference, Jung Hotel, New Orleans, La.
- Jan. 22-24—DAVI Eastern Regional States AV Conference, Trenton State College, Trenton, N. J.
- Jan. 29-31—AV Education Association of California, annual convention, Beverly Hills, Calif.
- Feb. 14-19—AASA national convention, Atlantic City, N. J.
- Feb. 26-28—Harwald Co. annual AV Cracker Barrel, Evanston, Ill.
- Mar. 16-18—Third Medical Motion Picture Workshop, Calvin Company, Kansas City, Mo.
- Mar. 22-25—California Association of Secondary School Administrators Sacramento, Calif.
- Apr. 1-4—American Film Festival, New York City.
- Apr. 2-3—Illinois Audio-Visual Association, conference, Springfield, Ill.
- Apr. 13-16—DAVI annual convention Seattle, Wash.
- Apr. 17-18—NAVA Western Conference, Olympic Hotel, Seattle, Wash.
- Apr. 29-30—Columbus Film Festival 7th annual, Fort Hayes Hotel, Columbus, Ohio.
- May 4-8—SMPTE, 85th semi-annual convention, Miami, Fla.
- Sept. 29-Oct. 2—Industrial Film and AV Exhibition, New York City.

## January 10 Is Deadline for DAVI Ballot!

All members of DAVI are urged to vote for 1959 officers, if they have not already done so. Biographies of the candidates can be found in the December issue of *Audio-Visual Instruction*, but additional names may be written in if the voter so desires. Walter Bell, president-elect last year, automatically becomes president under the rules of the last revision of the constitution. Other nominees for DAVI offices are:

(president-elect) James D. Finn, Clyde K. Miller, Ernest Ticmann; (vice-president) William R. Fulton, J. J. McPherson, William G. Gnaedinger;

(delegates-at-large - vote for three) Lee E. Campion, Horace Hartsell, George E. Ingham, Virginia Kelly, Philip Lewis, Samuel Madden, Wesley C. Meierhenry, Neville Pearson, Constance Weinman.

The nominating committee was composed of Roy Barron, Robert deKieffer, Bill Gnaedinger, Elizabeth Golterman, Frances Hatfield, George Ingham, Henry McCarty, Clyde Miller, Pauline Smith and Paul Witt. Ballots should be mailed to the Department of Audio-Visual Instruction, National Education Association, 1201 16th Street, N.W., Washington 6, D. C.

## Swedish Movie Archives Oldest in the World

The Swedish Film Society, Stockholm, revealed recently that it possesses the oldest film archives in the world. Its collections consist of 370,000 different film stills and 600,000 extra copies, rare film copies, and other historical material. The oldest film in the collection is one taken at the Stockholm exhibition in 1897.

These films, many of them classics, are shown every Saturday afternoon to the public, sometimes accompanied by lectures. Members of the Society are mainly film people, authors, critics and technicians, but it is open to anyone interested. The Society also strives to better conditions in the modern Swedish film.

## One Town, Four AV Workshops

O. L. Detweiler, Audio-Visual Education Director for the Waukegan, Ill., public schools, has scheduled four AV workshops for teachers in his system. The first, October 20, was a language arts program for grades 4, 5, 6. It was attended by 30 teachers and included a film, "Let's Read Poetry," tips on

*"La plume de ma tante est sur le table"*

## Ekotape<sup>®</sup> RECORDERS

**SPEED FOREIGN LANGUAGE STUDY**

*"...Their language is alive immediately"*

Teachers speak enthusiastically about the new tape method of teaching foreign languages. And, note a big difference in achievement — in pronunciation and comprehension. Results of this tape teaching system indicate a significant "break through" in language training and point to a growing acceptance.

Ekotape recorders are an accepted standard in many of these modern language training centers — because they're so dependable, so easy to operate. Controls have been simplified, all are on top in full view. Handy knob gives instant start/stop action. Fidelity, of course, is unexcelled. What's more, the price is completely compatible with school budgets.

Accelerating your language training program? Your Ekotape dealer has full particulars on this new tape teaching method.

equipment use and selection of material and a visit to the AV library. The next, scheduled for Nov. 4, stressed science in grades 4, 5, 6; then, on November 25 there was another on language arts for the first three grades and finally, on January 6, science for grades 1, 2, 3 will be discussed. Detweiler is also principal of the Greenwood School.

### Closed-Circuit TV Embraces Whole Community

An experimental network of closed-circuit television interconnects a housing project, a public school, a health center and a social center in New York's Chelsea district. Live programs originate in the Lower West Side Health Center, in the Hudson Guild Neighborhood House, and in Public School 33—and are distributed to more than 600 families in the John Lovejoy Elliott apartments as well as to the school's 39 classrooms and the principal's office.

General Precision Laboratories, of Pleasantville, N. Y., have provided ten TV cameras, a utility vidicon film chain for piping motion pictures throughout the circuit, and a TV projector giving the school auditorium a 10 foot wide picture. One classroom is fitted with four GLP cameras which can be operated from the control room in the basement of the school. The Settlement House has a similar four-camera setup for the purpose of televising community events such as parents meetings. The master antenna

Closed-circuit TV at work in New York City's Chelsea district

system and cables were furnished by Jerrold Electronics Corporation of Philadelphia.

The project, in its widely varied phases, is being evaluated constantly as a test of intercommunication on a community-wide level, as well as of experimental educational television.

### People in the News

Dr. Robert W. Wagner, Director of Motion Picture Production at Ohio State University since 1946, has been appointed head of the University of

Southern California film department. He succeeds Dr. Robert O. Hall, who will go to the Educational Radio and Television Center, Ann Arbor, a Program Associate.

Dr. Wagner won the Encyclopaedia Britannica Films Fellowship in 1951; he was film writer and director for The Office of War Information from 1942 until 1943, when he became motion picture producer with the Office of Coordination of Inter-American Affairs.

★

Herb Jackman is now the film librarian for the American Dental Association in Chicago.

★

Dr. Ernest Tiemann, director of the Visual Instruction Bureau and associate professor of education at The University of Texas, was recently nominated to serve as president-elect of the Department of Audio-Visual Instruction of the National Education Association and received a three-year appointment to represent DAVI as an advisor on the Association's Educational Policies Commission.

★

William Harley will take the presidential office of the National Association of Educational Broadcasters on January 1. Program director for WHA-AM-FM-TV, he has served as NAEB secretary and director for Region III.

★

Dr. John E. Ivey, Jr., Executive Vice President, New York University, has been named special educational consultant to the Radio Corporation of America.

## School Design for AV

"... We are in the process of making plans for a new school of 1000. I am trying to sell the idea of making each classroom suitable for A-V materials. Our present authorities think one or two audio-visual rooms are enough. Have you some book or magazine references that would help me? Would you be kind enough to write a letter to me giving your recommendations? Our school will be a one-story rambler type and our architects are planning skylight lighting in the classrooms plus usual windows."

Sister M. Bernardine  
St. Margaret's Academy  
1301 Linden Avenue  
Minneapolis 3, Minn.

"... in replying, I am responding not only as Editor... but from my more than twenty-five years experience as responsible head of the audiovisual program in the Rochester, New York, public schools.

Let me tell you first that in a new high school we are building in Rochester, every one of the eighty-six classrooms is being equipped with darkening facilities so that pictures of all kinds may be projected. I am enclosing a copy of the audiovisual committee report that justified this kind of facility for this up-to-date school. The most telling argument in favor of equipping each room was economy. We figured it this way. If we were to have separate audiovisual rooms, we would need at least four. With construction costs being what they are, it would cost more than \$160,000 to build four classrooms. We figured that we could equip all rooms for audiovisual purposes for much less than fifty thousand dollars and thus save a considerable amount of money and at the same time provide much better facilities for instruction. Our Board of Education and school administration saw the sense in taking that course.

I have touched upon this subject of equipping classrooms for audiovisual purposes in several editorials in EDUCATIONAL SCREEN magazine. If you have back copies available, you may wish to refer to the editorials in the June 1958 issue, and in the April 1956, February 1955, and November 1954 issues.

If you want your new school to be a school in which projected pictures can be used effectively in classroom

instruction, you must use every persuasive power you have to prevent the architects from daylighting your classrooms to the extent that audio-visual learning cannot take place. That would be an educational tragedy, and already too many schools have been built that are extremely limited in their effectiveness because of the failure of architects to understand the way learning takes place." — Paul C. Reed.

## Viopticon Slides, Anyone?

The DAVI audiovisual archives collection needs examples of the lightweight, paperbound glass slides used in the Victor "Viopticon," an important link in the evolution of the present 2x2. Any offers?

Wm. F. Kruse, Archivist,  
Ingleside, Ill.

"For the past year or so I have been trying to get along without a subscription to 'The Leading AV Magazine.' I find it not so easy as I had anticipated. Whenever I revise my classified list of articles pertaining to the use of AV aids (twice a year), I must go to the library. I have nothing against libraries—but I prefer to sit at my own desk and read my own magazines and mark them up or cut them up, or, at least, have them available on my own bookshelf.

"Then, when the September issue came out with FREE PUBLICITY announcing my little manual *Audio-Visual Equipment Operation*... the least I can do to show my appreciation is to reinstate my subscription.

"But I need the magazine anyway. I need the annual Blue Book issue. Can you start my subscription with the September issue?"

— Frank F. Gorow  
616 Princeton Circle West  
Fullerton, California

"R. A. Frye's excellent description of our CREATIVITY film in the October issue of Educational Screen stirred up such an interest throughout the country that capacity bookings were made through February."

— James E. Alford,  
Acting Chief of Distribution  
Motion Picture Service,  
U. S. Department of Agriculture  
Washington, D. C.

This was in response to request for a screening before the Chicago Film Council. Arrangements have been made to show a new print at the Council's January 16th meeting.

# Distinguished Design

Here's the motion just the way it was made and passed:

"That NYSAVC establish a citation to be awarded to the architects who achieve distinguished design in school planning for the effective utilization of audiovisual materials;

"That companion citations be presented simultaneously to the school superintendent or head that made this planning possible; and

"That the NYSAVC designate a committee to consider schools recently constructed that might be cited, and to make recommendations."

That's a forward motion if we ever heard of one; and in taking this action the New York State AudioVisual Council may have started something more significant than they know. It will be a way of bringing the best school planning for audiovisual use strikingly to the attention of both architects and school superintendents. It could result in far more serious attention being given to the audiovisual facilities that must be planned into and built into our school buildings if they are to serve their intended purposes.

We don't know just what these awards will look like, or how they will be presented. It is conceivable that the citations to architects would be made at their own state meeting where it would count most with other architects. The citations to school superintendents likewise could be made at their meeting where the attention of all could be directed concretely to the meaning of good planning for good instruction.

The more you think about it, the more you can see. You can just see that *Distinguished Design* plaque on display in the lobby of the new school building. If you listen, you can hear the superintendent and the principal proudly explaining to their visitors what it means to their instructional program. You can also imagine the architect who has been cited for such distinction modestly calling it to the attention of the school board that is his prospective next client.

In our own imagination we can see this idea catching on in other states; and we don't think the NYSAVC would mind at all. The idea might even be picked up and developed by one of the national audiovisual organizations. A state citation would inevitably nominate the architect and superintendent for national consideration and the best plans from all parts of the country would be brought together for citation and stimulation.

We'll try to keep in touch with the NYSAVC Committee as it moves forward, "to consider schools recently constructed that might be cited." We'll try to keep you informed of what they do and how they do it. In any event, we promise we'll do our best to bring to you from New York and other states descriptions and pictures of school buildings in which distinguished design for audiovisual has been achieved.

In the meantime, we should like to nominate for consideration by the NYSAVC Committee the new Penfield High School described on pages 16-18. Here school administrators, architects, and an interested citizen committee planned cooperatively for good use of audiovisual materials. There is a functional plan that works and is working to bring about greater use of audiovisual material and better instruction.

Once a teacher friend of mine, "Sarge" Smith, was serving on a committee concerned with planning audiovisual facilities for classrooms. All of a sudden he lit up like a thousand watt T12 projection lamp and exclaimed, "I have it! What we've got to do is build classrooms in which learning is inescapable!" *Distinguished design* in school planning for the effective utilization of audiovisual materials will help to achieve that kind of Utopian environment where learning is inescapable.

*Paul C. Reed*

# AV in IRAN

by *Dr. Don G. Williams*

Director, Syracuse University Audio-Visual Center

**E**DUCATIONAL motion pictures were totally unknown in Iran until just eight years ago. Today, these specialized films penetrate almost every corner of the country, and this fall Iran will dedicate a \$1,500,000 audiovisual center for the continued production and utilization of educational films and other audiovisual aids.

What sensitized a country almost completely unaware of audiovisual techniques to the tremendous potential of educational films is the story of eight years of cooperative effort on the part of the U. S. Federal government, Syracuse University's Film Unit and the government of Iran.

This unique overseas venture in mass education through motion pictures began in 1950, when at the invitation of the State Department our Audio-Visual Center set up its first overseas film project. Under the conditions of that contract, administered through our Research Institute, we agreed to produce informational films in Iran, using villages as settings, villagers as actors and colloquial language on the sound track.

The whole project was based on the conviction that films made in Iran's own back yard would succeed in communicating with audiences better than American-made films, which with all the splendor of skyscraper settings and mechanized farm locales, had done more to fascinate and confuse than to inform unsophisticated Iranian audiences.

As a first step four film crews were formed, two from Syracuse University and two on subcontract to the university from the University of Minnesota and the University of Southern California. Each crew consisted of a team of six—script writer, director, assistant director, cameraman, assistant cameraman and technical adviser.

When the first crews left in the spring of 1951, it marked the first time that an educational institution had ever become an overseas producer of educational-informational films under U. S. government auspices. Later the university sent film crews to Turkey and Greece for similar film production work.

Once launched, the scope of the project rapidly expanded, and in three years over 100 16mm motion pictures were finished. Most of the films produced were specifically tailored for use in

the Point Four program, and were chiefly concerned with agriculture, health, education and sanitation.

Although a film might take only 25 minutes to show, it frequently took six months to twelve months to produce. While all the shooting was done in Iran, mostly in villages on the outskirts of Tehran, processing of films was done in the States and editing and finish-up was done right on the Syracuse University campus by an audiovisual production staff of twelve. Production manager was Eliot Cooley, assisted by production supervisor Luella Snyder. The stateside staff was also responsible for servicing contracts, and shipping supplies and equipment.

In order to use the Iranian locale to the best advantage in shooting, the film crews had to be mobile. They jogged from village to village in trucks equipped with two motion picture cameras, portable lighting apparatus and an electric generator.

Rough roads made traveling difficult, sometimes even hazardous. There were other obstacles, too. Production was sometimes slowed down when Iranians didn't understand what the crew was doing or why they insisted that actors repeat a scene several times for a shooting. This reserve and even suspicion was not unwarranted, since many of these villagers had had absolutely no contact with a motion picture until suddenly they found themselves acting on one!

Still another impediment to production was the language handicap. Wherever the film crew went, an interpreter had to go along to give instructions and directions to Iranian actors.

As the number of film productions increased and as Iranians saw more and more films, their original reluctance not only vanished but was replaced by a whole-hearted enthusiasm for the project. Sometimes, though, this enthusiasm was almost explosive. Once during the showing of "How to Bathe a Baby" the entire audience disappeared. All the mothers had rushed home to give baby a bath just as they had seen it demonstrated in the film.

Often an entire village would turn out when a U. S. government mobile unit or a technical assistance specialist arrived with films showing how to care for cattle, control flies, improve cotton production, store food and use irrigation

The mayor of a small Iranian village explains to his people the mission of the Syracuse University Film Crew.

water.

The Iranian government soon recognized that the motion picture was the best single communications device for a country where illiteracy is high and where often only one person in a village can read. In just one year four million Iranians viewed Syracuse University produced films. By the lecture method a technical adviser might have reached an audience of some 400.

The tremendous impact these films were having throughout Iran, coupled with Point Four's ultimate goal of training counterparts of U. S. specialists, resulted in a review of the role of our overseas film crew. Emanating from that review was the conclusion that we must turn our attention from producing films to teaching film production. In 1953 we started the first overseas apprentice training program in motion picture production, which was supported by Point Four and the Iranian government through its Ministry of Fine Arts.

Response to the program was overwhelming. We had agreed to train 60 people in film production, graphics and printing trades. We were deluged by more than 300 applications. After

Iran's new audiovisual center in Tehran.

## Syracuse Plan to "Help Oth

careful screening, 75 applicants were admitted.

The one year of training integrated basic education in audiovisual techniques and theory taught in the classroom with practical application gained through on-the-job assignments with the Syracuse University film crew. Those 60 Iranians who satisfactorily completed the program are now in charge of producing technical and educational films and film strips.

Success of this apprentice training sparked off a second audiovisual program in Tehran in the summer of 1954, when a Syracuse University staff member taught a course in the production and utilization of audiovisual materials at the Fine Arts Ministry. To date, some 6,000 teachers and supervisors have been reached either directly or indirectly through this and similar courses.

Still another outgrowth of that first Iranian training program was an intensive one year audiovisual utilization program, given on the Syracuse University campus during 1955-56. This pioneer program, offered under the sponsorship of the International Cooperation Administration, had 23 student participants from 14 countries in the Middle and Far East, Africa and South America.

Iranians continued to build competence in the areas of film production and audiovisual administration. By 1957, the time was at hand for a shifting of operational responsibility from the

U. S. government to the government of Iran. As the final stage of our overseas project, we launched that year a program of advisory assistance to the Iranian government in developing educational motion picture production and printing arts.

We sent to Iran a staff of ten audiovisual specialists to serve as consultants on film production, printing trades, utilization and equipment maintenance. This brought the number of Syracuse audiovisual staff members who had at some time worked on the Iranian project up to thirty.

Our specialists served as advisers on the construction of the ultra modern audiovisual center in Tehran. The three-story grey marble building houses a multilith and letterpress printing establishment, a library, facilities for motion picture and film strip production and photographic work as well as offices for administrative personnel, staff writers and directors. The center's staff of forty, now the leaders of audiovisual education in Iran, were all trained by our Overseas Film Crew.

When our overseas consultants return to the U. S. next June they will be able to take pride in the fact that in a land where less than a decade ago there was no knowledge of audiovisual materials, there stands today a beautiful, fully equipped audiovisual center to serve the needs of the various ministries of the Iranian government.

"TO help teachers teach and children learn." These words from the sound track of the motion picture, *Pictures Teach at Penfield*, produced by Eastman Kodak Company in collaboration with the Penfield Central Schools, expresses the thinking of the Board of Education and the professional staff of the Penfield schools as to the purposes of their audiovisual program.

Penfield is one of several rapidly growing Rochester suburbs, with an expanding school population of approximately three thousand students. It contains three elementary schools, a junior high school and a new senior high school.

Located as it is in suburban Rochester, New York, in the heartland of the audiovisual communications industry, the community

naturally has considerable audiovisual motivation.

Faced with having to provide a new senior high school for occupancy in the fall of 1958, Mr. Elmer Peck, Supervising Principal of the Penfield Central Schools, recommended to his Board of Education in 1955 that it set up some seventeen sub-committees to assist in planning the new high school. In this way Mr. Peck believed that the talents and experience of the whole community could be utilized and at the same time community understanding and support for this large financial undertaking would be developed.

The specific recommendations of the sub-committees to the Board of Education were resolved by a steering committee working closely

with the administration and the Board of Education. With this wealth of information and special talent, the architectural firm of C. Storrs Barrows & Associates of Rochester conceived the design for the Penfield Senior High School, which incorporates the most modern concepts of present day secondary education and yet is utilitarian to the ultimate.

With this background as preface, it should be observed that the audiovisual instructional materials area in the new school is designed to serve not only its own needs, but those of all the schools of the district.

As is shown in the architectural drawing accompanying this article, the audiovisual area comprises eight rooms, having these func-

ARCHITECTS ROCHESTER, NEW YORK

this entire area to a *production set* either for television or motion picture production. The audio control, located adjacent to these rooms, houses the public address console and is designed with a large monitoring window so that production in the studio areas can be directed.

The recordings library room needs no particular discussion. Records are stored in vertical shelving and arranged on the shelves by Dewey number. Recordings are circulated in the same manner as books from the library.

Providing space for the storage, distribution and production of materials was an important consideration in planning the audiovisual offices. Two rooms illustrated in the accompanying drawing and photographs provide for this. In this area filmstrips are stored on shelving designed to hold several thousand titles. The filmstrips are arranged on the shelves by Dewey number and may be quickly identified by teachers and students and previewed at preview stations provided in the counter. Drawers and cupboards serve for the storage of spare lamps and other appropriate materials.

Production of materials is provided for in these rooms with cameras and other production facilities. However, it is important to observe here that darkroom facilities are incorporated in the science area, as it was thought that photography was a proper function of science teaching. The darkroom is available to all teachers for the production of materials.

In planning for the most effective utilization of materials, each classroom and laboratory was equipped with its own wall screen, and all classrooms were equipped with audiovisual venetian blinds. By using blinds, provision was made not only for darkening but also for light control.

During the construction of the new high school, problems developed which were not foreseen in the planning stages. For example, in many modern schools wall and ceiling construction is such that adequate support ordinarily is not provided for wall and ceiling type screens. Fortunately, this situation was observed in time, so that spe-

tions.

The audiovisual office is the administrative center for audiovisual instructional materials for the school district. It is here that routine detail is handled; film bookings for example. Here also, professional literature, catalogs of materials, new recordings and so on are displayed. And it is in this office that teachers confer with the audiovisual coordinator in relation to all matters concerning procurement and use.

Leading from the office are the following rooms: a preview and screening room, an audio control room, an audio studio, a recordings storage room, and two rooms serving to house a filmstrip library and for the production of materials. Between the library and the audio-

visual area is a conference room, which is used also for individual listening to both tape and disc recordings.

The preview and screening room is designed to accommodate small groups for preview and workshop purposes. Straight down Kleigl lighting strips fall upon folding lecture chairs, enabling note-taking during the projection of pictures. Remote control of apparatus is provided through floor conduits from the front to the back of the room; speaker lines run from the front to the back of the room in comparable floor conduits.

You will note on the drawing that separating the screening and preview room from the audio studio is a large modern folding door. The idea here is to adapt

cial supports could be installed in the ceiling to give the necessary strength. Here too, is an interesting installation feature. Screens were mounted eighteen inches from the end wall at the front of the classroom, enabling the teacher using overhead projection to pull the screen down at an angle to a small hook fixed in the chalk tray, thus correcting keystoneing.

Another construction problem was corridor lighting shining into the classrooms through door and transom windows. Correction of this condition is under study.

In conclusion, these factors are of paramount importance for consideration in planning new schools for effective audiovisual utilization.

1. *Room Darkening*, regardless of what kind, blinds, drapes, or what-have-you, should be studied in detail in order that windows are of such a kind and construction that they adapt with a minimum of re-engineering to the installation of blinds. Ceilings should be of such a construction that they will provide support for draperies.

2. *Corridor Lighting*. Many schools are being constructed with large glass areas in doors and transoms and in windows over lockers. This practice should be watched for and discouraged.

3. *Wall and Ceiling Screens*. Modern school construction is of such a kind that adequate support for them needs to be incorporated in the planning stages of a building program.

As all audiovisual people know, there are countless other considerations in providing for effective utilization in our schools. The ones mentioned here developed through the concern of the people of Penfield in their efforts to provide an audiovisual center that would "help teachers teach and children learn."

(Above) Teachers and students may preview and study filmstrips in the Distribution Center.

(Center) Display rack in Audio Visual Office brings new recordings to attention of teachers.

(Left) Record players are located in the conference room serving both the library and the audio visual department.

"I ALREADY know more about audiovisual aids than I use," comments a teacher. Most teachers do know more about audiovisual resources and procedures than they utilize in their daily work. Is this the usual gap between theory and practice, or are there other improvable conditions that intervene? Four major obstacles and suggestions for their elimination are given.

*Obstacle No. I: Teacher Attitudes.*

A. A teacher's philosophy or concept of method may result in a brand of teaching which does not call for audiovisual procedures. A superficial concept of how students learn may preclude the utilization of sensory experiences. Audiovisual procedures may be tacked on or used to satisfy an instructional check list instead of being an integral part of a modern teaching method. The problem for the teacher is not "Why don't I use more audiovisual procedures?" but "Why don't I want or need to use audiovisual procedures?"

B. A negative attitude toward long-range planning results in opportunistic teaching which makes it impossible for the teacher to plan and develop a semester audiovisual schedule.

C. A reluctance to evaluate the effectiveness of audiovisual procedures may result in the repetition of ineffective lessons or the dropping of sound but unproven procedures.

D. A failure to understand the importance of timing in utilizing audiovisual resources may negate their effectiveness. An effective resource is a sharp, specific, and timely instrument which depends on the teachable moment. Effectiveness may depend as much on the psychological impact as on the logical and sequential presentation. Judgment and insight plus sacrifice in effort and planning are necessary to achieve perfect timing. Often the teacher himself is the only person who realizes this and he may find himself at loggerheads with co-workers, clerks, custodians, administrators, and audiovisual service personnel.

E. A feeling that audiovisual resources are all right for another grade level or subject, but not for me, is responsible for the omission of these procedures in certain grades or subject areas.

F. An unwillingness to engage in cooperative planning and development of audiovisual resources with other teachers on the same grade level or in the same subject

## Facing

# OBSTACLES

## in the use of audiovisuals

by Edwin J. Swineford

Santa Barbara College, Goleta, California

area prevents their systematic acquisition and development.

G. A tendency of teachers to hold back or short-cut the sensory experiences of students interferes with the effectiveness of audiovisual procedures. Even after a teacher has planned and secured them there is a tendency for him to cut back on their utilization, justifying this appalling act of hari-kari on the grounds that "there wasn't enough time," or "the class got restless."

H. A failure to refine and sharpen audiovisual tools may blunt their effectiveness. Smart framing, clever captions, copious color, neat lettering, challenging previews, clever packaging, and sparkling dialogues will vitalize an otherwise drab or out-of-date resource, and insure its more effective utilization. Consumers expect this in our TV age. Yes, this is teaching.

I. A tendency to use one audiovisual resource (a slide film) by itself instead of combining several (a slide film and a magnetic recording) limits the effectiveness.

J. An "upside down" approach to audiovisual instruction reduces the effectiveness of many teachers. Instead of starting with the objectives and developing the audiovisual resources needed, the followers of the "upside down" approach start with their own narrow supply of resources and, in true Procrustean form, bend the course around them.

*Obstacle No. II: The Quality and Variety of Experiences Provided in the Teacher's Audiovisual Course.*

The quality and variety of experiences in audiovisual resources experienced by the teacher in professional courses are another factor which affects the utilization of audiovisual procedures in teaching. Whether achieved as a separate course or integrated with other teaching procedures, the teacher

needs to have a personal and direct first-hand experience in manipulating and operating the equipment.

*Obstacle No. III: Administrative Provisions for Audiovisual Resources.*

The utilization of audiovisual resources may be bottle-necked because of slag in the administrative channels. Increases in demand because of staff expansions or a variety of resources has placed a heavy burden on the administrative organization. Previewing of materials by teachers is in many places only an ideal. A notice that it is too early to book certain materials may be followed in a few days with the comment "previously booked." Little or no provision for housing or storing materials is a constant irritation, particularly when a teacher must use several rooms. Coordination is needed to prevent teachers from ordering the same materials at the same time.

*Obstacle No. IV: Emotional Reactions of Teachers to Audiovisual Equipment.*

Many teachers have developed an emotional reaction to audiovisual equipment as a result of traumatic experiences suffered while using the equipment before large and unruly classes. Teachers are told that audiovisual is not as complicated as a sewing machine. However, they do not sew on a different machine each time, nor do they do it while attempting a dozen other things at the same time. With some exceptions, few teachers have the opportunity to become familiar with the equipment before they actually use it. It is a monster which may turn on them at any minute, usually when it hurts most.

Four major obstacles faced by teachers in utilizing audiovisual resources have been presented. All may be overcome and eliminated through the combined efforts of classroom teachers, college instructors, and school administrators.

**Dr. Roman Vishniac, noted photomicroscopist (right), with Robert M. Young of HORIZONS OF SCIENCE, during production of HORIZONS OF SCIENCE film on the life and behavior of microscopic one-celled animals, for release in 1959.**

SOME eighteen months ago a group of professional motion picture people with very successful backgrounds in making public affairs films got together to plan a new series of films for schools. This unusual program, "Horizons of Science," is going into national distribution this month (January, 1959), and will be available to schools throughout the country as quickly as arrangements can be worked out.

"Horizons of Science" is a considerable departure in concept and content from any previous film series. As distinct from *curriculum* films, "Horizons of Science" aims at more general objectives — to increase the understanding and awareness of science and scientists in the world today and to stimulate interest and intellectual curiosity about science — both among those students who may be the scientists and technicians of the future; and those who will be tomorrow's businessmen, artists, housewives, industrial employees, Congressmen and voters.

The "Horizons of Science" films can hardly avoid — nor do they wish to avoid — doing some good teaching. But they are not teach-

ing films as such. They are reports from the world of science, and the men and women of science — direct to the students in the schools.

The subject of each film is one significant activity, project or research program that is going on in science. We learn about it, in the first person, from the scientist or scientists directly responsible for it. Ten such reports a year at roughly four-week intervals, will be forthcoming in this and future years.

As a new departure, the program has sought new means of distribution through the assistance of business, industry and foundations who are purchasing the program for presentation free of cost to school systems.

In the early stages of this series, its Executive Producer, Alfred Butterfield, came to us at Educational Testing Service to ask our advice on evaluation procedures. Here at ETS we have long been interested in films, television and other audiovisual media, not only because of the opportunities they offer for better education in general, but also because of their many unexplored applications in testing, guidance and other areas

with which we are primarily concerned.

We felt that the "Horizons of Science" group had an extremely stimulating and important idea, and were fully competent to bring it to life. We also saw an opportunity to learn more about films ourselves and were glad to offer what assistance we could.

The first step was to help set up "Horizons of Science" on a non-profit basis, and to serve as administrators of an initial grant made by the National Science Foundation. ETS is also collaborating in preparation of the Teacher's Guides and other study materials to accompany the films, and has worked with the distinguished Board of Advisers of "Horizons of Science" which includes the following:

*Lincoln Barnett*—author of "The Universe and Dr. Einstein," "The World We Live In," etc.

*Robert H. Carleton*—executive Secretary, National Science Teachers Association

*Donald F. Hornig*—Chairman, Department of Chemistry, Princeton University

*Neal E. Miller*—James Rowland Angell Professor of Psychology, Yale University

*Kenneth E. Vordenberg*—Supervisor of High School Science, Cincinnati, Ohio

*S. S. Wilks*—Professor of Mathematics, Princeton University

*Jerrold R. Zacharias*—Professor of Physics, Massachusetts Institute of Technology; Chairman, Physical Science Study Committee

Perhaps most important, a continuing program for the evaluation of the films has been set up. Three of the issues planned for 1959 have been previewed in semi-final form by student audiences, totalling about 3,000, in ten different schools in Cincinnati, Milwaukee, New York City, Princeton, New Jersey, Nyack, New York, and Weston, Connecticut. So far as we know, no comparable film program has had the benefit of such pre-release evaluation procedures.

The three issues which have been previewed are as follows: "The Worlds of Dr. Vishniac," a study of life and behavior of microscopic one-celled animals through the eyes of Roman Vishniac, the great photomicroscopist. "Visual Perception," a vivid demonstration of the assumptions we make when we "see" the world around us. "Exploring the Edge of

pace," a report on the development of the plastic balloon systems which have carried man to the threshold of space.

Following the showings of these films, students have been asked to fill out detailed test-questionnaires designed to reveal a) their general reactions to the film as a whole, b) their grasp of the ideas in the film, and c) the parts of the film they liked best — and least.

The percentage of students in the various groups who "recommend that this movie be shown to students in other schools like ours" varied from 92 to 100 percent with an average value of 98 percent. More than half the students strongly recommended such showings.

About 90 percent of the students said they would like to see the same movie again in science class so that they could discuss it. We regard this as particularly significant because it very completely supports our opinion that the best use of the program is a first showing for general appreciation to the entire student body of a school, followed by second and third screenings, sooner or later during the school year, for full discussions of the ideas and information in the films.

As a severe test of the students' attitudes toward the film they had seen, they were asked: "Would you object if you were required to see a similar movie next month outside of school time?" Less than 20 percent said they would object and less than 5 percent said they would strongly object.

The older and more academically advanced students scored higher on the "content" questions, of course, than their juniors, but in general *all* the young people questioned seemed to retain a large amount of knowledge. This has been true despite a conscious refusal to proscribe or censor difficult concepts or difficult vocabulary when either seems called for in the films.

In general, the sequences in the films that we have liked least ourselves have been liked least by the best audiences — and vice versa. Interestingly enough, this seems to have little to do with the intellectual difficulty or, conversely, the "entertainment" factors in a given sequence.

In some schools, in order to gain a sense of the dynamics involved in moving ideas from the screen to the student's mind, detailed

## New films present

# "Horizons of Science"

by *Henry Chauncey*

President, Educational Testing Service

classroom' discussions of the film topics were led by the teachers and were recorded on tape. These discussions have afforded valuable and at times startling insights. In one of the films it was anticipated that young students would have some difficulty in understanding the scientist because of his heavy European accent, and it was assumed that in the final edition of the film some provision would have to be made for this difficulty. Classroom discussions revealed, however, that for the students the

accent became "easier to understand after you listen awhile," and that to them it was "important to hear the scientist's own words."

Though some of us had doubts about the extensive use of this narration, feeling that young audiences might squirm, whisper, or even laugh, we have yet to find any indication of anything other than serious attention. One "Horizons of Science" staff member has been led to the (untested) conclusion that "children are smarter than people!"

**A**T a time when schools are expanding their audiovisual programs, it is well to take a long, hard look at maintenance practices for costly equipment. The next five years will see tremendous growth of investment in equipment designed to bring sight and sound into the classroom; the annual output of motion pictures and other audiovisual presentations for school use will undoubtedly keep pace. Part of this predicted growth is due to the enactment by the Federal Government of Public Law 85-864, "The National Defense Education Act of 1958," which specifically provides funds for the purchase of audiovisual equipment and improvement of such facilities in schools.

Why? Someone, somewhere along the line has failed his responsibility—to the teacher, students and community. The magic moment is gone, never to be recaptured. To say that "all machines break down at the least expected time" is not enough. It is quite impossible to explain that the projector lamp has burned out; that *all* projector lamps burn out sooner or later, and "we were only trying to save money by using this one past its normal life."

The school that has invested hard-to-come-by taxpayer dollars in audiovisual equipment owes it to itself—and to its students and supporters—to inaugurate a program of preventive maintenance. To fail to do so is to court disaster.

directly responsible for equipment can double check their own maintenance programs:

1. Buy equipment that is capable of giving top performance. It is invariably more economical to specify heavy-duty gear where constant use is likely to cause wear to moving parts. Quite often the lowest priced, or "special model" proves to be the costliest piece of equipment in the long run.

2. Install equipment properly. Where the equipment is in disuse, there is little excuse for proposed electrical connections. One school system found that its projector maintenance bill could be cut in half by providing for "utilized" dollies built in the school shop. When each projector is

This article is reprinted through the courtesy of THE APERTURE, publication of The Calvin Company, Kansas City, Missouri. The Author, Edgar Parsons, is president of Sight & Sound Inc., Washington, D. C. film consultant service.

**AUTHOR'S NOTE:** No attempt has been made here to describe in detail the various types of audiovisual equipment used

in schools, and it is intended to imply that any particular type requires more than ordinary care. All manufacturers imply or state their guarantees that their equipment will perform according to specifications WHEN HANDLED AND OPERATED ACCORDING TO DIRECTIONS. No more care is expected of any piece of mechanical or electrical equipment.

One of the costliest—and most embarrassing—phases of any school audiovisual program is the failure of equipment to behave as the manufacturer intended. This aspect accounts for countless "embarrassing moments" when classes are assembled and keyed up to see a motion picture or sound slide film which illustrates a point in a course of study. Suddenly, for no apparent reason, the room goes dark, the screen image vanishes, and a buzz of conversation sounds throughout the room.

When teachers are plagued by equipment failure, they lose their enthusiasm for use of valuable classroom tools. And when audiovisual programs lag through lack of enthusiasm on the part of teachers, a chain reaction sets in that is damaging to the entire concept of up-to-date instruction through use of the graphic illustration.

The following checklist is for everyone concerned with effective utilization of audiovisual facilities, and provides a "road map" through which school officials and those

rolled from classroom to classroom the entire "package" was composed on a specially designed rolling cart. All connections between external speaker and projector remained in place, and the operator had only to insert a heavy-duty electrical plug into the room outlet, uncoil the speaker cord and start the machine. Indeed, the picture could even be threaded ahead of the Such portable projector stands are now on the market but many schools still require students to lug the projector, speaker and

by *Edgar Parsons*

om place to place, assembling  
e units at the point of use.  
here films are shown in a per-  
nent projection room, projec-  
rs should be permanently  
ounted in a separate booth.

3. Buy equipment for a specific  
urpose and limit its use to that  
urpose. One of the major causes  
equipment failure is the use of  
quipment in a manner not in-  
ded by the manufacturer. As an  
 adjunct to this suggestion, buy  
ough of the right kind of equip-  
ent to carry out the assignment.  
any school systems find it ex-  
edient to install automatic film  
pection equipment, for exam-  
e, where central storage and dis-  
tribution of prints is regular pro-  
ure. Thus each print is carefully  
eamed and inspected before being  
eculated to the next booking.

4. Place a competent individual  
in charge of maintaining and op-  
erating all equipment. Obviously,  
in a large school system it is highly  
impractical to send an adult op-  
erator along with each movie; but  
student operators should be in-  
tensely trained to become highly  
skilled. Conduct a thorough course  
of instruction for student operators,  
including plenty of practice in such  
simple techniques as changing pro-  
jector lamps.

5. Put maintenance on a sched-  
ule; keep records of operating time  
for each piece of equipment, to-  
gether with notations when it is  
revised or repaired. Know the  
probable life of expendable parts  
and replace them *before* they fail.

6. Where in-school technical  
maintenance is impractical, con-  
tact with an outside audiovisual  
service organization for regular  
service. Submit each piece of equip-  
ment to periodic checkups by a  
technically qualified shop, even  
where day-to-day maintenance is  
handled internally.

7. Equip the school with ade-  
quate maintenance tools and test-  
ing devices, and give school em-  
ployees the time and facilities to  
do the job properly.

8. Maintain a stock of expend-  
able replacement parts on per-  
petual inventory.

9. Engage a qualified consultant

to review the operation of the  
audiovisual department from time  
to time. His recommendations for  
improvement may carry more  
weight than those of salaried per-  
sonnel!

10. Insist on high standards of  
performance in all phases of audio-  
visual instruction. Nothing is so  
damaging to the audiovisual pro-  
gram as sub-standard performance.  
Where a central unit makes its own  
audiovisual tools, ranging from  
flannel boards to complete motion  
picture films, be sure the product  
is better than comparable materi-  
als purchased ready made. The  
field of motion picture production  
is a separate subject, but a word of  
caution is in order here. Many  
schools do make movies, either with  
student aid or handled entirely by  
the instructional staff. Poor quality  
in picture or sound, inexpert edit-  
ing and other common faults are  
doubly apparent in the "home-  
made" motion picture. Seek the  
counsel of professional film-makers  
in one or several phases of produc-  
tion, just to be certain the result  
is thoroughly professional. Such ad-  
vice can frequently be had from  
"friends of the school" for little or  
no fee; whatever the cost, it is a  
wise investment.

11. Put the audiovisual program  
on a business basis and be able to  
justify each item of cost. Alert cit-  
izens are taking a dim view these  
days of wasteful practices, and the  
audiovisual program is frequently  
the target of economy-minded  
budget slashers. For the audio-  
visual director, a course in account-  
ing may be the salvation of his  
program; in any event, he must  
know where the money is going,  
and for what purpose. Where it  
can be shown that "do-it-yourself"  
practices are saving substantial  
sums of money for the school sys-  
tem, there is little doubt of the  
continuance of the program.

12. Subscribe to magazines and  
information services that keep  
school personnel informed about  
new methods and equipment. In  
addition to the usual technical  
journals dealing with audiovisual  
practices, such periodicals as *Pop-  
ular Mechanics*, *Popular Science*

and *Mechanix Illustrated* frequent-  
ly contain ideas for the do-it-your-  
self addict.

13. Recognize the fact that all  
machines are subject to breakdown  
at times. Be patient with delays  
due to breakdowns, but learn *why*  
failure occurs, and take corrective  
steps against recurrence.

14. Keep the shop and working  
areas meticulously clean. Dirt is  
probably the most formidable  
enemy of precision machines and  
film. Insist on neatness in all em-  
ployees. Be sure they wear gloves  
when handling film (other than  
routine threading for projection.)

15. Have adequate storage facil-  
ities for tools, equipment and acces-  
sories, and see that everything is in  
its proper place when not actually  
in use. Study the procedures for  
handling prints and equipment and  
see that efficient use is made of  
space, and that inspection and  
handling tools are where they are  
most easily reached. One school  
makes a practice of keeping repair  
tools on another floor, away from  
the audiovisual department. Re-  
sult? the tools are almost never  
returned to their "proper" place,  
and since there is no real place  
for them in the department they  
lie scattered around on desks and  
tables most of the time. Conven-  
ience is often the key to efficiency  
of operation; audiovisual people  
could well take a tip from the as-  
sembly line operations of industry,  
where each lost motion means  
added production cost.

While these suggestions are in-  
tended primarily for the central  
audiovisual department in a good-  
sized school, they apply nonethe-  
less to the single school which may  
own only a projector, a tape re-  
corder and assorted flannel boards.  
Bear in mind that one projector  
lamp can burn out as quickly as  
forty; if a replacement is not on  
hand immediately — and someone  
who knows how to replace it — fail-  
ure results. Yet too often equip-  
ment in schools is neglected.

Proper maintenance is not only  
the keystone of instructional effi-  
ciency; it may well be the answer  
to continued success and expansion  
of the audiovisual program.

# EQUIPMENT FAILURE!

# MICROPHONE HOIST

by *Richard B. Lewis*, Head, Division of Audio-Visual Services, and *Ray A. Litke*, Coordinator, Audio-Visual Technical Services, San Jose State College, California

**A** HANGING microphone is a desirable feature for many school or college auditoriums, theatres, and concert halls. However, mechanisms for raising and lowering a hanging "mike" are not generally available at a reasonable cost. At San Jose State College, with a new Concert Hall fully equipped with top quality recording facilities, a hoist seemed essential, especially since the open platform stage and high ceiling with no proscenium complicated any hanging microphone installation.

In the attic the microphone hoist is a simple, trouble-free unit. The B&H projector motor can be set for either 16 or 24 frame operation; the slower speed draws less attention to microphone movement in the auditorium.

The dust tight control box contains wiring blocks, transformers, relays, and duplicate control switches for testing and adjustment. Mercury switches and a geared radio dial make a reliable limit switch for both up and down operation.

And we wanted to avoid the usual large boom stands that clutter the performance area.

Less than fifty dollars gave the college a microphone hoist that has operated for four years with a service call. The Audio-Visual Service Center staff constructed and installed the unit. First, a working model was made of a spool and a 1.5 volt reversible motor to determine basic design. From then on it was a search for parts and some relatively easy construction brought the project to completion in a few days.

The microphone, a low impedance omnidirectional dynamic of very high quality, hangs from its own cable directly over the conductor's podium position, and any height selected to meet performance requirements. The cable passes through a small hole in the ceiling, just above the hole, the cable runs over a pulley made of an edge-grooved disc of wood. Masonite sides to provide support; this pulley is mounted on a bolt through a wood bracket; bearing point is lubricated with paraffin.

From the pulley, the cable passes upward to a double drum mechanism constructed of three discs of plywood with a core of wood slats sandwiched between them. The core is smooth; the core is about one inch in diameter providing a satisfactory radius for the cable wind. The cable to the microphone is on one section of the double drum, and the other section of the drum where the amount of cable equal to the microphone drop distance is wound on the core. The end of the cable is terminated in a standard microphone plug and jack. As the microphone is raised, its cable section winds on its portion of the drum, while the cable on the other section of the drum is unwound into a plywood box below the mechanism; the reverse occurs—the microphone cable is unwound from the core.

The microphone is now in position to balance piano and orchestra. The recording engineer in the booth (left rear window) controls its position between selections. Photos by Orville Goldner.

and the cable in the box winds into the drum.

Two suggestions here for any building such a unit: first, the angles of the drum are much larger than necessary, and, second, the drum shown could be made of much lighter material. These modifications would reduce the inertia of the drum and lighten the load on the motor.

The motor is a war-surplus Bell and Howell projector mechanism, stripped of all parts except the motor and gearing. Any reversing motor of adequate power could be used. A gear was silver soldered on the sprocket wheel shaft, and another gear in appropriate ratio was mounted on the shaft attached to the drum. Chain appropriate for the sprockets drives the drum.

In the control room of the Concert Hall a wall panel contains a locking spdt switch, a spst switch, and a jack. The spdt switch controls a 24-volt relay which starts the motor for either up or down movement of the microphone. The jack permits plugging in a remote switch on an

extension cord for use at the console 6 feet away. The spst switch provides off-on control for a relay provided to activate a power supply in the attic for certain types of microphones when required. All power switching, therefore, is done by relays in the control box in the attic over the stage; low-voltage wire, multiple conductor and rubber-covered, conducts control current to the relays from the control room; no conduit for this circuit was required. If, however, conduit had been available, a 120-volt switching circuit would have eliminated the relay system and simplified installation.

The relays — also surplus — have 120 volt contacts and coils operate on 24 volts A.C. These are wired appropriately to energize the reversing and off-on switch of the projector motor. The unit is lused. On the top of the electrical component box control switches are duplicated to facilitate servicing and adjusting the unit.

Especially important is the limit-switch system. A surplus geared radio dial unit was attached to the

shaft of the drum; to it, two mercury switches, such as are used in furnace controls, were mounted in fuse clips on a piece of brass strap. As the gear is turned by the drum, the switches are tilted. One is in the forward circuit, one in the reverse. When the motor runs forward — microphone down — the forward circuit is broken when the microphone reaches its lowest level; the reverse circuit mercury switch is in the "on" position where it remains until the microphone is raised to its top limit, when this switch breaks the "up" circuit. Incidentally, gear drag in the mechanism is sufficient to eliminate need for a brake system, and since a motor line filter is used there is no pick-up of noise from the motor, relays, or switches.

So, in our Concert Hall the microphone can be set at any elevation appropriate for each number in a program: the console operator just touches the switch. Further, after performances, the microphone is withdrawn into the attic, out of sight, and in a relatively clean storage place, a round tube.

The Mad Hatter warns Dr. Linguistics (Dr. Frank Baxter) of the conspiracy.

ON MONDAY, January 26, at 7:30 PM (EST), television viewers will see an ingenious plot to murder the alphabet—and indeed all language. “The Alphabet Conspiracy,” produced in color and featuring live actors, animation, and filmed scientific sequences, is the latest in the Bell System Science Series of programs. In it, the conspirators (Judy, a grammar-hating school girl, the Mad Hatter, who’s against language on general principles, and the Jabberwock, who speaks a language all his own) are dissuaded by Dr. Linguistics, who leads them on a tour through the science of language.

The role of Dr. Linguistics in “The Alphabet Conspiracy” is played by Dr. Frank Baxter, and Hans Conried plays the Mad Hatter. Judy is young Cheryl Callaway, and the Jabberwock is Dolores Starr. Robert Sinclair directed the program from a script by Leo Salkin and Richard Hobson. Owen Crump was the producer.

Dr. Linguistics starts his case for language by pointing out to the three conspirators that the alphabet is only a minor target for them, because languages can and do live without alphabets.

From then until he clinches his case by showing them the simultaneous translations at the United Nations, he astounds them with fact after fact about language that they never considered:

— Language is the spoken rather than the written word, and man has been talking for at least 70 times as many years as he has been writing.

— Babies throughout the world all have a common language, and it is only by imitating their elders that they begin to speak separate languages.

— A talking machine that actually produced (not reproduced) human speech sounds was invented in 1780.

— In the Canary Islands people talk to each other across long distances by using a whistling language.

— A chimpanzee has been taught to speak English words.

— Dialect geographers of the United States can locate a person’s home by listening to only 30 words of his speech.

— Modern machines have been invented which actually are worked selectively by the voice, as the automatic digit recognizer that identifies spoken numbers and the voice typewriter that can type out some words spoken to it.

By the time Dr. Linguistics has finished with the conspirators, they not only give up their plot but even are amazed that they ever considered it in the first place. For language, as is pointed out at the end of the program, expresses “the needs, affections, joys, hopes, tragedy, the affirmation of faith, the

very spirit of man’s deepest nature.”

Dr. W. Freeman Twaddell, professor of linguistics at Brown University, served as principal advisor on the production of “The Alphabet Conspiracy.” Ralph Potter, retired director of transmission research of Bell Laboratories was associate advisor, and Dr. Harry Hoijer, professor of anthropology at UCLA, was consultant.

The Bell System created this series of programs to combat the widely found public apathy toward

# “The

# Alphabet Conspiracy"

science. Back in 1951 Bell first conceived the idea of trying to explain science and the work of scientists to the American people through television and film showing. The first presentation of a Science Series program to a large television audience occurred in October, 1956. To date, five programs have been produced, shown on television, and made available in 16mm film: "Our Mr. Sun," "Hemo the Magnificent," "The Strange Case of the Cosmic Rays," "The Unchained

Goddess" and "Gateways to the Mind." The first four were produced by Frank Capra; the following four are being produced by Warner Bros.

More than 125 million viewers were reached by the four original telecasts, and two repeat telecasts were viewed by 42 million people, 85 percent for the first time. Schools, also, have made enthusiastic use of the 16mm color prints which the Bell Telephone Company has made available.

(Lower left) *The Mad Hatter*, played by Hans Conried, explains his plot to destroy the alphabet to the Jabberwock (Dolores Starr) and Judy (Cheryl Callaway).

(Below) Dr. Linguistics explains children's speech patterns to the three conspirators.

# IN AUDIO-VISUAL MATERIALS FOR SPACE AGE EDUCATION

For more than 30 years Encyclopaedia Britannica Films has had but one goal—to produce the finest audio-visual materials; to make them available in the majority of our classrooms; to provide films and filmstrips that are easily accessible to all teachers.

You within the field of education have been more than loyal allies through the years in helping us build the existing great E B Film audio-visual library which is unquestionably considered to be the standard for such materials throughout the world. No further impetus than the constant encouragement and leadership of America's educators has been needed to bring E B Films to the present point of readiness.

Today E B Films—with but a portion of its many resources—can offer more than 350 films, several complete courses on film and many filmstrips in the *specific areas recently highlighted as most vital to our security under the new National Defense Education Act.*

A special catalog of all EBF films and filmstrips on science and other areas covered by the various sections of the NDE Act has been prepared for your convenience and is available upon request.

The tools to do the job are at hand. You demanded them long ago—E B Films *delivered* and will continue to do so. Fortunately, however, the NDE Act at last provides an economic climate under which America's teachers can secure audio-visual and other teaching tools even *beyond* the challenge of today's crisis in "Space Age" education. It rests with every individual and segment within the structure of American education to make the most of our new opportunity.

## early movies reproduced from paper prints!

by making paper contact prints from their 35mm negatives and depositing these prints in the Copyright Office in the Library of Congress, with applications for registration of their claims for copyright protection. This practice was followed until 1912, when the copyright law was amended to provide for the registration of claims for motion pictures as such.

For as many as 64 years these paper prints have been stored in the Library. The original films themselves were on nitrate stock and most of them have disintegrated or been lost, burned or otherwise destroyed, so these paper prints are in many cases unique copies of the originals.

The Library of Congress has long been aware of the importance of these motion pictures, both from an historic standpoint and as cultural documents concerned with the social history of the nation. As long as twelve years ago, experiments were under way to determine practical means of reconvertng the paper prints to new 16mm negatives, for under the copyright laws, upon expiration of the copyrights, the particular works involved fall into public domain and are available for anyone to use. These experiments proved successful in 1953. Under the sponsorship of the Academy of Motion Picture Arts and Sciences 16mm negatives were produced which the Library of Congress felt to be of good quality, and during the intervening years about half the 3500 titles, and about one-third of the footage in the paper print collection have been copied, and prints are in the Academy in Hollywood and in the Library in Washington, for reference screening by persons in serious research. However, these 16mm copies may not be duplicated nor are they loaned or circulated! But

any qualified individual or organization, upon getting the approval of the Library of Congress, and providing the necessary insurance coverage, may himself attempt to copy these 35mm paper originals for his purpose.

Several years ago the Blackhawk Film Company, working with the father and son team of film printers, David H. Bonine, Sr. and Jr., succeeded in making copies from the 35mm paper prints. They ran into considerable difficulty, due to the fact that the old prints are on varying types of stock and many are in bad condition. But this worthy project is the first of its kind, along with CBS television, to make available 8 and 16mm prints to the public, where these films can provide invaluable historical documentation as well as great enjoyment.

Blackhawk Films, 1235 West 5th Street, Davenport, Iowa, will supply these films on loan without charge for telecasting in any factual program, as long as credit is given the company and the Library of Congress. Also, 16mm prints are available on request for previewing. At present, the following films are available: *Famous Trains of Western Railroads, 1897-1903* (Edison-Biograph); *The Georgetown Loop* (Biograph, 1903); and *The Hold-up of the Rocky Mountain Express* (Biograph, 1905).

Among the films currently in preparation are: *Teddy Roosevelt and the Rough Riders* (Edison-Biograph, 1898-1899); *The Pennsylvania Railroad in the 1890's* (Edison); *The Building of the Panama Canal* (Edison); *The Klondike Gold Rush* (Edison, 1897-1901); *Louisiana Purchase Exposition, St. Louis, 1904* (Edison); *Engine 999* (Lubin, 1909); *The Automobile Race for the Vanderbilt Cup* (Biograph, 1904); *New York City in 1903* (Edison).

**W**HEN the first commercial use of motion pictures was made in the "peep shows" and penny arcades of 1894, there was no provision in the copyright law to give them copyright protection, but there was a provision for the registration of copyright claims for photographs. A number of pioneer motion picture producers — Edison, Biograph, Vitagraph, Selig and others—therefore protected their works

# Why not make your own worksheets?

## AIR PRESSURE

**Materials Needed:** One metal container with top, alcohol lamp or electric hot plate, stand, large pan with cold water, gloves with which to handle container when it is hot.

**Procedure:** Make sure that the inside of the container is clean or free from anything that could explode when heated. Remove top from container. Pour about a quarter of an inch of water in the container. Place container over heat until water boils. Remove container from heat and put top in place. Put container in water. The water quickly cools the can and air pressure does the rest.

**Purposes:** To help children realize that the air pressing on them has great force. When air is heated it expands. As air expands it takes up more space. When air is cooled it takes up less space.

by Bruce A. Lloyd

**H**AVE you ever wanted to repeat certain science experiments each year? Have you ever had to spend a great amount of time searching for the book that described the experiment you wanted? Have you ever wanted a handy reference to a number of easy and interesting science experiments that you know your students will be anxious to perform? If you have ever faced these problems then the following may be of some assistance.

*Make your own worksheets of your favorite science experiments!* This is not as difficult as it seems. If these steps are followed it will take a minimum of teacher time.

First of all choose the experiment. Then select two or three good students to assemble the equipment and demonstrate the experiment. Photograph the equipment used and have the students who performed the experiment write on a piece of paper the materials needed, the procedure or steps and the learnings involved or outcomes expected. When the students have completed the written work

paste the picture on the paper and file the paper for future use. Easy, isn't it?

The learnings involved seem rather obvious, but should still be emphasized. In almost every classroom there are, fortunately, several students with great ability. They are the ones who complete their work before the others and have the time to devote to extra learning situations. These are the students who should be chosen to participate in this activity. Usually all that such students need is the text book describing the experiment and a deadline.

Let these students obtain the materials and equipment needed for the experiment. Tell them that the experiment is theirs to perform and explain to the class. When all is ready you the teacher, or a student, should photograph the materials displayed. It may also be necessary to photograph several steps in the procedure, but that depends upon the experiment. If only one photograph is needed to explain the experiment take the picture and then have the bright students perform

the experiment. Upon completion of the experiment have the students begin to write the worksheet.

The worksheet itself could easily be written on a piece of notebook paper. Just make certain that the students leave room on the sheet for the picture to be mounted. The worksheet should contain a list of the materials and equipment needed to perform the experiment. It should also contain specific directions to be followed by those who will perform the experiment in the future. There should be mention made of the learnings involved in the experiment or the concepts to be obtained. Finally the picture itself should be pasted on, because a picture, properly done, can explain so much more than many pages of text.

It is suggested that students do this because they can learn much from participating in this type of activity. Furthermore, the teacher is free to work with the other students.

This has been done with considerable success in other school systems. Why don't you try it?

## ISRAEL—AN ADVENTURE

(Tribune Films, Inc., 141 East 44th Street, New York 17, New York) 28 minutes, 16mm, sound, color. For free use, apply to Tribune Films, Inc. and for purchase information apply to the Israel Office of Information, 11 East 70th Street, New York 21, New York.

### Description

Here is a film that is neither a travelogue nor a political record. Instead, one finds a cultural character sketch that is rich in historical overtones. The side-by-side existence of the ancient and the modern in Israel is the theme of this film. It is even carried over into the musical score where flute and vibraharp are orchestrally married by composer-producer Nathan Kroll to a tune of ageless folk flavor.

The slow pace and Arab ways of the old city of Acre are contrasted with the hustle of the modern industrial city of Haifa across the bay. Near the sea of Galilee, girl sailors of the Israeli Navy explore the catacombs of Beyt Shearim, historical seat of the Sanhedrin, to find inscribed there the ancient symbols of Judaism and potsherds that could be Phoenician, Canaanite, or Byzantine. The archeologists at the new Hebrew University in Jerusalem help piece together the history of the land by identifying their finds as Grecian, Roman, and Cretan.

One sees religious worship in several of Jerusalem's churches—Roman, Abyssinian, Russian, and Greek. Then there are the scribes and proofreaders of the Torah, who were the first to revere Jerusalem as holy. In modern Tel-Aviv, the Inbal Ballet group gives a dance interpretation of an ancient Yemenite wedding ceremony. The construction of a power plant in a desert for a port city yet to be built signifies the "practical dream" of tomorrow's Israel.

### Appraisal

In the high school curriculum the film will find its most obvious correlation with the content of world history courses. Sunday school and church

groups of almost every denomination will find that the film gives new meaning to whatever concepts they presently hold regarding the "Holy Land." Certainly they would gain in understanding Israel's modern configuration. *Israel—An Adventure* is much more than places and people, facts and understandings. It is an aesthetic experience which qualifies it very highly for use on high school convocation and film society programs. Alexander Hammid and Franta G. Herman, who photographed, directed and edited the film, are able to sustain moods of mystery, so that in every scene the viewer experiences a moment of discovery. A subtle element of suspense is provided by Christopher Plummer's expert reading of Allan Sloane's restrained and poetic commentary. Film critics will be charmed by the visual poetry of the fugitive playground ball that rolls and bounces down the inhabited slopes of Carmel and through the city of Haifa to be reclaimed by a new group of children. This sequence will remind some of the *Red Balloon*, others of *People Along the Mississippi*. For the sophisticated, *Israel—An Adventure* will be unforgettable.

—Ledford Carter

## GATEWAYS TO THE MIND—

### THE STORY OF THE HUMAN SENSES

(Produced for Bell System.) 60 minutes, 16mm, sound, color, 1958. Apply to your nearest Bell Telephone System office for use. Teacher's guide and student's guide are available.

### Description

This film, the fifth in the Bell System Science series, uses animated figures, diagrammatical drawings, live action, and documented film footage to dramatize what happens when we hear, see, smell, taste and feel. Dr. Frank Baxter, in a Hollywood sound stage setting acts as narrator and guide.

Opening scenes depict a discussion between Aristotle and several of his students concerning the five human senses but Dr. Baxter corrects them by stating that one has many more than five senses which work together rather than independently. The film continues by showing Gene, the animator, as he describes the drawings of characters he has made to represent five of the senses.

Next, Dr. Baxter explains that the

senses are like dispatchers that send information through the network of the sensory system. Animated drawings show the sense of touch character dispatching a message and the outline of man's nervous system is shown in a silhouette.

The film goes on by explaining that nerve fibers carry signals by electricity. Luigi Galvani's experiment with "animal electricity" is briefly explained, then the film presents an actual recording of electrical impulses going from a living eye to a living brain. The impulses jumping from cell to cell are shown by animation.

Continuing, the film treats the problem of how the brain transforms the impulses it receives into action, sensation, and thought. An animated character representing the thinking part of Joe's brain reacts to stimuli flashed on the brain's master screen and flips switches to trigger the proper physical responses.

The film returns to Dr. Baxter who points out that *stimulus* is the key word. He illustrates this by projecting a film which shows animals—from the one-celled Protozoa to man—responding to stimuli. He tells that each living thing develops senses according to its needs, with man alone possessing a brain with a capacity for imagination, thought, speech, reasoning, planning, and storing knowledge.

The next sequence describes and shows by drawings the parts of the ear and traces the influence of the sound-wave stimuli from the outer ear to the brain pattern formed. Dr. Baxter switches on tape recordings of impulses from the optic nerve, taste buds, and others and calls attention to the fact that they are all the same.

Dr. Baxter continues by explaining that taste is actually four senses; it seems like more because one smells things as they are tasted. Also, the thermal senses are in the mouth.

By diagrammatical drawings, the film then shows the path of the molecules which are smelled to the cell filaments on the olfactory patch which send electrical impulses over nerve fibers to the brain.

Next, the film compares the parts of the eye to those of a camera, shows a close-up view of the external human eye and points out the blind spot on the retina. In a diagrammatic side view of the human eye, the film shows

the path of light through the cornea, through the lens, and finally its focusing on the retina. After the fovea is pointed out, the functioning of the rods and cones is explained as they are shown in a drawing. This sequence concludes by showing that pigments can be extracted from the retina in the laboratory.

Next, the film explains that the sense of touch consists of at least four other senses. Animated drawings show that when the tip of the finger touches a hot iron, the pain endings, touch, heat and cold, and pressure all send their messages, which trigger a reflex action as well as continuing to the brain. Dr. Baxter explains that the sensation of pain is important; it alerts a person when injured and helps to locate the point of injury.

The film continues using animation to show the functioning of the semi-circular canals in the inner ear, as Dr. Baxter tells how a series of sensory responses work together to help keep one's sense of balance. Also, slow-motion scenes of a cat dropped from an upside-down position show how it twists itself to land upright.

The setting for the next sequence is "under the big top," as the film tells of the senses used by the various circus performers as they do their acts. Ani-

mation shows the little man at the master receiver of the brain as he throws the switches necessary for an aerialist to accomplish the proper physical responses while swinging through the air and grasping the waiting hands of his partner.

The film now begins a presentation of evidence to substantiate the statement that the brain interprets visual images through past experiences. Trapezoidal windows that are revolving appear instead to be moving back and forth because the windows are not rectangular as one expects them to be. A distorted room looks normal making the size of boy and man in the room appear abnormal. The distorted room looks normal because it looks like what it is expected to be. Professor Hadley Cantril, who has pioneered in this research at Princeton University, explains that one acts in terms of what one has learned to expect from past experiences.

Next, the film shows Dr. Baxter demonstrating that the electroencephalograph can measure electrical impulses that reach the human brain. Then the film duplicates the McGill experiment, showing that people who were subjected to extreme and prolonged monotony by cutting off their senses from all stimuli soon developed

hallucinations. A similar result may be produced by the monotony of such tasks as truck driving and aircraft piloting. Dr. Baxter also mentions that scientists are studying such questions as what happens to men in the monotony of the Antarctic "white-out" and what is the "rapture of the deep."

The film next shows that man has extended his senses with such developments as the field-ion microscope, satellites broadcasting information, bathospheres, and stratosphere balloons. Nevertheless, regardless of how much man extends his senses, he must still depend on the ones he has always had.

Finally, the film shows that experiences brought to the brain through the senses are recorded there for a lifetime. Dr. Wilder then presents his findings when he stimulated the surface of the temporal lobe of the human brain of his patients with an electrode. Recordings of the actual words of the patients are heard as they speak of experiences that happened in the distant past. The film concludes with Dr. Baxter telling that scientists are beginning to understand the senses more and more and to realize how remarkable they are.

LOS ANGELES 25, CALIFORNIA

# OH TROUBLE TROUBLE TROUBLE TROUBLE TROUBLE TROUBLE (FIRST INSTALLMENT)

While talking to a film producer, have you noticed his tear filled eye, his depression, his slight facial tic? This is a little understood disorder known as PCN, or Production Cost Neurosis. Think back. You were probably complaining to him about your own problems, perhaps the cost of prints, the price of rentals. This you must not do. It brings on his symptoms immediately.

The malady arises from the producer's conviction that no one understands his cost problems. So: We explain costs. You develop sympathetic understanding. Neuroses disappear. Simple?

Before exploring classroom films proper, you might be interested in knowing that the big, razzle-dazzle free loan industrial films that you get usually cost the sponsor from \$30,000 to \$100,000. No PCN there. True, production costs are high. There may be three to five more crew members than listed below. Writing, shooting, editing and client relations may be interminable. However, the budget is raised accordingly and the sponsor more or less gracefully foots the bill.

Classroom films are a different story. Most of them probably cost the producer from \$4,000 to \$10,000 to make. They can cost as little as \$2,000. Few exceed \$20,000. It depends.

Let's conjure up a rough budget (with a warning that costs vary greatly depending on place and circumstances). Let's imagine a fairly complex film: 16mm color, 1 1/2 reels, four speaking parts, five days shooting in studio and on location.

writer (3 weeks).....	\$ 750.00
director (2 weeks).....	700.00
crew (1 week)	
director of photography.....	337.50
camera operator.....	225.00
sound mixer.....	270.00
sound boom operator.....	168.75
chief electrician.....	213.75
electricians (2 @ \$112.50).....	225.00
grip.....	157.50
actors (4 @ \$285.00).....	1,140.00
studio rental.....	500.00
set and location costs.....	350.00
equipment rental.....	300.00
transportation.....	100.00
raw stock (film).....	192.00
work print.....	120.00
magnetic film.....	150.00
editor (3 weeks).....	675.00
narrator.....	100.00

titles.....	75.00
miscellaneous.....	250.00
1st completed print.....	90.00
	<hr/>
	\$7,249.50
plus (let's say!) 15% overhead.....	1,087.43
	<hr/>
	\$8,336.93

How many prints does the producer have to sell before he begins to make a profit? Will the tears well up in old Sy Wexler's eyes? Will old Bob Churchill reach for the barbiturates? Don't miss the enthralling sequel in next month's issue.

No room for adv't this time.

CHURCHILL-WEXLER  
FILM PRODUCTIONS

801 N. Seward St. L.A. 38, Calif.

outstanding precedent set by the other films in the Bell System Science Series by having an interesting attention-holding treatment, accurate content, clear presentation, coupled with excellent color, sound, and acting. Dr. Frank Baxter again excellently performs his role as narrator and guide. The two broad purposes of the film may be stated as follows: (1) to present factual information concerning the senses resulting in a more understanding and deeper appreciation of the senses and motivating further study concerning them, and (2) to create a feeling of respect for the work of the scientist and consequently serve to attract students to the field of science. It appears that the film does an admirable job of fulfilling both of these purposes. Even though many of the concepts presented are difficult to visualize, the film, through animated drawings and other means, does a very good job of showing such ideas as "all knowledge is ultimately dependent on the senses"; "there are many more than five senses"; "the senses code information electrically"; and "what is perceived is dependent on past experiences." Also, the setting of the Hollywood soundstage adds interest and makes logically available various types of equipment and materials which are used to clarify certain points in the film. The casual approach, appealing visuals and personalities, slow pacing, and interesting content make the film suited to a general television audience. However, evaluators of the film agree that it also has much curriculum value. In classes, such as high school biology, health, and general science, the film would be useful in presenting certain factual information, promoting discussion, and helping to create certain attitudes. In addition it would have some use in college and university classes of biology, health, and psychology and in the elementary school as well.

— George Vuke

## PARAGUAY: A NEW FRONTIER

(Paul Hoefler Productions, 1122 Kline Street, La Jolla, California) 17 minutes, sound, color, 1957. \$150.

### Description

Narration, musical background, and actual photographic views of life in the Chaco district of Paraguay show people of many nationalities helping to bring civilization to this wild country—one of the world's last frontiers.

A film map locates the small South American country of Paraguay while the narrator points out that although Asuncion, the capital city, was settled less than fifty years after Columbus

discovered America, this region has been slow to develop because of its isolated position—its only outside contact being through the Rio Paraguay. Business and commerce center around the waterfront. On the Rio Paraguay are seen small boats from upstream docked beside large steamers from Buenos Aires loading and unloading bales of cotton, hides, oil, food, machinery, and clothing. Another map depicts a detail of Paraguay, showing how the river divides it into two regions. The western region called El Chaco is the subject of the rest of the film.

The camera pictures El Chaco as a strange wild land populated by a few scattered Indian tribes and pioneer immigrants. Saddle horses and ox carts creak across the scrubby terrain, ford shallow lagoons in the swampy areas, and furnish the only modes of transportation for people and supplies. Comparisons of life in three districts of El Chaco reveal striking differences.

In the north men are cutting down quebracho trees, loading the logs with the help of oxen onto flat cars where they will be carried on a narrow gauge railway to a sawmill near the river, unloaded, and crushed to extract the tannin.

In the heart of the territory lies the community of Filadelfia, settled in the 1930's by a group of Mennonites from Germany and the Russian Ukraine who were seeking religious freedom. Given land by the Paraguayan government, they have built houses and developed a civilization similar to that known to them in their homeland. A view of the main street shows trucks, horses, teams and wagons, people, and cows all sharing the thoroughfare. In true pioneer fashion the settlement is self-sustaining as illustrated by such scenes as a cobbler and wagon-maker at work, women doing the family wash with hand-powered machines or on washboards, and men hulling peanuts in hullers made entirely of timber from nearby forests. A glimpse is also caught of the sawmill where the lumber is cut. A visit to an experimental farm shows that cabbage, dates, castor beans, bananas, papayas and grapes as well as peanuts will grow in this area.

An airplane landing in a pasture reveals a kind of a pioneer to be an enterprising American, the owner of a large cattle ranch to which he flies often from his home is Asuncion. Activities shown of the ranch include the branding of the calves and inspection of the herd. After pointing out that two of the hazards of cattle-raising are jaguars and cattle-rustlers, the film shows steers being taken to market at Asuncion. The film closes with a view

of the vaqueroes returning to their home ranch.

#### Appraisal

This film should have wide audience appeal from the junior high school to the adult level. It is technically good and logically organized. Groups studying the problems or methods of pushing back frontiers or the geographical characteristics and economic development of Paraguay should find it helpful. Emotion is heightened through stirring music and the sound effects of the cattle lowing as they leap out of the barge and trot up the river bank at Asuncion. There is no portrayal of life in native Guarani villages; rather, a colorful picture of a not generally known way of life in Paraguay and the problems of developing a new area are presented. Some words such as "Guarani," "guarana," "vaquero," and "quebracho," which may be unfamiliar to children may need explanation. The film should prove interesting by illustrating the fact that history is not dead but is repeating itself within our own lifetime.

— Jean Holt

### THE RETURN

(American Physical Therapy Association, 1790 Broadway, New York 19, New York.) 39 minutes, 16mm, sound, black and white, 1958. \$140. Produced by MPO Productions Inc., New York.

#### Description

*The Return* is in semi-documentary dramatic form, depicting the role of the physical therapist in the rehabilitation of a paraplegic victim.

In the opening scenes, Jim Hines is involved in an automobile accident, in which he suffers almost complete paralysis of his lower limbs. Jim is told that he has some muscle return, but he will have to work very hard if he intends to walk again. Under the guidance of his physical therapist, Pat Chaney, Jim begins his exercises to develop his muscle power. Through hard work and the use of whatever muscle power he can muster, Jim learns to sit upright and eventually is able to dress himself. It is a big day for Jim when he uses his wheelchair for the first time and is able to look at people from a sitting position once more.

The confidence Jim has gained thus far seems to all but disappear when he tries to learn to crawl for the first time. Pat feels that because Jim is unable to see any improvement he has given up. His failure and refusal to try to learn to crawl causes a great deal of concern to the therapist and the other members of the staff. After a consulta-

## SYLVANIA

. . . fastest growing name in sight!

LIGHTING • RADIO • ELECTRONICS • TELEVISION • ATOMIC ENERGY

tion with the other staff members Pat receives permission to take Jim to the pool and allow him to walk between the handrails in the water. It is felt by all that this may restore Jim's confidence in himself and prove that he is making progress. In the pool Jim finds that he is able to walk, and his desire to walk under his own power is stronger than before. At the handrails in the gymnasium Jim takes his first steps. In a few short weeks he is walking with crutches. Jim's improvement and that of the other patients is discussed by the therapists on the staff. The progress of a patient is the greatest reward for any physical therapist. The faith that the patients, young and old, have in their therapists is payment enough.

Pat helps Jim to learn to fall from his crutches should it ever be necessary. During an exercise in which the patients gain confidence in using their crutches by hitting a large ball to each other with their crutch, Jim is thrown off balance. As he turns and starts to fall, Jim remembers what he was taught and lands in the proper manner. Jim's excellent progress has merited him the opportunity to proceed with a travel test in actual life situations which is designed to measure his ability and determine if he is ready to leave the hospital. Jim and Pat walk to the railroad station, board the train, and travel to the city. Pat records the time it takes Jim to travel the various distances and determines if he is able to handle the many situations he may encounter. Jim does well and finds that he has returned.

#### Appraisal

*The Return* is an excellent documentary film depicting the rehabilita-

tion of a paraplegic victim through the help and guidance of a physical therapist. The film is designed to be used in vocational guidance programs and will definitely stimulate a desire on the part of the viewer to seek further information about a career as a physical therapist. It may be used profitably by senior high school and college guidance counselors, in nurses training programs, and in general adult groups. Supplementary information on type and amount of training, suggested prerequisite courses, job availability, and approximate salaries will be needed. The producer intended that the film: (1) motivate young men and women to enter the profession, (2) and inform the general public about physical therapy. Through excellent casting and production techniques the film certainly should meet these objectives. The leading roles were performed with a great deal of feeling and emotion, which are transferred to the viewer. Using the facilities of the New York State Rehabilitation Hospital in West Haverstraw, New York, adds authenticity and impact. The viewer cannot help but feel a desire to want to do something for these patients. The training sequences, especially those on the mat and handrails, have tremendous power. In addition to the dramatized sequences, the viewer is given an insight into the actual work of the therapist and the rewards by the actual scenes taken at the rehabilitation hospital. Though lacking in information on the training required of a therapist, *The Return* should prove to be very effective in guidance programs and for use by general adult audiences. A 28-minute version is also available.

— Sheldon A. Goodman

# Useful Filmstrips

By IRENE F. CYPHER

Associate Professor of Education  
Dept. of Communication Arts  
New York University

The other day we happened to be observing a sixth grade class "in action." Lo and behold, the teacher used exactly seven frames of a filmstrip, then turned away from the projector and started her group on a production project which involved making transparencies for use with an overhead projector. Now that's what we call sensible utilization of a filmstrip! There were thirty-eight frames in the filmstrip, but she neither tried to hurry through the complete strip nor did she "apologize for not showing it all." She simply used what she and her pupils needed at the moment and made it a part of the normal course of work. Perhaps the day of sensible visualization techniques is approaching at long last!

## ALASKA

### TWENTIETH CENTURY FRONTIER

(Single strip, black and white; produced by Current Affairs Films, 527 Madison Ave., New York, N. Y., as a public service for the New York Journal American.) Alaska is "the topic of the hour," and interest in the 49th state runs high. This filmstrip gives a picture account of the resources, industries, living problems and future potential of this great area. By highlighting the facts and features of outstanding importance the viewer is led to see the meaning of statehood and to a consideration of what constitutes Alaska's major problem if it is to be developed. This type of filmstrip is best suited for use in a class where there will be discussion of social and economic matters. Its use will enable a teacher to focus attention on major issues and to stimulate pupil interest in current matters of national and international importance.

## AMERICAN AUTHORS

(6 strips, black and white; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.; \$18 set of 3, \$3 single strips.) Irving,

Cooper, Alcott, Holmes, Whittier and Longfellow are names that represent much to all students of American literature. These authors have contributed to the reading pleasure of many. The filmstrips (adapted from motion pictures of the same names) give us an insight into some of the events in the authors' lives and focus attention on their better known writings. In this way the strips can be used both as introduction to the people and as guides to the literary works for which they are famous. The general scope is adapted to junior and senior high school work in American literature.

## AMERICAN HISTORY SERIES

### SET NO. 2

(6 strips, color; produced by Young America Films-McGraw-Hill Text-Film Division, 330 West 42nd St., New York 36, N. Y.; \$32.50 per set.) There are many events and personalities connected with the growth and development of our country. This series deals with the major developments from 1789 to 1850. Included are the problems and policies of the new government, the place of the young nation in world affairs, growth of the western sections, industrial and agricultural expansion and social change and sectional controversy. The presentations are correlated with standard curriculum units and follow the sequence of study usually covered under the title of American History I. Interest is centered on significant problems of each period and on the people who helped to carry out the progress set up by the government and its leaders. Suited to study in grades 7 through 12.

## INSTRUMENTS OF THE SYMPHONY ORCHESTRA

(6 strips, color, with records; produced by Jam Handy Organization, 2821 E. Grand Blvd., Detroit 11, Michigan; \$51 for complete set of 6 filmstrips and 6 33-1/3 rpm records; \$8.95 for individual strips and records.)

Whether you actually play an instrument yourself, or are merely one of an audience listening to a concert, your appreciation of a symphony orchestra will be enhanced if you know something of the various instruments and how they are played. This series takes each section of a symphony orchestra—string, woodwind, brass, percussion, melodious percussion, the orchestra as a whole—and gives us the stories of the individual instruments, how they evolved, what they contribute to solo or group playing. The accompanying records, of course, enable us to hear the tonal pattern and the range of each instrument. The production is a good one and represents a happy combination of sight and sound for true teaching and learning purposes and pleasure. This is one of those instances where the producer says the set is intended for later elementary, junior and senior high school. We prefer not to give a specific grade category, for the material can well be used by any level or age group interested in music.

### J. A. COMENIUS 1592-1670

(Single strip, black and white; produced by UNESCO and available from UNESCO Publications Center, 801 Third Ave., New York 22, N. Y.; \$3.25 with manual.) Anyone interested in the use of audiovisual instructional materials will find this filmstrip valuable. It is, of course, biographical in nature, and as such gives us some of the highlights of the career and work of John Amos Comenius, the exiled Moravian pastor who had so great an influence on educational methodology. Illustrations in the filmstrip have been gathered from famous libraries in Paris and Prague and the United Nations resources. We are given a description of the famous encyclopaedia "Orbis Pictus" and of the philosophy underlying Comenius' insistence on the use of pictures to motivate children to learn. Such a filmstrip is naturally to be recommended for teacher-training groups. We see no reason, however, to restrict it to such groups. Certainly pupils in junior and senior high school would find it interesting for use in consideration of world history and culture.

### MASTERS OF MODERN ART

(2 single strips, color; produced by Life Filmstrips, 9 Rockefeller Plaza, New York 20, N. Y.; \$6 per strip.) The latest editions to this series are *Henri Matisse* and *Vincent Van Gogh*. There are lecture notes which provide additional information about the specific material shown in the strips. In

each instance the intent is to provide the viewer with a selection of the works of the artist, particularly those which give us a key to his style and contribution. Selections illustrative of the different periods and moods are included; so are detailed closeups which enable us to examine paintings carefully. The lecture notes provide background data and serve as references. Filmstrips such as these can be used in a variety of ways and to meet many needs. They can serve either to prepare pupils for a visit to great museum centers, or as a guide to recall and discussion after such visits. They are also helpful in leading students to understand and appreciate the skill of artists and in helping to form ideas of art and the role of art in modern life.

### TAGLINE FOR SUCCESS

(Single strip, color; produced by and available without cost from Educational Service Dept. of Bristol-Myers Products Division, 45 Rockefeller Plaza, New York 20, N. Y.) There is no single royal road to business success, but a bit more attention to some of the points stressed in this filmstrip could well help any young man or woman who is starting out on a career. A plea is made for skill and knowledge to meet job demands; a good attitude, towards work and fellow-workers; basic cleanliness as an essential; maintenance of good health, and the wearing of suitable clothing. Wall charts and booklets may also be secured to use with the strip. There is a place for material of this type in college and training courses and in industry training units. The diagrams are clear and the descriptions simple, leaving opportunity for plenty of discussion.

### 20th CENTURY BOOKKEEPING AND ACCOUNTING SERIES

(Revised) (3 filmstrips, color; produced by Society for Visual Education, 1345 Diversey Parkway, Chicago, Illinois; \$15 set of 3.) This series is both general and specific. There is an overall emphasis on the general value of keeping accurate records. There is detailed and itemized information as to how to record transactions, post journals and keep a ledger of debts and credits. There are many diagrams designed to show the types of record books, accounts and processes involved. The material is based on the South-Western Publishing Co. books of the same title, and a very complete visualization is provided for this study. Good for work in business training courses in grades 9 through 12.

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$6.00. With guide, \$6.30.

**The Vikings** — In full color, 47 frames, based on the Kirk Douglas production. \$7.50. With guide, \$7.80.

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**A Lesson in Mythology** — Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50.

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50

**Alexander the Great** — Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50. With guide, \$7.80.

**Richard III** — Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50. With guide, \$7.80.

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50. With guide, \$7.80.

**Adventures of Robinson Crusoe** — In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50. With guide, \$7.80.

**Columbus**—Block-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$3.50.

**Hansel and Gretel** — In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50. With guide, \$7.80.

**Greatest Show on Earth** — In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50. With guide, \$7.80.

**Ulysses** — In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50. With guide, \$7.80.

# Sound Advice

about audio materials

and equipment

Elementary school teachers should be aware of several books by Fan Kissen, script writer and program consultant in the Elementary School Division of the New York City Board of Education station, WNYE. The books are "The Straw Ox," "The Bag of Fire," "The Crowded House" and "They Helped Make America."

Each of the first three are in the series "Tales from the Four Winds" and have been successfully reproduced as radio programs in New York. Just as the four winds blow from the four major directions, so the stories come from all over the world. Most of these stories are old, so-called folktales. They may not have been written down before—certainly not in the form of a usable radio script. No one knows who first told them but they have been handed down from parent to child through many generations.

"The Straw Ox" includes such familiar titles as "Jack and the Beanstalk," "The Sleeping Beauty," "Rumpelstiltskin" and, of course, "The Straw Ox." These scripts are simply written and included with each are simple sound effect suggestions.

Similarly "The Bag of Fire" contains many familiar titles including "Why the Sea is Salt," "Cinderella," "The Tinder Box" and "The Bag of Fire." Included in "The Crowded House," as well as the title playlet, are "The Pied Piper," "The Young Paul Bunyan," "The Three Golden Dranges," "The Ugly Duckling" and "The Wise Men of Gotham" to mention but a few.

Teachers will immediately recognize the opportunities these ready-to-go radio scripts can mean to them in literature, reading and speech instruction programs. These are 'tailor-made' for presentation over school-wide sound distribution systems. Or the class can use the tape recorder and perform and record plays of their own selection for their own satisfaction. The variety of uses in assembly

programs and classroom situations is limited only by the imagination of the teacher and her students. The publishers have recognized these potentials and have wisely made provision for them by stating that "No permission is required for informal presentation in classrooms or school assemblies" although permission for presentation beyond these limits must be secured from the publishers, Houghton Mifflin Company.

These three volumes are little gems which can be most effectively used in the audio education program as it contributes to student growth in reading and in speech.

"They Helped Make America" is quite different in that these are reading plays. Production with limited school facilities would be difficult. Costumes are required, as are special sets. Seventh graders, however, who seek introduction to the form of the drama, can profit from reading about such men as William Penn, Benjamin Franklin, Paul Revere, George Washington, Sam Houston, Abraham Lincoln and others who excite their imagination and whose lives and deeds are integral to the growth of America.

The amazing growth of the language laboratory idea and its broad acceptance on all levels of instruction prompts us to try to keep abreast of the flood of foreign language records approaching or on the market. LEARN FLUENT SPANISH (*Wilmac Recorders*, Pasadena, California), is one example. Wilmac has produced many records in the major foreign languages and is well equipped to contribute successfully in this area. LEARN FLUENT SPANISH is entirely recorded in the foreign language and is designed so that the student listening alone or in a group situation is immediately immersed in it. The content is travel oriented, being based on travel situations. The vocabulary employed is entirely practical

## NEWCOMB DEPENDABLE

### CLASSROOM RECORD PLAYERS AND RADIOS

Newcomb sound products have proven their dependability by delivering years of trouble-free service in leading school systems throughout the country. They are safe; ruggedly built of the finest quality materials; most are transformer powered for best performance, maximum safety. With easy-to-service construction and quickly available American-made parts, it is a simple matter for any service man to put the equipment in like-new condition.

NEWCOMB serves your other sound needs with **DEPENDABLE PUBLIC ADDRESS AMPLIFIERS** and **DEPENDABLE TRANSCRIPTION PLAYERS**. Write for complete catalog.

and it is not impossible, within the limits already indicated, that the student in a short time can be conversing simply in the language.

Method is important here and the authors have wisely elected to use a pure aural-oral approach, giving the student ample time to repeat heard phrases and to respond to recorded questions. Although a translation and manual accompanies the recordings, it cannot be used except for students who have a facility for reading quickly and easily.

Foreign language recordings must also be judged on the basis of speech. These represent superior enunciation and pronunciation and can be effectively employed in instruction on the junior high school level and above in the introduction of the language and in the early development of a sizable vocabulary. Of course the speakers can be imitated to good purpose for proper speech.

If the recordings are employed below the seventh grade the text material becomes less important and the recordings then must stand on their merits. In this instance rapid progress may not be possible—it may not even be desirable. But younger children can enjoy and profit from the aural practice.

ENRICHMENT MATERIALS (New York, N. Y.) offers four titles adapted from the Landmark Books. These include "George Washington: Frontier Colonel" and "The Santa Fe Trail," pressed back-to-back on disc 116. Each of these can be useful, particularly in the upper elementary and junior high school grades, in classes studying American History. Each of the recordings deals with the westward expansion of the American people. The recording of George Washington emphasizes his early journeys to the Ohio valley and his services in that area to the British expedition—particularly General Braddock. Students will learn something of the rivalry of the French and the British in pre-Revolutionary days and of warfare in the trails and forests of the then unexplored west.

"The Santa Fe Trail" deals with a later period, of course, and recounts dramatically the trials and hardships encountered by the traders who, in 1822, made up the first wagon train westward from Franklin, Missouri. Included in this recording are mentions of the exploration of the Cimarron River, the Mexican War of 1846, and the Gold Rush just three years later.

Junior high school students can enjoy and profit from hearing "Thomas Jefferson: Father of Democ-

racy" (ENRICHMENT), which is a dramatization of major events from the life of this American statesman. Beginning with Jefferson's political activities prior to the American Revolution, this recording relates his contributions to the framing of the Declaration of Independence and his service as President of the United States. This is an excellent recording which can be valuable for either student motivation to study and reading or for quick summary of the life of the founder of the University of Virginia. The reverse side, intended for somewhat younger students, is titled "The Vikings," and summarizes the explorations and settlements of Greenland and the American continent, led by Eric the Red and his son Leif the Lucky.

Senior high school students can gain a new insight into Shakespearean drama through the recordings issued by THE SPOKEN WORD (New York). Included in their recent releases are four, all of which are superior. These are performed by the Gate Theatre Players of Dublin. "As You Like It," "Much Ado About Nothing," "Taming of the Shrew" and "Twelfth Night" are the four titles thus far released. Each play is complete and can be heard with profit either by individuals listening alone for pleasure or study, or by groups listening together. The dramas are unchanged from the original, except for the deft and useful introduction of simple stage-setting sound effects. These recordings of complete Shakespeare plays represent valuable contributions to the recorded literature available to schools.

Equally valuable are several recent CAEDMON (New York) releases such as "The Ancient Mariner" backed up by "The Poetry of Coleridge" read by Sir Ralph Richardson. In addition to the title poem, "Kubla Khan," "This Lime Tree Bower My Prison," "Frost at Midnight" and "Dejection: An Ode" are heard.

It is interesting that when Edison developed the first crude phonograph he spoke of developing a form of "written sound" which could be preserved and reheard. Francis Turner Palgrave, at about the same time, was so impressed with the beauty of some English poetry that he collected an anthology of particularly impressive works. These two arts have been combined in CAEDMON'S "Palgrave's Golden Treasury," which represents the work of many major English poets whose work was well known before the twentieth century. These include such giants as Arnold, Burns, Byron,

Coleridge, Donne, Dryden, Keats, Marlowe, Milton, Shakespeare, Tennyson and Wordsworth to name but a few. All in all fifty-four poems selected from Palgrave's original anthology are here reproduced in sound as they were meant to be heard. This too, is an exceptional recording and can well be used in secondary school record libraries as well as in other collections for adults.

Still in the area of English Poetry, we would like to draw to your attention "The Poetry of Keats," also published by CAEDMON. Sir Ralph Richardson reads this recording, which includes "Ode to a Nightingale," "Ode on a Grecian Urn," "To Autumn," "Ode to Melancholy," "When I have Fears That I May Cease to Be," "On First Looking Into Chapman's Homer," "La Belle Dame Sans Merci" and "The Eve of St. Agnes." We have not been able to give you the complete contents, but this selection can indicate the importance of this recording in the instructional as well as the pleasure listening program. The poems are obviously carefully and well selected and the reading is superior. Here, too, is a recording which can contribute much to the pleasures of study and at the same time increase both the speed and the intensity of learning for secondary school students as well as college students and adults.

We all recall the delightful "Rutabaga Stories" which Carl Sandburg created for his children. CAEDMON has produced a recording of seven of these fascinating tales as told by the poet and author himself. It is difficult to assign such a recording to any particular group except by saying that it is delightful leisure listening for children of all ages—and instructionally valuable in the elementary school for the opportunity it gives to introduce children to Sandburg. The stories here recreated involve the fabulous trip to the Rutabaga Country and introduce such delightful places and charming people as the Village of Cream Puffs, Hatrack the Horse, the wild Babylonian Baboons and Googler and Gaggler. This one is really 'fun for all' and can be used in instruction for a variety of purposes on several levels of learning.

"Listen and Play the Piano" is an effort to offer direct instruction in music for beginners. CABOT, in publishing this record, claim no more for it than that through it some musical talents may be discovered. Hardly intended for school use, it may still be applicable to home situations and may be used in a supervisory sense to determine specialized talents.

# Church department

by William S. Hockman

## Back To Green Lake

Most oldtimers in the church AV field will welcome the news that the 1959 international conference will be held on the beautiful grounds of the American Baptist Assembly at Green Lake, Wisconsin. Opening Sunday evening, September 6th, with a keynote presentation, the 16th Conference will conclude Friday evening the 11th. During these days the theme will be "Improving Christian Communication." Let us hope that the accent will fall on "communication" and not on spelling out "the message"—a temptation the clergy find it hard to resist. Again, let us hope that some of the "high ecclesiastical brass" show up for the consultation which will run concurrently in some manner to be devised by the Conference sub-committee. In 1960 the Conference is to be held at the University of Colorado, at Boulder, with August 17 to 24 as the favored date.

## The AVRГ

What a handsome and useful volume, that FOURTH EDITION AVRГ! Here is a book every minister, educational director, and church school superintendent will reach for often, and as he does he will have warm inner feelings of gratitude to the Committee on Audio-Visual and Broadcast Education (CAVBE) of the National Council of Churches (NCC) and especially to Don Kliphardt, expeditor and editor of the vast project. And a vast job it was! Assembling more than 50,000 pieces of information from the Preview and Evaluation Committees across the country and other sources, and reducing it to the pages of the AVRГ, while carrying forward the other concerns and work of the Department, was a task requiring competent skill and many hours of labor beyond the line of both pay and duty. We salute them for a job well done! Now let the church buy

(\$10.00) this indispensable resource and use it. Orders sent to CAVBE at 257 Fourth Avenue, New York 10, will receive prompt attention.

## Filmstrips For Lent

If I were responsible for the Lenten services in my church this year, I would seriously consider using a filmstrip series. It would be no short-cut to ease. Far from it; even more work would be involved than for a talk-and-hear series. It would do at least two things: a) give a new format to these services; and, b) bring Biblical scenes and persons alive as talk can't do.

To get my series of seven, I think I would use Part IV of Cathedral Film's "Stories of Jesus" filmstrips. On the pictorial side they contain good dramatic photographs, and on the visual, a commentary both informing and inspiring and having good technical qualities. To these six I would add another filmstrip. *The Raising of Lazarus* would be a good prelude to Passion Week events covered by the six. Again, I would consider the fitness of another: *Symbols of The Cross*, from Cathedral's "Symbols of The Church" series.

How would I put this material together into progress? Many others would be suitable, and among all of us there is bound to be a great range of valid preference. I would start with a hymn, follow with scripture, and end this opening phase of the service with an invocation. Now would come another hymn, and after this a session of prayers. Now I would make the group ready to see (and experience) the filmstrip presentation. To do this I would set the event—Triumphal Entry, Passover, The Trial, The Crucifixion, The Resurrection, and the Upper Room Revelation—in their largest context. I would avoid saying what the filmstrip was going to say. I would, however, give it a very large frame of reference. I would be quiet and factual about it; not tense or preachy; and not over 5 minutes long.

Now we would be ready for the filmstrip. Of course, I would have

everything in readiness and tested, and be sure of any who were assisting me in the operation and control of facilities and equipment.

After the filmstrip would come a prayer. It would bring our total experience before God in thanksgiving and praise, and recommitment, under His grace, to Christian living.

Now the closing hymn, still in the mood of the prayer, and, the benediction. All this within an hour, and better still within 50 minutes.

For promotion I would make up an attractive little four-page folder, to be mailed out to the parish ahead of Lent, and placed Sunday by Sunday as a reminder in the pew racks.

That's how I'd go about using a filmstrip series for my Lenten services for my parish. How would you plan yours?—WSH

## Tipping In Church

According to the 64-frame color and sound filmstrip, *A Tip Or A Talent*, the giving of young people to their church's budget often resembles tipping more than Christian stewardship. Produced by the United Presbyterian Church in the USA in cooperation with the Department of Stewardship and Benevolence of the National Council of Churches, this filmstrip will have wide acceptance and usefulness in the local church, in youth conferences and rallies.

It takes up the situation of teenager Don, who tells his own story. On a double date on Saturday night, he is just about (financially) able to meet the tip when the check for refreshments is dropped on the table. On Sunday, just after the collection plate passes, he suddenly realizes that he has just tipped God, as it were. This triggers a chain of reflections on all that he has received from God via his parents, his home, his friends, and his church. As he shares these reflections on the quality of his Christian stewardship via the commentary of the filmstrip, we join him easily in resolving to do better ourselves.

Produced for use with Junior Hi and Senior Hi young people, this filmstrip can help the thoughtful youth leader give new and deeper meaning to Christian stewardship. The art is quite acceptable in quality; the content well organized; and the narration well-spoken and effective. It is a creditable and useful job. Available from Presbyterian Distribution Service, 156 Fifth Ave., New York 10, N. Y.

## Block Drama

One way to evaluate a filmstrip is to measure it against what the maker says he set out to do; against what he intended to accomplish.

In producing *The Builders*, the Division of Evangelism of the United Presbyterian Church in the USA (156 Fifth Ave., New York 10) says it "is to state clearly and briefly the basic responsibility of the evangelism chairman and committee in the local church." . . . That it is not a philoso-

phy of evangelism and not "intended to be an exhaustive presentation of the various methods or program ideas on evangelism. . . . The one focus of attention is upon the work of the committee." It is "to show exactly how a vital evangelism committee will organize itself to do its task."

Measured against this description, *The Builders* is just short of a total flop. We have a hunch that more money than know-how went into its planning.

The visual goes one way; the auditory another. While we look at some five or six adults fooling around with some over-size blocks we are supposed to listen to a narration having little or nothing to do with this block drama. As our attention shifted back and forth between the two totally unintegrated elements of this so-called filmstrip, we wound up with little or nothing of what the maker said he was going to give us.

Being visual, our attention seemed

to stick by the stooping, lifting, and aligning of the block-drama — a mountain of pseudo-effort that finally brought forth a very silent and unmeaningful church-arch.

What is this filmstrip good for? Certainly not to accomplish the objectives of the statements above! It neither shows how to have fun with blocks, or, how to get yourself organized and motivated to do local church evangelism. It does illustrate superbly how not to make a filmstrip.

## The Power of Literacy

After Saeed learned to read he was not the same again; nor was his village ever the same. That's why the filmstrip that tells of this transformation is titled, *Village Reborn*.

When literacy came to his village life got a new dimension — for the men, for the women, for the children. But, what would they read? What would supply abundant fodder for the mind? And, what would be its quality? Serious questions, and all to be answered for young people and adults who will let *Village Reborn* take them into a quest for more information about the work of the Committee on World Literacy and Christian Literature, which carries on work in more than 50 countries and more than 250 languages. On this write to Lit-Lit, 156 Fifth Ave., N. Y. 10; for the filmstrip, write to Friendship Press, 257 Fourth Ave., N. Y. 10. Price, \$5.00; a good buy for your local AV library.

From the same source you can get *Freedom Highway*, 35 minutes worth of episodes and memorable events in American history. Good and useful for men and women — when history is what you want.

## Sound and Fury

*Battle On A Small Planet* is a 94-frame 15-minute "sound filmstrip in color cartoons for youth on the meaning of the Gospel." The commentary is LP recorded with music and sound effects, and there is a use-guide to complete the package. It was produced by the Division of Evangelism of the United Presbyterian Church in the USA for use at presbytery youth rallies and in local church fellowship groups.

Boiled down to essentials, as the title suggests, the content is concerned with the battle of God with the Devil for the souls of the inhabitants of this "small planet." How is this message on the "meaning of the Gospel" delivered?

On the art side, I found the visualizations off-beat, ineffective, crude, disgusting and disconcerting — when

## HELPFUL BOOKS

**THE AUDIO-VISUAL EQUIPMENT MANUAL.** By James D. Finn. Published under the general editorship of Edgor Dale. 384 pp. 1400 illustrations. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$9.50.

**AUDIO-VISUAL MATERIALS: THEIR NATURE AND USE.** Revised Edition. By Walter Arno Wittich and Charles F. Schuller. 570 pp. 249 illustrations, 14 Color Plates. Harper & Brothers, 49 E. 33rd St., New York 16, N.Y. 1957. \$6.50.

**AUDIO-VISUAL METHODS IN TEACHING: REVISED AND ENLARGED.** By Edgor Dale. 544 pp. Illustrated; and with 49 full-color plates. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$6.25.

**EDUCATORS GUIDE TO FREE SLIDE-FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Tenth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$6.00.

**EDUCATORS GUIDE TO FREE TAPES, SCRIPTS, AND TRANSCRIPTIONS.** Compiled and Edited by Walter A. Wittich, Ph.D., and Gertie Hanson Halsted, M.A. Fourth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.75.

**EDUCATORS GUIDE TO FREE FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Educational Consultant, John Guy Fowlkes. 18th Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$7.00.

**MITCHELL'S MANUAL OF PRACTICAL PROJECTION.** 450 pp. Illustrated and cross-indexed. Covers every aspect of motion picture projection. Material presented in easily understood language — not too technical, yet technically accurate. Most complete and practical handbook for projectionists ever published. International Projectionist Pub. Co., 19 West 44 Street, New York 36, N. Y. \$6.00.

**STANDARDS OF PHOTOPLAY APPRECIATION.** A Course of Study in Photoplay Appreciation, Including a Photoplay Approach to Shakespeare. By William Lewin and Alexander Frazier. Illustrated. Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey. \$4.75.

**A WINDOW TO THE CHILD'S MIND** — Alpark's New Educational Handbook by Dorothy R. Luke, 268 pp. The first authentic analysis of Helen Parkhurst's recorded interviews with children. An indispensable guide for teachers. 1955 Starbridge Publications, P.O. Box 574 Grand Central Station, New York 17, N.Y. \$3.50.

judged against what the Gospel innately requires of those who accept it. A be-bop cartooning of what goes on between a soul and its Maker is both bad taste and bad.

Turning to the audio, we are treated to screechings, to bangs, to trumpet blarings, to irrational sound effects as a jerky narration talks excitedly about sin, selfishness, and salvation in beat-generation clichés. What a racket!

And look at the equipment this filmstrip needs for its most effective utilization: a filmstrip projector integral with a record player which can utilize subsonic frame-advance signals. How many churches will have such equipment? Few. What if they don't? They then are likely to get even more racket from the record—as the subsonic becomes quite sonic. This adds up to greenhorn and unrealistic planning. Let's take some comfort from the realization that few youth leaders will ever be so casual about the "meaning of the Gospel," or hard up for program material, as to take this flippant filmstrip failure seriously.

## Films In Brief Review

### Seminary Film

In *Such a Time*, a 25-minute full-color sound film, tells the story of young Dick Stewart and his wife Lisa. Coming from a background of wealth and privilege, he determinedly seeks the true meaning of life as a seminarian at Protestant Episcopal Theological Seminary in Virginia. The film follows him and Lisa, through ups and downs, for his three years at TSV. We are given some insight into the seminary process. Not only do we become acquainted with TSV, but with something relatively new; the coming to seminary of older men who have made a success of some vocation or profession. For classmates Dick Stewart had a former Wall Street broker, an airlines pilot, and a guided missile expert. The dramatic story of men like these—now a common sight on most seminary campuses—is nicely presented in this high-quality low-budget film. It will have wide usefulness in promoting and interpreting the cause of contemporary seminary education generally. Available from the Theological Seminary of Virginia, Alexandria, Va.

### Sympathy For Alcoholics

This is just what the 30-minute B&W dramatic film, *How Long the Night*, is all about. I quote from promotional literature: "This is a frank attempt to build understanding and sympathy for alcoholics. Until churchmen learn to love alcoholics as much as they hate alcohol, they can never

# 9 You can project for Audio-Visual Techniques with the Keystone

You meet every need of group instruction with the versatile Keystone Overhead Projector:

**STANDARD SLIDES.** Have you seen the latest additions to Keystone's vast library of educational slides?

**HAND-MADE SLIDES** for presenting special subjects, and for enthusiastic group participation.

**TYPEWRITTEN SLIDES**—clean cut, beautifully legible—for lessons, notices, etc.

**POLAROID TRANSPARENCIES** projected less than 3 minutes after you snap them.

**QUADRUPLE SLIDES**—the most convenient and by far the most economical way to project drawings in series.

**DISCIPLINE DURING PROJECTION**—every teacher knows the problems of a darkened room; you use the Keystone Overhead Projector with normal lighting, facing your group.

**Why have a projector that does less?** You are invited to have a Demonstration of the projector that does everything. Write KEYSTONE VIEW CO., Meadville, Pa. Since 1892—Producers of Superior Visual Aids.

## KEYSTONE Overhead Projector

**MICRO-PROJECTION;** the entire class can see a microscopic subject.

**STRIP FILM** shown with the Keystone Overhead Projector's powerful illumination.

**2-INCH SLIDES,** and 2 1/4-inch, clear doylight projection by 750 or 1,000 watt lamp.

**TACHISTOSCOPE**—indispensable for efficient teaching of reading and spelling. Reading rates increase 50% to 75% in a few weeks. No teaching procedure has ever had such unanimous approval from research and controlled experimentation (reports on request).

fulfill a redemptive mission in this area of human need."

Again I quote: "*How Long the Night* portrays the reasons why so many alcoholics keep on drinking, and the struggle of one wife to try to understand her alcoholic husband." (One main reason is given; it is hypothetical.)

One more quote: (This film) "is primarily a discussion starter. Adult church groups will use it to point out ways of helping alcoholics and their families." It is for adults only.

This film ought to kick up discussion. I'd like to ask if the "mean mama" etiology of alcoholism is after all an explanation? Again, if I convert my church into a hospital for alcoholic cripples, and center my church's attention on loving the alcoholic, who then will take up the task of trying to bring the social plague of alcohol under control? Shall we deal with victims, or, the cause of victims? Isn't the liquor business, from grape to gutter, getting off pretty easy when it can say to the church, "Here, you be nice and helpful to (my) alcoholic, it's your job after all. We prefer to stick to production and distribution?"

Yes, THIS film can start discussion. I dare you to prevent it! Available for a rental of \$8.00 from the Methodist Publishing House, Nashville, Tenn., and its film libraries across the country.

### Hawaii and China Seas

In the 30-minute sound and color film, *Tongues of Fire*, released by Cathedral Films, Inc., we have the dramatic story of a Hawaiian Christian

woman who defies pagan superstition to the very brink of a boiling volcano crater in asserting her faith, in regaining her hold on her wavering converts, and in reawakening the missionary impulse and motives of a young couple from the mainland. For use with young people and adults in the context of worship and inspiration. Recommended. Rental \$12.

In 28 minutes running time. *Cry of the China Seas* takes us to Formosa, to Korea, to Hong Kong, and the Philippines. Here we see the life-giving Gospel contrasted with the grab-bag of illusions offering by communism, and witness for ourselves the ability of many of these struggling people to discern the far-reaching difference. Recommended. By Cathedral Films; renting for \$12, and widely available from Cathedral and other film rental libraries from coast to coast.

## Filmstrip-Centered Week-Day Teaching

By Elizabeth Loughhead  
First Baptist Church  
Hudson Falls, N. Y.

Here they come! From the public school nearby for our released-time religious instruction. How *released* they are—from the restraints of the school room, with its necessary discipline, to the glorious out-of-doors for a short period before they arrive at the church in high spirits and in no mood to learn anything.

Staffing such a school, especially in a small community, is quite a headache, and when you add the problems of adequate and attractive curriculum, you soon have migraine. But we wrestled with these and other released-time problems for several years. No one was happy with our instructional pattern and our progress with it.

Then our pastor tried a plan which has proved successful, and the best way to explain it will be to describe it in action. Let's see what happens to a Seventh Grade class.

On Wednesdays at 2 o'clock they are released from the last school period for the day. They arrive "released"—all 44 of them—at the church. They go to an assembly and are met by six adults. One acts as the superintendent. Hymns are sung. This gives them a chance to "let off steam." These hymns are related to the theme for the day. Gradually these young people settle down. Scripture is read. Prayer follows; the young people often suggesting the central concern of these prayers.

Now a sound filmstrip is presented. This year we are studying the life of St. Paul, using Cathedral's excellent

"Life of St. Paul" series. We try to bring this presentation off smoothly.

After this assembly program, the young people go to permanently assigned discussion groups, eight or nine to a teacher. Here they discuss questions, prepared by the superintendent and based on the filmstrip. Each pupil gets a set, mimeographed and ready for his notes and inclusion in his notebook. The superintendent does not teach a "class" but remains available as a general resource.

At the close of the class session the teachers meet with the superintendent to evaluate the session, to preview and to discuss the filmstrip for the next week.

What makes this a good plan for us? First, it is relatively easy to secure teachers since the superintendent takes the initiative in guidance and weekly preparation. Secondly, with enough teachers available, the class or discussion groups can be small. Thirdly, a good sound filmstrip holds attention and gets over its message, factual and otherwise. Lastly, our teachers enjoy the staff meetings and leave each Wednesday feeling that they are prepared, in the main, for next week.

Our filmstrip-centered plan is not perfect, of course. We like it enough to keep working at it and with it, and just the other day one of our teachers remarked, "Now I enjoy week-day teaching," and there was a lot back of that indirect appraisal of our plan.

## AV Usage in a Typical Church

According to Williard Le Grand, chairman of the AV committee of the Roundy Memorial Baptist Church (4819 N. Ardmore Ave.) of Whitefish Bay, Wisconsin, the box score on AV usage for a recent year is as follows:

	Filmstrips	Sound Filmstrips	Films
Pre-School Nursery	1	5	2
Kindergarten	7	5	2
Primary Department	8	6	2
Junior Department	7	8	—
Junior High	11	1	—
Youth Fellowship	3	—	1
The Congregation	1	—	1
Vacation Bible School	4	4	—
Lenten Programs	—	—	5

During the year this church purchased 23 filmstrips, 16 of them with recorded narration. It also put dark-out shades in the fellowship hall, and bought a three-inch lens so the Lenten films could be more satisfactorily projected. During this past summer it used a series of audiovisual programs for kindergarden and primary children during the worship service.

This usage and progress took place

under the guidance of an active audiovisual committee, whose annual report was made last spring to the congregation, and from which the above data was taken. — WSH

## Rural Christmas Film

For 22 delightful and informing minutes, *Christmas on Grandfather's Farm* holds aside the draperies of time and we look back across the landscape of the years and see in vivid colors and true perspective how a typical rural family celebrated Christmas as it was observed even as late as the teen years of this century. For those with lives old enough to have roots which reach the social-soil of the early 19 hundreds, the seeing of this film will be enjoyable nostalgia; for all others it will be the engaging and instructive drama of life that moved at a pace leaving room for graciousness. Such films, when given the sheen of authenticity and charm, are never easy to make and Coronet Instructional Films deserves genuine appreciation for bringing this one off so well. A very valuable and useful and enjoyable contribution to film-Americana. Available from local rental libraries.

## Headache Switch

That's what the worker at the next desk called it! It fit the case pretty well, for Ed, design engineer, blew his top over a smudged drawing. He got a calm explanation of his behavior from a knowing colleague who called it another case of the "headache switch." The film telling us about Ed, and showing us how he got over this ailment, is called *Anger At Work*. I liked it. I wished that every man of my church could see it. What it would do also for their wives! They get headaches, too, and they need to understand their husbands, besides. Well, pastor, service club programmer, staff advisor to assorted organizations in the church, here is a good film which will come pretty close to home (in a constructive way) to most of your folks. Recommended. Available from International Film Bureau, 57 East Jackson Blvd., Chicago 4, Ill. Running time 21 minutes.

Please send all materials for review in this Department to William S. Hockman, 12 June Drive, Glens Falls, New York.

# New Equipment and Materials

## New Title — Same Content

The above new title, we feel, is more descriptive of the contents of this department than was the designation "Audio-Visual Trade Review." It is our aim to present here a brief notice of all new equipment and material that is brought to our attention by producers and distributors. Space limitations forbid anything more than just enough data to permit our readers to judge whether they have use for the item, or at least have need for more information con-

cerning it. Each item is numbered so that readers may, if they wish, enlist this magazine's further services by simply circling the corresponding number on the coupon that appears, for this purpose, in each issue. Our readers will save time by writing direct to the source — full addresses are always given, and firm names decoded, in the back of the issue. When writing won't you please mention that you "saw it in Educational Screen & A-V Guide." The data published here is based on press releases and other information from the sources.

These are new items, not evaluations.

Above all — check through the advertisements in this issue and respond to them — first. Our advertisers make it possible to provide you this publication. They are the outstanding leaders in the audiovisual field. They deserve our readers' first consideration.

News of primary interest only to those in the audiovisual industry will continue to appear at the end of this department. Those of import to both user and source will be found up front under "NEWS."

For addresses of the sources supplying information on which these listings are based, refer to Directory of Listed Sources, page 53. For more information about any of the equipment announced here, use the Readers' Service Coupon on page 52.

## NEW EQUIPMENT

### CAMERAS, Movie & TV

**Sound Recorder for Arriflex 16.** New Gaumont-Kalee No. 1690 sound recording unit; camera movement carries film through recorder; amplifier connection a single lightweight flexible cable; 2-channel recording amplifier includes input mixer for 2 mikes, monitoring amplifier for headphone monitoring off either input or film, and volume indicator drive amplifier; 7.5 amp 30-hour battery is housed in amplifier chassis; sound is recorded on pre-stripped film. CEC.

For more information circle 101 on coupon

### CAMERAS, Still

**Super Ricohflex** accommodates both 2 1/4x 2 1/4 and 35mm film, two film counter windows at back show which is in use and number of exposures taken. 80mm f/3.5 lenses, full-size ground glass focusing, eye-level action finder, wide-angle magnifier. Complete with leather carrying case and BC-125 flash unit \$29.95; 35mm color back accessory \$9.95. RICOH.

For more information circle 102 on coupon

### CAMERA ACCESSORIES

**Battery Capacitor Flashgun**, designed for use with the Practina and Practica line, may be used also with most 35mm cameras. In some instances a special cord will be needed. The gun is all metal, finished in black crackle; reflector is a folding fan of stainless steel. A 22 1/2 volt hearing aid type battery provides amperage for up to 2 years use. A "ready" light, pushbutton operated, checks capacitor charge. Uses No. 6 or No. 26 flashlamps. With plastic carrying case, coiled cord and mounting bracket, less battery, \$15.50. STANCAM.

For more information circle 103 on coupon

**Blimp for Arriflex 35.** 1000-foot blimp accepts regular synchronous motor and standard Mitchell magazines. No alterations necessary on either camera or magazines. Permits microphones within 3 feet of camera. Built-in filter holder. Remote focus and diaphragm adjustment. \$3,995. CEC.

For more information circle 104 on coupon

**Exposure Meter for High Speed Photography** measures only the amount of light that reaches the film. Designed for Fairchild Motion Analysis cameras, its 2-degree acceptance angle permits readings to be taken from camera position. Aperture setting is read directly from the ring scale, present to the film speed. Model HS3201 — \$179.50. FAIRCHILD.

For more information circle 105 on coupon

### Two New Color Films, featured by PER-

UTZ at recent Photokino. **Color C-18**, daylight reversal, ASA 50, 5400, K reportedly has exceptional latitude. **Color C-12**, ASA 12, requiring laboratory machine development, is offered for extreme sharpness. All Perutz 35mm films have frame identification numbers 1-90 along both perforations. All are in tropically safe packing. **Perukine U-27** film for 16mm and 8mm cameras has been increased in speed to 4x that of U-21 and 16x that of U-15. Image color is reportedly identical to that of other makes of film and inter-splicing is said to present no problem. BURBR.

Gaumont-Kalee No. 1690 sound recording unit

## PROJECTOR ACCESSORIES

**Fibre Shipping Cases** in a wide range of sizes include cases for video tape, in addition to those for 16mm film, tape and filmstrip-and-record. Minimum order 12. EXCELSIOR.

For more information circle 108 on coupon

**Long focus lenses** for Genarco 3,000-watt slide projector. 8½" to 22", prices range from \$20 to \$95. GENARCO.

For more information circle 109 on coupon

**Pylon Film Cleaner.** For cleaning films on projector at normal operating speed. "FilMagic." Kit for B&H, Ampro and EK projectors \$5.40; for RCA, TSI or Victor \$6.25. DC.

For more information circle 110 on coupon

**Remote Control** for Airequipt slide magazines, fits most projectors using this make of changer and magazines. \$35.95. 10-foot pneumatic remote control cord \$3.95; electric \$9.95. AIREQUIPT.

For more information circle 111 on coupon

**Slide Editor.** Accessory for Airequipt slide changer for showing single slides instantly, for previewing, sorting, editing. AIREQUIPT.

For more information circle 112 on coupon

**Strong Universal Arc Slide Projector** takes Genarco 3¼x4" slide changer. This electric slide changer carries 70 slides and changes them by push button remote control in half a second. \$285 plus mounting bracket \$38. Conversion instructions. GENARCO. STRONG.

For more information circle 113 on coupon

**Vue-File.** Permits filing of 2x2 ready-mount slides in 8½ x 11 looseleaf binder, 12 to a sheet, in heavy cardboard frames in which the 12 slides can be readily arranged and shifted for selection and editing. A way of filing slides right with teachers' guides, school made outlines, etc. for ready reference. 25 sheets (holding 300 slides) \$8.75. B&J.

For more information circle 114 on coupon

## SOUND EQUIPMENT and Accessories

**"Atomic Jewel" Static Eliminator.** Devise about the size and weight of a

green pea clips to the tone arm of a record player to eliminate dust-drawing static from records. Radioactive "Polonium" emits alpha rays in non-toxic quantity. Made under byproduct material license from AEC. ROBINS.

For more information circle 115 on coupon

**"Classroom 21" TV Receiver.** Provides for instantaneous switch from closed circuit to off-the-air TV reception; separate input jack allows use as public address speaker for school announcements or classroom lecture. Accessory stand provides tilt control to evade reflections. 20-foot service cord. Charcoal or blond grained finish. MOTOROLA.

For more information circle 116 on coupon

**Dual Voice Coil Woofer.** 12", 40-6000 cps; 8 ohm. Eliminates second woofer, connects readily to a limited-range second channel speaker for stereo. Model C-12SW \$39.50. UNIVERSITY.

For more information circle 117 on coupon

**FM Tuner Knight KN-140** basic FM tuner can be played through any hi-fi system, TV, tape recorder or AM radio or similar unit having input jack. 9" x 7½" by 2¼" high. Automatic frequency control locks in FM stations. 50-20,000 cps. Two high impedance outputs permit feeding signal directly to recorder amplified off the air. \$49.25. ALLIED.

For more information circle 118 on coupon

**Giant Voice Vagabond,** transistorized hand portable loudspeaker, 6 lb., 1000x voice amplification. Elimination of tubes permits very rough handling. Detachable microphone and accessory mount for standard PA setup, or mounting on car fender with mike inside car. \$179.50 complete with batteries. Carrying case extra. ANTREX.

For more information circle 119 on coupon

**Knight 3-way High-Compliance Speaker System.** 12" woofer, 8" midrange and high frequency tweeter. Encased L-C crossover network (6 db per octave) at 800 and 3500 cps. 40-19,000 cps response. 20 watt, 40 watt peak. 16 ohms. Case approx. 14x26½x13," finished 4 sides, for use in bookshelf or on mantel. Mahogany, limed oak, walnut. \$84.50. ALLIED.

For more information circle 120 on coupon

"Gold Crown Prince" stereo tape recorder

**"Gold Crown Prince" Stereo Tape Recorder** plays half-track monaural and stereo to two cathode follower outputs. 30-30,000 cps at 15 ips; 30-10,000 at 3¾ ips. 3 motors, 3 speeds. 2 input channels, 2 microphone preamps. Magnetic payoff and take-up. \$475. INTERAD.

For more information circle 121 on coupon

**Matched Arm and Magnetic Cartridge for Stereo Disks.** New combination developed in collaboration with London Recording Laboratories. Tracking force 3.5 grams; diamond stylus tip 0.5 mil radius; output 4 millivolts; tip mass reportedly 50% lower than on conventional design cartridges; arm height adjustable from 1¾" to 2½" above mounting board; mounted on frictionless roller bearings. SCOTT. \$89.95. Hi-Fi catalog and technical data free.

For more information circle 122 on coupon

**Stereo Preamp Control Center** features five pairs of stereo inputs controlled from front panel; separate bass and treble controls on each handle even non-identical speakers when used in a stereo system; DC on heater filaments eliminates need for hum balancing. Model Knight KN-700A \$89.95; remote control unit \$14.95. ALLIED.

For more information circle 123 on coupon

**Stereo-TV Combo.** Combination of a TV receiver (21" or 24" screen), with a 4-speed, 3-speaker stereo phonograph and AM radio (AM/FM at extra cost). Mahogany, limed oak, or maple. OLYMPIC.

For more information circle 124 on coupon

## MISCELLANEOUS ITEMS

**Chalkboard Easels.** "Talent Scout" double easel permits two 6-12 youngsters to work simultaneously, 20x26" washable chalkboards adjusted separately for height, likewise the supply trays. Folds flat. \$16.65. Other models include the new Professional No. 250 Imperial, large canvas holder adjustable, built-in palette holder, folds flat, \$15. ANCO.

For more information circle 125 on coupon

**Cut-Out Letters for Bulletin Boards.** Made of colored cardboard, choice of red, black, green, yellow, blue, and white. 180 capitals 2" high; or, 240 letters 1¾" high manuscript style; set \$1. Reusable adhesive for mounting, \$1 per pack. MUTUAL.

News Recordings

Forrest E. Conner, Superintendent of Schools at St. Paul, Minn., and Jack Allen, social studies chairman at George Peabody College for Teachers at Nashville, Tenn., have agreed to prepare recorded monthly educational interpretation of important news for use in social studies classrooms and home room discussion periods, without invasion of teaching time. Dr. Conner is currently vice-president of A.A.S.A. and Dr. Allen is president of the National Council for the Social Studies and well known as author of successful textbooks on history and civics. Subscriber schools will receive a 15-minute unbreakable long-play news record early each school month, for unlimited use on 33 rpm players and intercomms. A year's service (9 records — \$18) by Ideal Pictures, Inc., Chicago, will begin in January.

Permafilm's New President

Paul N. Robins succeeds the late Pierre Clavel as president of this film protection service organization. Mr. Robins is also president of Library Films, Inc. and Television International Co.

Coronet Raises Prices

A price increase of approximately 10 per cent went into effect January 2, 1959. Basic price for 400-foot black-and-white was \$45, color \$90; is now \$50 and \$100 respectively. Those heretofore \$55 black-and-white go to \$60; color price heretofore \$100 is now \$110. Replacement footage now costs 12c a foot black-and-white (minimum 20'); color 30c a foot (minimum 25'). Total replacement prices for prints owned less than a year: b&w for b&w \$20; color for color \$60; color in place of b&w \$70. On prints owned for more than one year \$40, \$75, and \$90 respectively.

IIAA Health Films Now UWF.

The nine Health Awareness films released some years ago by the Institute of Inter-American Affairs are again available, through United World Films, at government prices.

How Big Is Stereo?

The 10th annual edition of the authoritative "Tape Recorder Directory" lists over 300 models. Only 113 are completely monaural, 29 have stereo playback and record, 39 provide stereo playback. In 1955 there were only 6 stereo models in 110 total. A leading tape recorder manufacturer reportedly is now selling three stereo to every two monaural; a year ago this ratio was re-

versed; two years ago he did not make stereo job. This fine annual directory is a "must" reference book for all who use tape and recorders. Free from AUDIO VISUAL DEVICES, Inc., 444 Madison Ave., New York 22, N. Y.

"Scotch" 200 Price Lowered

The price of the newest (and thinnest "tensitized" tape in the 3M line, the No. 200, has been reduced to \$8.75 for 2,400 feet, mounted on a 7" reel. The reduction is due, according to the maker, to stepped-up production in response to increasing demand for double-play tape.

Heads Da-Lite A-V Dept.

Robert Maybrier has been appointed manager of the newly formed Audio-Visual Division of the Da-Lite Screen Co. directly responsible to C. J. Cerny, vice-president in charge of sales. Bob has been with Da-Lite since 1954, with some 25 years of A-V experience.

NAVA Publications

Counting both black-and-white and color, more than 50 million Americans took about two billion photographs last year, according to James E. McGhee, Eastman Kodak vice-president. Color slides have had a good share in the general advance. McGhee foresees growth in

Address \_\_\_\_\_

the use especially of color negative, since a single such exposure can be the source of either a color print, a black-and-white print, or a color transparency. Negative-positive also offers exposure latitude since some correction can be made in printing.

### Some Films Are Popular

Demand for a timely sponsored film may mount so high, so fast, that the distributor is swamped with requests. In one such instance 500 prints were completely booked up within two weeks after they were put into circulation, and when 200 more were ordered these, too, were booked solid 90 days in advance. Sorry, name of film and its sponsor is confidential.

### Fulton Joins Scripture Press

Scripture Press announces the appointment of Roger Fulton, of Elgin, Ill., as its magazine department manager. Mr. Fulton has been actively engaged in Christian radio broadcasting.

### Good News From AVCOPI

The publications issued by the Audio-Visual Commission on Public Information (AVCOPI) are being widely circulated, according to a report by Don White, NAVA vice-president. Of the big illustrated **Gateway to Learning** 45,000 have been distributed from headquarters (250 W. 57th St., N. Y. 19), plus a special printing of 11,000 in California. **Telling Your A-V Story**, a pamphlet designed to make everyone in the field, whether dealer or educator, his own public relations man, has been circulated thus far in 2,300 copies. In a number of states groups of NAVA dealer members have supplied copies of "Gateway to Learning" for distribution through official state department of education channels.

### Sales Training Institute

The Audio-Visual Committee of the Church Federation of Greater Chicago has reacted favorably to suggestions from NAVA religious dealers that next year's religious A-V program also includes a sales training institute type of dealer-customer demonstration. A dealer will discuss audiovisual needs with a film-using churchman in a role-playing presentation, but the roles will be those of real life. (One suggestion was that the participants reverse their roles and have the preacher do the selling.)

### "Visual Communications Congress"

The annual meeting of the Society of Reproduction Engineers (2000 individual members in 16 chapters) was held at Chicago's Hotel Sherman Dec. 13-16. Trade show exhibits (71) were open from 1 to 7 each of the first three days (including Sunday), 1 to 4 on the fourth day. The exhibits ranged all the way from a 29-cent reproduction pencil to offset presses, cameras and diazo duplicators ranging well up in five figures. This professional group's casual equation of the term "visual communication"

with non-letterpress duplication of graphic materials may come as a bit of a shock to those who have thought of expression only in terms of television, motion pictures and other projected visuals. But the Reproduction Engineer and the industry segments that cater to his trade seemed no better informed about the ramifications of the audio-visual field, or about their own lack of local chapter liaison with other professional societies.

Proximity of the two fields was reflected in numerous exhibits at home equally in the annual NAVA A-V show and in this "Visual Communication Congress." Example: Bruning, Chart-Pak, Eastman Kodak, duPont, Ozalid, Polaroid, Technifax, Vari-Typer.

### NAVA Sustaining Members Meet

Hy Schwartz, Victor Animatograph president and chairman of the NAVA Exhibition Committee, urges attendance at the Mid-Winter Conference, at New Orleans, January 22-29, especially in view of its emphasis on the AV aspects of the National Defense Education Act. NAVA Sustaining Members will meet at 9 a.m., January 23, at The Roosevelt Hotel, New Orleans.

### Skibitzke Joins Family

Leonard Skibitzke, formerly with Moody Bible Institute, has been appointed Director of Sale Promotion at Family Films, Inc., Hollywood producer of religious motion pictures and filmstrips. Graduate of MBI and Wheaton College, Mr. Skibitzke served 11 years as pastor of a church near Chicago before accepting a part in the MBI audiovisual department, where he worked 11 years both in Chicago and, on the West Coast, directly with Dr. Irwin Moon.

### Know-how on the Language Lab

A series of five 25c booklets (\$1.00 for the set) has been prepared by Magnetic Recording Industries, 126 Fifth Ave., N. Y. 11, to tell schools "what, why, how and how much" the language training program covered by the National Defense Education Act will involve. When ordering, include remittance — and say you "saw it in **EdScreen**."

### Kodak Top Command

Donald McMaster, heretofore vice-president and general manager, has been named chairman of Eastman Kodak Co.'s newly created executive committee. His two co-members are Thomas J. Hargrave, board chairman, and Albert K. Chapman, president. William S. Vaughn takes over McMaster's former post. There are changes on the AV level also — "Bill" Allen gets a promotion and his spot as head of Cine Sales goes to James W. (Jim) Welch. Dick Gearhart's position is unaffected by the change.

### Argus Merchandiser

Carlos A. Chapman has been named Merchandising Manager for Argus Cameras, a division of Sylvania Electric Products Co. His responsibility will be the planning, promotion and advertising of all Argus photographic products. He previously served as product manager of the division.

### Major to United Studio

Jack Major, with 20 years background including Jam Handy, EBF and United World, has joined the staff of United Film and Recording Studios, 301 E. Erie St., Chicago, as Special Projects Promotion Manager. Charles A. Stumpf has been appointed General Sales Manager.

Eternal Life

Begins Now!

Show them a Triumphant Easter  
Faith for Today... with

# "THE MIRACLE OF LOVE"

45 min. B&W \$12.50

### FOR EVERY CONGREGATION EVERYWHERE

A compelling and dramatic motion picture of a minister who finds the basis for his Easter sermon in the problems of his congregation and his own family — that the resurrection faith in Christ gives the power to live triumphantly here and now — not just in the hereafter!

### OTHER FILMS WITH AN EASTER MESSAGE

Easter programs can be greatly enriched with the use of the Living Bible films, which authentically portray the final climactic days in Christ's earthly ministry

15 min. each. B&W or Color from \$5.00

An Easter faith is retained in the  
midst of the competitive business world.

*Star Performance!*

*For Vivid Presentation of Visual Material . . .*  
**There's Nothing Like a SCHOOL MASTER**  
**Filmstrip and Slide Projector**

The Graflex SVE School Master gives screen brilliance unapproached by any classroom projector of like rating. New Tru-Focus projection lamps in combination with precision-ground optical systems and lenses put on the screen all the brilliance of which the lamp is capable.

School Master projects filmstrips or 2" x 2" slides with equal facility and efficiency. The change from one to the other is made in seconds without tools and without adding or removing parts. Built-in remote control permits operating the projector from a distance—from the front of your class, for instance.

Handy built-in carrying handle facilitates transportation from one classroom to another. Threading and framing is easy. The optical system removes as a unit for cleaning. A powerful 4-blade fan assures cool operation. While a 5", f/3.5 projection lens is standard, others are available to match image size to any projection distance.

**PRICES**

School Master 750 (750-watt model—Cat. No. 3828) \$99.50; the 750 RC (750-watt model with remote control—Cat. No. 3826) \$134.50 and the accessory Rewind Take-up (Cat. No. 3880) shown attached in the illustration above is only \$7.50.

The School Master 500 (500-watt model—Cat. No. 3809) \$84.50; and the 500 RC (500-watt model with remote control—Cat. No. 3808) is \$119.50. Both models accept accessory Rewind Take-up.

# On the SCREEN

## This Month's Cover

To grace the cover of our annual religious issue, we chose a still from the Family Film "Power of the Resurrection," filmed in cooperation with the National Council of Churches to be telecast across the nation this Easter.

Co-produced by Henry Denker, who was responsible for the screenplay, and Sam Hersh, the feature-length film was photographed in color and presents its story through the life of Peter.

Family Filmstrips offers three sound and color filmstrip series based on this story. They are titled, "The Bible Story of Easter," "Peter's Resurrection Faith," and "You Shall Receive Power."

## "Sputnik" Stars Again!

The satellite featured on our January cover is the subject of an excellent and timely new film, "Exploring by Satellite," produced by and available from Delta Film Productions, Inc., of Chicago. Presented both in color and in black and white, it is suitable for a wide range of age groups.

The new frontiers of outer space are being explored through the use of

rockets and satellites as part of the International Geophysical Year program in cooperation with some fifty nations. Note the Delta ad below for detailed information on this fine film.

## In Store for March

Plenty of variety is in prospect for next month, as waiting on our desk lie Florence Freedman's views on AV in Israel, an article by John Moldstad

on Indiana's program for classroom audiovisual facilities, and two thought-provoking discussions of AV courses in the teacher-training curriculum — their proper place, virtues, faults, existence or lack of it.

Also, readers may look forward to an interesting presentation of visual aids for teaching mathematics and practical advice toward more effective bulletin boards. Then, in April, the annual issue stressing AUDIO materials, always gaining in importance!

# NO MORE AUDIO- VISUAL ROOMS!

Classrooms devoted entirely to audio-visual education (by projection) are no longer necessary. Today, all classrooms can be converted to audio-visual rooms inexpensively by the installation of LEVOLOR Audio-Visual Venetian Blinds. These blinds give complete control of ambient light to suit the subject, projector and student activity.

With a LEVOLOR installation, the instructor can at any time and for any subject quickly and easily adjust the classroom light. There's no delay, no need for a special room assignment.

Write for Levolor's invaluable survey report "How Dark Should Audio-Visual Rooms Be?"

No charge or obligation. Write to Audio-Visual Dept., Levolor Lorentzen, Inc., 720 Monroe St., Hoboken, N. J.

Be sure to specify

## Coronet Awards Grant

A grant of \$2,000 has been awarded to Southern Illinois University's Instructional Materials Department by Coronet Instructional Films, Inc. to help defray costs of a research project in southern Illinois schools. The study is being conducted by Dr. Paul R. Wendt, chairman, and Dr. Gordon K. Butts of the Instructional Materials Department of the College of Education at SIU.

The project is designed to increase the productivity of good teachers by attempting to teach a full year of world history in the 10th grade in a half-year with the help of 61 sound-color motion picture films furnished by Coronet. These films were planned as a series and are used in the schools at the rate of one every other day.

Schools participating in the project are located in Sparta, Chester, Cairo, Harrisburg, Benton, Wayne City, and Johnston City, Illinois. Two classes in world history are taught in each school by the same teacher. One class is designed as an experimental class and the other one acts as the control class. The experimental class will finish the course at the end of the first semester with the help of the motion picture films. The control class will take a full year to cover the subject but will see none of the films. The only difference in the instruction between the two groups will be the use of the 61 films and their related study guides.

Each classroom is equipped with a special auxiliary library of 66 books, both fiction and non-fiction, selected by Miss Kathleen Fletcher of SIU's Instructional Materials faculty and provided by the regional library under Mr. Miller Boord located at Southern Illinois University. Data are being collected on the use of this library by both control and experimental groups. Pre and post tests in world history will be administered as well as intelligence and reading tests.

The project is coordinated by Mr. Eugene Cottle, associate professor of education at the University of Wyoming.

The Eastman Company is cooperating with the research program in the use of Pageant Projectors for all the experimental schools.

"Honestly, that's the way it looked!"

## First TV Newscast for the Hard of Hearing

What is possibly the first television news program produced especially for the hard of hearing is being sponsored by Zenith Radio Corporation, Chicago.

"World News for the Hard of Hearing" features sign language expert John M. Tubergen, president of the Alumni Association of the Illinois School for the Deaf, Jacksonville. He works with a newscaster (chosen for readability of lip movement), giving a sign language account as the announcer reads the news.

## Columbus Film Festival

The seventh annual film festival sponsored by the Film Council of Greater Columbus will be held at the Fort Hayes Hotel on April 29 and 30. Beginning at this festival, a "Chris Statuette" award will be presented to the outstanding film in each category. This will be in addition to the Chris Certificates, given for the best films in each of the five categories.

Previews for the films began October 1. Film producers and sponsors are invited to enter any films produced during 1956, 1957 and 1958, provided they have not previously been entered in the Columbus Festival. Inquiries should be addressed to D. F. Prugh, Film Council of Greater Columbus, Memorial Hall, 280 East Broad Street, Columbus 15, Ohio.

## Professional Animation at Michigan State University

The audiovisual center at Michigan State University, under Charles Shuller, has installed an Oxberry Animation stand, similar to those used in professional film production. E. McCoy, head of film production, states that the department's basic aims will be featured by use of equipment truly adequate to the problems submitted by the various university departments. Its first jobs involved animating presentation of statistical results, experiments reported on film, and the making of titles.

## SMPTE's New Officers

Dr. Norwood L. Simmons is the new president of the Society of Motion Picture and Television Engineers. Dr. Simmons is an Eastman Kodak executive (West Coast Division, Motion Picture Film Department). Succeeding him as vice-president is John W. Servies, vice president of National Theater Supply Corp. Servies' former position at convention vice president, goes to Reid H. Ray, St. Paul, Minnesota film producer, who has been serving as treasurer. Two officers were re-elected — Glenn Matthews, Eastman Kodak, Rochester, as editorial vice president and Wilton R. Holm, DuPont Photo Products executive, as secretary.

## Michigan Conference on Instructional Materials

On November 14-15, Michigan's first Cooperative Conference on Instructional Materials took place at the Rackham Building in Detroit's Cultural Center. The meeting, which was sponsored by the Michigan Association of Librarians and the Michigan Audio-Visual Association in cooperation with the Michigan Association for Supervision and Curriculum Development, included reports from the major organizations in the field, how-to-do-it sessions, and addresses by Dr. Frances Henne, Associate Professor of Library Education, Columbia Teachers College, and Dr. Floyd Brooks, former Executive Secretary of the Department of Audio-Visual Instruction, National Education Association.

# At the head of the class!

Using the projector as a blackboard.

**THE OVERHEAD PROJECTOR** keeps the teacher in front of the class, projecting his own slides, facing his class at all times, observing reactions, and adjusting his presentation to the response of his pupils.

There is no need for a separate operator, with an accompanying system of signals. The projector complements the teacher rather than replaces him. The teacher selects his own pace, extemporizing as he wishes; commenting before, during, and after projection.

He uses the screen as a blackboard, writing or drawing at will on slides or sheets of transparent plastic, without turning away from his class. Single or multiple sheets of film are easily superimposable on the slides, allowing the teacher to unmask transparencies in progressive disclosures, or to build up several components into a composite image.

Slides are large (8" x 10"), and easy to make. Rudimentary art skills produce dramatic, colorful transparencies.

If you wish to learn more about the Overhead Projector, please write to Section OP, Visucom Laboratories, Tecifax Corporation, Holyoke, Massachusetts. Please indicate in the letter the nature of your interest.

**People in the News**

Dr. Harry J. Skelly has been appointed Chief, Bureau of Audio-Visual Instruction of the state of California. He was previously Director of Audio-Visual Education for the Madera County Schools and a consultant in audiovisual education to the State Department of Education.

Dr. Kenneth L. Bowers has taken over the position of coordinator of production for the Visual Instruction Bureau of the Division of Extension, the University of Texas. Previously he served as advisor to the communications center of the Area Development Program of the International Cooperation Administration in Chile. Before that, he served as director of the Audio-Visual Center of State Teachers College, West Chester, Pennsylvania, where he taught and supervised service and production of audiovisual materials. He is also the author of three publications of NEA's Division of Audio-Visual Instruction: *Planning Schools for Use of Audio-Visual Instruction; No. 1—Classrooms, and No. 2—Auditoriums*, as well as *College Audio-Visual Programs*.

Elliott H. Kone, Yale University, has been elected president of the Educational Film Library Association, Inc., for the 1958-59 year. The new vice president is Galon Miller, South Bend, Indiana, City Schools and the secretary is Mrs. Carol Hale of the Girl Scouts of the U. S. A.

William G. Kirtley has been named chairman of the 19th annual National Audio-Visual Convention and Exhibit by NAVA President P. H. Jaffarian. A NAVA first vice-president, Kirtley is head of the D. T. Davis Co. of Louisville, Ky., and is a former school superintendent and principal. He will be in complete charge of arrangements for the Convention and Exhibit, to be held in the Morrison Hotel in Chicago July 25-28.

**New Jersey's Gov. Meyner  
Addresses IAVA Meeting**

Governor Robert D. Meyner (left) of New Jersey addressed the Industrial Audio-Visual Association's fall meeting held on October 14 through 16 in Princeton, N. J. He is shown with Frank B. Greenleaf of United States Steel Corporation, president of

the Association. Others who addressed the meeting included Dr. Hadley Cantril of the Princeton University Department of Psychology, and William H. King, Coordinator of Audio-Visual Education for the New Jersey State Board of Education.

**NAEB Proposes International  
Exchange of Materials**

The National Association of Educational Broadcasters, in association with the U. S. Information Agency (USIA), is promoting an international exchange of audiovisual devices to further understanding among the nations. Institutions interested in participating in such a program are invited to write to R. E. Underwood, Jr., 14 Gregory Hall, Urbana, Illinois. The following information should be included:

1. What your institution would have available for use in foreign schools?
  - (a) What subjects are available?
  - (b) At what levels are they aimed?
  - (c) In what languages would they be available?
2. What your institution would desire, ideally, to receive from foreign schools:
  - (a) What subjects?
  - (b) What levels?
  - (c) In what languages?
3. Are there any particular foreign schools with which your institution would like to exchange materials?

**Federal Funds for  
Research Projects**

The U. S. Office of Education has announced that it is prepared to consider applications for Federal funds to assist research in educational television, radio, motion pictures, and other communications media. Inquiries concerning this portion of "AV-864," the National Defense Education Act should be sent to the Director, Communications Media Research Program, Office of Education, Department of Health, Education and Welfare, Washington 25, D. C.

**Kodak**  
TRADE MARK

At the new Fuhrmann Jr. High School in Warren, Mich.—plans of which were exhibited by AASA—John I. Clifton, Chairman of the Audio-Visual Coordinator's Committee for the Warren Consolidated Schools, says:

**“Convenience frees teachers to teach...  
we like it in the design of our school...  
we like it in Kodak Pageant Projectors.”**

“All teachers like the kind of convenience that frees them to *concentrate* on teaching. That's one reason our major activity areas are centrally located in our new school near the administrative office. And the same kind of reasoning led us to select the Kodak Pageant Projector—so *easy* to use that students take care of most of our movie showings.”

Would modern, easy-to-use equipment help strengthen your audio-visual program? The Kodak Pageant 16mm Sound Projector gives you folding reel arms and attached drive belts—a truly easy machine to set up. You have a projector *anyone* can operate with ease. Ask your Kodak Audio-Visual Dealer to demonstrate. Or get full details by writing for Bulletin V3-22.

Kodak Pageant Projector > EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.

**SUDDENLY**  
*they respond...*

when you teach with the  
**AO Spencer Opaque Projector**

**SO EASY** Teaching and learning are much easier with this unique projector. You just flip a switch to project a big, bright picture of your teaching materials exactly the way you want to show them...subjects become dramatically alive...and your class responds as a unit. You teach more effectively because you show what you mean. Learning is more fun this way.

**SHARPEST IMAGE** Coated objective optics cut internal glare and reflection. With the exclusive all-glass reflecting system, this guarantees a sharp, crisp image on the entire screen...edge to edge...corner to corner.

**1,000 WATT INTENSITY** High-powered illumination shows a clear, detailed picture in a semi-darkened room, or even a normally lighted room with shades up. The entire system is cooled by a quiet, motor driven fan... a constant stream of air over projected copy keeps it safe.

**STURDY, PORTABLE** The projector is built of rugged, light-weight, lifetime aluminum. Carry it anywhere. Precision mechanical fitting throughout assures permanent optical alignment.

## Calendar of Coming Events

Feb. 14-19—AASA national convention  
Atlantic City, N. J.

Feb. 26-28—Harwald Co. annual AV  
Cracker Barrel, Evanston, Ill.

Mar. 16-18—Third Medical Motion  
Picture Workshop, Calvin Company  
Kansas City, Mo.

Mar. 22-25—California Association of  
Secondary School Administrators  
Sacramento, Calif.

Apr. 1-4—American Film Festival, New  
York City.

Apr. 2-3—Illinois Audio-Visual Assn  
conference, Springfield, Ill.

Apr. 13-16—DAVI annual convention  
Seattle, Wash.

Apr. 17-18—NAVA Western Confer  
ence, Olympic Hotel, Seattle, Wash.

Apr. 29-30—Columbus Film Festival  
7th annual, Fort Hayes Hotel, Co  
lumbus, Ohio.

May 4-8—SMPTE, 85th semi-annual  
convention, Miami, Fla.

May 6-9—Institute for Education by  
Radio - Television, Deshler - Hilton  
Hotel, Columbus, Ohio.

## Maximum Life From Your Projector Bulbs

H. J. Hanbury, photo lamp market  
ing manager for Westinghouse, likes to  
sell projector lamps, but also wants  
each lamp to give its user full service.  
Among his suggestions on how to get  
maximum life and best results from  
projection and exciter lamps are:

(1) Avoid rough handling. Lamp  
filaments are complex and very closely  
spaced; they are easily damaged by  
abuse. Never move the projector while  
the lamp is lit, except for normal tilt  
adjustment, and avoid operation in  
abnormal position. That spare lamp  
in the speaker case should be well  
cushioned, preferably in its original  
packing or equivalent.

(2) Keep the cooling system clear  
of obstruction. If the projector is  
placed on paper or light cloth to pro  
tect furniture, make sure this is not  
sucked into the air intake opening.

(3) Unless the reflecting mirror  
behind the lamp is properly focused it  
may overheat the lamp.

(4) Be sure lamp rating corre  
sponds to the actual line voltage. A  
115-120 lamp used on 125 volt current  
will have a shorter life although it  
burns brighter. The same lamp on  
100 volt line current will give less  
light but will last longer. Normal lamp  
life averages 25 hours; the range may  
be anywhere from 10 to 50 hours.

(5) Replacement exciter lamps  
should be identical in voltage and am  
perage rating to the original. Devia  
tions will certainly result in inferior  
sound reproduction and may cause a  
burnout.

# Vantage Points

The vantage points we're thinking of are those points of view from which this magazine is edited. We want to make the editorial point that all the editors of this magazine hold unique positions from which to carry on their editorial responsibilities. We think this is a prime reason we have succeeded for so long in meeting the interests and needs of the thousands of you who read us regularly.

Take the Church Department, for instance, (and this is a particularly appropriate time to do this inasmuch as we are giving special emphasis to the church use of audiovisual materials in this issue). Bill Hockman typifies what we mean. He does not sit in an ivory tower trying to figure out what audiovisual problems a church might have. He knows, because he's on the ground floor facing these problems daily; and he's been solving them for years. Through his accumulated knowledge and trial and error experience he has earned full right to the opinions he holds about audiovisual materials for church use, and the use that should be made of them.

Consider also the "Evaluation of New Films" section. Even though these evaluations come to you from a university campus, there's nothing ivory towerish about the vantage point from which "Ole" Larson and Carolyn Guss get their perspective. Nowhere in this country is there a larger, busier, more comprehensive and practical audiovisual center. Here films must be evaluated continuously as a normal part of the center's function; and this wealth of down-right practical experience is shared every month with SCREEN readers.

When Max Bildersee's columns first appeared in SCREEN more than ten years ago they were headed "Record in Review." Now they're called "Sound Advice." But the thousands of words Pat has written to serve you have always been *sound* advice because they have been based upon daily contact with the needs of classroom teachers. This coupled with his personal and discriminating interest in all forms of recorded sounds that teach have provided him with a vantage point unique in the audio field.

Although Dr. Irene Cypher is our newest department editor, she is a veteran educator and prominent professionally in the audiovisual field. Nor has she just discovered filmstrips. In the

past, when no one was watching, we read her words about filmsrips in other audiovisual journals. It was obvious that her contacts with producers and filmstrip users gave her a vantage point to produce words that SCREEN readers just had to have. We're glad we can now bring them to you regularly.

Phil Lewis' title of "Technical Editor" is a misnomer. Through the years he has given us and you assistance in far more than technical ways. Many of his articles, including the first published in September 1948, have been on technical subjects. Then he was an industrial arts teacher, and while he has written for you he has been repeatedly promoted in the Chicago school system until now he directs the Instructional Materials Department. Always his articles on technical and non-technical subjects have been written from the vantage point of a practical and successful teacher and school administrator.

For editing the "New Equipment and Materials" section and the news of the trade we look to and rely upon Bill Kruse's more than thirty years of contacts with manufacturers, producers, users, and everybody with any relationship to the audiovisual field. His experience gives him a qualifying vantage point to speak or write on practically any phase of the field; and whenever he does, it is practical.

This leaves but two of our editors with vantage points undescribed.

Enid ("Micky") Stearn, managing editor, has but recently come to the audiovisual field, and soon the field will be coming to her. Already she is managing to put together a magazine that is improving with each issue; and she is managing to get it to the printer and you on time.

Now, from my vantage point as the Director of Instructional Materials in the Rochester, New York, school system, and as "we," the editor, I know what it means to you in the audiovisual field that we have the editorial staff we do. We're proud of these people.

# Informal Audiovisuals

## Can Enrich

*by Dr. R. Boeke*  
Pastor, Dutch Protestant League,  
Rotterdam, Holland

**U**SUALLY we are so busy seeking audiovisual aids for our Christian teaching that we pay too little attention to the materials around us which (can) illustrate the life and practice of other faiths and religions.

Preoccupied with our preaching and church activities, we cannot roam around seeking examples of devotion in other fields. Many of the objects which could instruct us are in foreign countries. These may be difficult to come by, but right close to home we can find useful things. Many teachers have given no thought to these.

It is important to get information about religious life and practices not our own; to go beyond our own well-known customs and forms. Thus, for the people of Holland, the American way of church life may seem strange. We are not used to flags in churches and to choirs in vestments. On the other hand, a recording of a church service in some part of Europe may sound very strange to American ears.

There are, of course, quite a number of motion pictures showing religious ceremonies. When the new Pope is crowned, all the world sees it in cinema. Well known to many screen viewers here and abroad are film pictures of the

# Religious Understanding

progress of the state of Israel. Some of these show aspects of religious life.

But, when more specific information is wanted, we need to give special attention to this subject, and we will often be amazed to discover how plentiful illustrative material really is.

When in the United States I had a unique opportunity along these lines. In so many cities I found religious communities with their origins in foreign and distant lands. Often they were ancient. From members of such groups I got valuable and reliable information. Thus, I gained a new outlook on their worship and customs. Often I was given permission to take photographs. At other times I found stocks of pictures for sale and for lending.

Places of worship are visual aids to knowledge. They may be close by, if you will but seek them out. In New York and San Francisco and other cities you can find Chinese temples. Here in Holland you can visit the Mosque at The Hague. Synagogues and Jewish temples can be found in many places. Attendants and Rabbis are always glad to show you The Scroll of The Law, and ceremonial objects. Stained glass windows speak

to all who can "read" them, and they will tell their stories to all who will practice reading this visual aid to religious inspiration and understanding.

Shrines and museums offer visual aids to all who will go to them. In Canada, for instance, you can visit St. Joseph's oratory in Montreal. In Toronto there is an immense totem pole sacred to the Indians. Here in Holland you can see some fine examples of Buddha images, and view treasures from ancient Egypt in the Lyden museum. In Germany, at the town of Marburg in Hesse, in an old castle atop a mountain is a great collection of rare models of religious life and manners from all over the world.

Those who cannot travel afar may make discoveries in their own neighborhoods. Thus, in the Greyhound Bus Station in Syracuse, N. Y., I came upon a machine dispensing coins with the Lord's prayer upon them. In a big department store I saw a great display of rosaries, crucifixes, and holy-water fountains, and a gilded bracelet emblematic of the Ten Commandments. In the coat lapel of my seat-mate on a train was a symbol of the Twelve Tribes of Israel. Thus, look and ye shall see!

Some may wish to gather such

things into a filmstrip; others into slides; and still others into a collection — for whatever purpose and use they have in mind. If this is too roundabout, a short-cut will be to go to books and magazines (such as *Life*), and to journals of religion and architecture. A wealth of materials awaits you. When you select and put them together, be attentive to contrast and climax; and as you work at it you will be stimulated and gratified.

Or, if you tire of the visual, you can turn to the auditory. Try Handel's "Largo," or some Christmas carols, or a disc of the liturgy of the Community of Taixie in France. Or, listen to the call of a muezzin from a minaret high over a Mosque. Thus in all these ways, and many more, visual and audio aids can enrich and broaden your religious understanding.

---

*(Pastor Boeke is a Doctor of Theology. In 1957-58 he traveled and studied in the U. S. Deeply interested in visual education, he studied at Syracuse University, and attended the International Conference on Audio Visual Aids in Christian Education at Penn State University.)*

From "Mid-East Profile," produced for the Commission on Missionary Education by Film Productions International.

THE religious film librarian knows from experience that the coming of Lent brings with it the biggest peak in church use of motion pictures and other audiovisuals. In times past, when suitable subjects were few and prints thereof still fewer, this was a time of great frustration for the librarian who sought to meet this seasonal demand. Today there is an almost infinite variety of suitable films and filmstrips, slides and recordings as well as a more nearly adequate supply of copies of all but the extremely costly highly seasonal subjects.

Churches have developed a broader range of demand also. While interest in Biblical subjects still ranks first, there is an increasing tendency to supplement this type of demand by use of materials stressing *application* of the teachings of Jesus and personal dedication to His work. In our own church, for instance, there will be a series of six week-night supper meetings, followed by a 45-minute period devoted to the showing and discussion of a film on the general theme of "Facing Your Day-to-Day Problems as a Christian." Individual topics, a different one each week, include Christian attitude and behavior on the job, in the home, the church, in leisure pursuits, in decision making, and on

the part of youth. This discussion continues until it is time for the evening worship service.

In another local church a similar series of family nights is given over to a film and discussion of selected Biblical "incidents" in the life of Christ. There is a wide choice of materials for this type of program in the extensive series produced by Family Films (*The Living Bible*), Cathedral Films (*Living Christ*), the Concordia filmstrips and others.

Today no church worker need be at a loss to know what materials are available for almost any purpose in the total work of the church — nor of where and how to get them. In and around Chicago, for example, there are at least 20 sources engaged in renting religious films, and in many instances also in the sale of low cost audiovisuals, such as filmstrips, slides and recordings. Well-qualified audiovisual dealers stand ready to demonstrate, counsel and sell any item of equipment a church may need.

Any active religious film library has descriptive catalogs and other material that not only list titles and prices but offer many useful suggestions on utilization. The leading film producers offer utilization aids and descriptive lists of their materials keyed into the church calendar. These are obtainable without charge either from local

rental libraries or direct from the source. Denominational, interdenominational and commercial libraries offer joint access to products from numerous sources.

Especially in meeting peak seasonal demand, such as that during Lent, libraries are known to serve one another's customers so that all locally available resources will be in use. Producers make reserve stocks of seasonal subjects available to libraries all over the country to help take care of seasonal peaks.

As in many other fields, the major hurdle between user and source is that of *communication*. A film rental catalog must get to the right person, at the right time, so that he can order the right film, from the right source, and use it right, for the right purpose. Catalogs alone are not enough. A "new" catalog is usually out of date even before it goes to press.

Denominational publishing houses play a major role in keeping their affiliated churches informed of audiovisuals that correlate with their special emphases and their curriculum time tables. Religious and audiovisual magazines publish monthly lists of new materials, as well as reviews, usually constructively critical, and utilization suggestions.

Local councils of churches can do much to acquaint their member congregations with what audiovisuals are available and how to use them to strengthen their churches. In The Church Federation of Greater Chicago there is an Audio

Below: "Triumph and Defeat," Episode II of Cathedral Films LIVING CHRIST series.

Visual Committee attached to the Department of Christian Education. Among its activities is an AV Preview Evening, held monthly downtown in the Chicago Temple, where the Federation's offices also are located. An approximately 2½-hour program of motion pictures and other new materials is shown on a theme usually dated a month in advance of major emphases or calendar divisions. Thus, in January, the theme was "Brotherhood," February "Lent and Easter," March "God and His Word," April "Family Life and Mental Health," May "Summer Activities and Camping." As part of the Federation's centenary observance, the June theme will be "A Century of Audio-Visuals." In other cities, such as Milwaukee for instance, similar periodical previews are sponsored and arranged by some especially active film library.

However the group is brought together, this meeting of supplier and user is of major mutual benefit. Each learns the needs and problems of the other. Both have a chance really to look at the new offerings that producers will as a rule submit without rental cost or obligation. A lively moderator can spark an intensely interesting and productive audience-participation experience. Such previews can usually be arranged at surprisingly modest expense, in a well-located church or in a dealer or library projection room. The principal cost of this type of communication project is for—communication!

# Use AV During Lent!

Family Films.

# How to Plan Film Series

by Eunice Schmidt  
Visual Aids Department,  
Baptist Book Store,  
Oklahoma City.

**P**LANNING the use of films in series is more than possible. It is practical. Denominational planning is done in one-year, three-year, and four-year cycles. Bible teaching is generally planned on the basis of a three-month quarter.

**Mid-Week Series.** Some years ago a pastor in Southern Oklahoma became alarmed about how few people came to the mid-week service. I suggested a Bible study series: the Bible is central, people want to hear what God's word has to say, they want help in finding His will for their lives.

This pastor set up a series: "What Does God's Word Say to Me?" Cathedral's 12 filmstrips in black and white, *The Life of St. Paul*, became the heart of the study. His own narrations, timed to 20 minutes, were recorded on tape. For this he did research and study, which paid off. Years later people were still talking about how much they learned from this series. They had both seen and heard. Paul became alive to them. Church history was vital.

**Life Of Christ Series.** We have urged pastors to use the Church-Craft *Life of Christ* filmstrips. There are 24 in this series, all in color. Many pastors begin this mid-week study in December, with prophecies of the coming of the Messiah, and continue to Easter. Of course selections must be made. Some pastors have set up short series on the Miracles or the Parables. Using this audiovisual resource, individual preferences and needs can be met.

**Old Testament Series.** In this area of the Bible, series have been built on such themes as "Great Men of the O. T.," and "How God Spoke To Men In O. T. Times." Other pastors have developed series on "The Life of Moses," "The Life of Joseph," and on "The Prophets and Their Problems." Then as now people had deep spiritual and political problems.

**For Youth.** Young people are confronted with questions of right and wrong. Church counsellors of youth, and adults, have found answers to many profound religious and moral questions in the "Living Bible" series of motion pictures. *Jesus, Lord of the Sabbath* can lead a group into a discussion of the uses and abuses of this day in our times. *Jesus Teaches Forgiveness* can crack open the subject of forgiveness and getting and receiving it—from God, parents, and friends. *Jesus and the Lepers* has a lot to say on kindness and the grace of thankfulness. *Thirty Pieces of Silver* can be used to ask, on what values are you building your life?; or, was the

motive of Judas dastardly or distorted?

**Old Testament Films.** Concordia's Old Testament motion pictures are being used in many ways by our customers. Some relate them to the O.T. curriculum unit. They are geared to the lessons Sunday by Sunday. Another church used them with the young people on Sunday morning in a series, "Men Led By God." A men's club used them in a "Great Men of The Bible" series. In a rural church, they were used, one every two weeks, in a series of devotional services to bring drama and climax to each.

**With Children.** Our users have related the "Our Children" series by Family Films to their work with problem children and teenagers. These 15-minute films ask and answer questions effectively. They are so specific that all sorts of series can be arranged with them. The same applies to the Moody "Bible Adventure" series. The problem is in seeing the series possibilities in such materials. This is where I can help my customers, by passing along what others have done with them. This, however, is no substitute for each one doing his own thinking and planning.

The central theme of a series gives direction. It concentrates interest. It increases impact. It makes for more work, and yet it may even mean less work in terms of the results obtained. When we show as well as tell what the Bible has to say, we are working with the grain of the mind, not against it. This seeing and hearing is just about the "universal language."

**Teacher Training.** Many churches have used the "Teacher Improvement" series of the Southern Baptists. It is practical, yet based on sound educational and spiritual principles. Family Filmstrips, Inc. is about to bring out a Training Kit. This unit of four sound filmstrips ought to fill a real need in motivating the use of audio and visual materials in the local church, and in showing just how it is done.

Moody has a series on "Know Your Child." Every teacher will find it useful in deepening her understanding of what the child is like in his stages of growth. Parents, too, need to be instructed by this series. Here and there church leaders will see the enormous value of these series. In them much of the planning has been done. It is *use* that is left to us.

# Films Should Be Tested

————— Questions on facts.

- - - - - Questions on central truths.

**Scores for Three Religious Films**

by **LeRoy Ford**, Production Supervisor, Audio-Visual Aids Dept., Sunday School Board of the Southern Baptist Convention, Nashville, Tennessee.

**I**T is impossible to make an effective study-guide without first testing the materials with the age or interest-group for which the film was prepared!

In two successive summers the author has tested the effectiveness of three Bible films used with two separate groups of junior-age (grades 4, 5, 6) boys and girls. There were 75 juniors in the first group and 132 in the second group. While all juniors did not take all the tests, some 450 test papers were evaluated. The tests were given under similar conditions in actual teaching situations. Factual questions, and questions relating to the central truths of the films, were asked. No thought was given to compiling the information in report form until after the scores revealed some alarming information. Here are some of my conclusions.

**Unlearning.** A film on Samson, in addition to dramatizing the story, specifically attributed Samson's strength to God; yet only 13 of 140 pupils caught the significance of this. Most of the 127 who answered incorrectly said Samson's strength came from his long hair. Similar responses in similar films indicate that *much information which has been learned in previous years must be unlearned if teaching with films is to be effective.*

**Prior Teachings.** After seeing a film on the call of Moses, the boys and girls were asked, "How can you find out what God wants you to do or to be?" The film gave two answers — prayer and Bible reading. Of the 60 juniors tested, 47 percent gave prayer alone as the answer, 25 percent gave Bible reading alone, and 15 percent mentioned both Bible reading and prayer.

The neglected emphasis on Bible reading in previous training may have been responsible for the low scores. Would we not be safe in concluding that *in cases where previous training has emphasized only one of two associated truths, the retention value of the less familiar idea is reduced?*

**Drama is Not Enough.** Of a group of 66 juniors who saw a film pertaining to Naaman, only 40 percent could answer this question on the central truth: "Why did Naaman hesitate to do what the prophet told him to do?" Only 44 percent could make the application implied in, "Why do so many people hesitate to believe on Jesus?" *We may conclude that dramatization and statement of central truths do not necessarily guarantee assimilation.*

**First Fact Sticks.** In the film presenting the story of Samson, definitions were given, in quick succession, of a Nazarite and a Philistine.

Sixty-four percent of 140 juniors answered the first factual question correctly, but only 39 percent could define a Philistine. *It is concluded that in the presentation of facts in quick succession the first fact presented is apt to have more retention value than subsequent facts.* In this case the subsequent fact was relatively unimportant but the results would have been similar if the fact had been vitally important.

**Film Effectiveness Varies.** It is evident that similar films with similar formats may vary in their effectiveness. The accompanying graph shows the relative effectiveness of the presentation of basic factual material and central truths in three films — A, B, and C.

It will be noted that retention of facts is considerably better than detection of central truths. Whether there is significance in the parallel in retention of facts and central truths might be debatable. However, on the basis of the 450 tests used in this study, it seems that weakness or strength in one area indicates a corresponding rating in other areas.

No film is pedagogically perfect, and in the hands of a poor teacher it becomes even less perfect. Film effectiveness could be improved by use of guides based upon a testing program involving the age group for whom the films are designed.

# ... Not Born

## *A brief history of the use of AV in the churches.*

**B**IBLICAL subjects are always difficult to photograph, since theologians are quick to detect flaws in text matter and misinterpretations of commonly accepted versions of Biblical events, varied according to denomination and personal opinion." This quotation might have come from the new 4th Edition of the *Audio-Visual Resources Guide*, just off the press. It is taken, instead, from the laudatory evaluation of a new motion picture, "Creation," in the magazine *Reel and Slide*, July, 1919.

The debate between strict Scriptural adherence and interpolation apparently was not born yesterday. In this three-reeler produced by Atlas Educational Film Company, of Oak Park, Illinois, for Lutheran Churches of America (sic), a compromise was apparently sought. In his scenario, the Rev. O. Hagedorn, Milwaukee clergyman, embellished the story "taken almost literally from the first two chapters of Genesis" with some highly dramatic episodes not found in the Bible. Abel's "devotion to one of his younger sisters" sets in motion a chain of envy that contributes materially to the murder. He makes the mistake of giving one sister a necklace he has made of shells; the other steals it from her and "with feline cleverness the guilty one confides to Cain that Abel is unkind to her. . ." thus fanning "the already burning flame of hatred he bears his brother." "The hate which fills his heart acted as a bar to his sacrifice being accepted by the Lord" we are told.

Special interest in early developments of audiovisuals for church use was stimulated by preparations for the observance of the centenary of the Church Federation of Greater Chicago. The city's

leading status as a center of manufacture, production and distribution of projection equipment and materials was established at a very early date. Looking backward, the Audio-Visual Committee of the Federation's Department of Christian Education found historical background of considerable interest. Looking forward, it has won support for its proposal for a survey of present and potential AV activities of the numerous federation departments with a view to the establishment of a central audio-visual agency, with adequate professional personnel, that would serve the total work of the Federation in all its ramifications, very much as is done in such bodies as the National Education Association, and the medical and similar professional organizations.

Until just before the turn of the century it seems evident that Chicago area churches, like the schools, made use of flat pictures, stereographs and "Magic Lantern" slide projection. This was just about the extent of visualization then.

These glass slides came in many sizes, they were often hand-colored, and in some cases involved ingenious tricks to create an illusion of motion. Actually today's motion picture is itself an illusion of motion, each frame stationary on the screen, but shown in such rapid sequence that the eye cannot erase one image before it is modified by the next. As far back as 1870 "moving" pictures of acrobats and dancers were shown in a church Men's Club by means of glass slides projected in rapid sequence. At least as far back as 1902 central slide sets began to be established; the Methodists', under Dr. S. Earl Taylor, numbering over 60,000. The glass slide developed to the point

where it was shown outdoors on a screen 100 feet wide (at the Methodist Centenary Convention in 1919).

Slide lanterns used lime-light, kerosene, carbon-arcs and finally incandescent lamps as illuminants. The "Optigraph," one of the earliest motion picture projectors, manufactured in Chicago, was frankly an attachment to a "Magic Lantern" lamphouse. The 1898 Sears-Roebuck catalog devotes an entire page to the idea that by investing \$35 for the machine (\$20 extra if with lamphouse) and a modest sum for 50-foot film subjects run at 40-frames-a-second, an "operator" could earn from \$20 to \$50 every evening. The films were silent, so each was accompanied by a complete descriptive script "interspersed with witty jokes and funny sayings."

Motion pictures were originally all short incidents with novelty as their chief appeal. Among the first to break through the short reel barrier were five different "Passion Play" productions made respectively in Bohemia, Manhattan, Philadelphia, and in the Holy Land.

Chicago at the time was second to none in film production and distribution, as well as in projector and camera manufacture. The leading nontheatrical field magazines, *Reel and Slide* (1918), *Motion Picture Age* (1919), *Visual Education* (1920), and *The Educational Screen* (1922) were all published here. Their files disclose some very interesting religious film production ventures, such as the one detailed at the start.

Another example seen in the first missionary film produced (1919) by the Presbyterian Board of Foreign Missions, 1813 Stevens Building, Chicago, is described by

# Yesterday

by **William F. Kruse**  
Archivist, N.E.A. Department of  
Audio-Visual Instruction

its Central District Secretary, the Rev. Charles E. Bradt. "The Problems of Pin-Hole Parish" cost \$10,000 to make; its six reels could be shown either at one sitting, as a feature, or serially in six chapters, preferably at a Church Missionary Institute lasting several days. Fourteen clergymen were members of the cast, 11 of them from Chicago and Evanston. Mr. Bradt played the lead—a narrow-visioned new pastor who opposes missionary activity because he feels he has better use for the money at home but who is shown the error of his ways by his own wife.

"A six-reel movie . . . showing how a men's Bible class rejuvenated a church" was shown to delegates from various such classes on April 12, 1919, according to Dr. Robert R. Biggar, of the Cook County Sunday School Association. He disputed a statement by Prof. E. W. Burgess of the University of Chicago to the effect that the movie had displaced the church as a major influence on child life, and urged running "rival movie attractions in the churches on weekday nights." Bishop Samuel Fellows also questioned the charge and is quoted: "As to the presenting of movies by the church, that is all right in theory, on week nights, but requires more funds than many churches have."

Early reports on church use of films seem to indicate that rather than cost money, motion pictures were intended to make it for the church. Either directly, as for a church building fund in Peoria, or by increased attendance. An increase of 500 percent was credited to film showings by Rev. G. H. Ashworth, Sycamore, Ill. Conversely, the Rev. W. C. Godsell was reportedly made to resign his

Heavy wooden frames held the large lime-light projector slides.

Magic lantern slides came in many sizes.

Slide projector with triple-wick kerosene light.

Hand-cranked 35mm motion picture projector (Victor).

pastorate in the Westfield, Illinois Congregational Church, on the ground that his showing films taught the boys of the church to "emulate cowboys."

In 1937 the International Council on Religious Education set up a committee on audiovisual education and ran a workshop at the 1938 Quadrennial Convention. Three years later an AV department was formally constituted, the expenses for the first three years being paid by the Harmon Foundation. Rev. William L. Rogers—originally on the Harmon staff—headed the department until 1942, when he moved to New York to manage the newly formed Religious Film Association. His place was taken by Dr. Mary Leigh Palmer, under whose direction the first International Workshop in Religious Audio-Visual Education was held—at North Park College—with 25 states and Canada represented by members of 25 denominations.

It was subsequently held at Lake Geneva and then at Green Lake, Wisconsin. Miss Pearl Rosser headed the department, now Dept. of Audio-Visual and Broadcast Education, National Council of Churches, until headquarters were moved from Chicago to New York, whereupon she became the first director of radio and TV for The Church Federation of Greater Chicago.

In no way can the growth of service of audiovisuals in the work of the church be measured as effectively as by the phenomenal expansion of film and other resources available to the religious worker. In 1909 George Kleine's "Catalog of 1000 Educational Films" listed only 27 "religious" titles; in 1942 the first Religious Films Association catalog listed 250; in 1958 the National Council's "Audio-Visual Resources Guide" classifies, describes and evaluates more than 2,500 AV items previously evaluated by local committees.

This is not merely a numerical growth. In the early days a lone cameraman could go forth and make his own idea of a religious film single-handed; today professional studios, skilled writers, theological consultants and experienced curriculum utilization stalls combine their skills. The hand-made glass slide of old has been augmented by communication tools too numerous to count—films, slides, records, tapes, transparencies, radio, TV and many more. The seed of the AV pioneers has truly brought forth bounteous fruits.

# Films Represent America Abroad!

*This article appeared under the title, "Influence of American Films Abroad," in the Christmas issue of the BFC NEWS, publication of the Broadcasting and Film Commission of the National Council of Churches of Christ in the U.S.A. It was taken from a report of a committee appointed by an agency of the American Baptist Convention, which has accepted it.*

TWO years ago, at the meeting of the American Baptist Convention in Seattle, a resolution was offered from the floor concerning the influence of American motion pictures abroad. It was referred for study to the Convention's Council on Christian Social Progress. After two years of study, the Council has now made its report.

The resolution which was referred for study read: "Some motion pictures which are sent abroad are a libel on the ideals of the American way of life and often are also highly salacious and sordid. Because of this, we respectfully urge our government conscientiously to censor all American pictures sent abroad and thus implement every effort being made to establish an influence toward decency in the entertainment world and also to show the wholesome, finer side of life in the United States of America."

The Council dealt first with the issue of censorship. "Any resolution calling for censorship," it said, "appears as a threat to freedom. As Americans we treasure highly the freedoms enjoyed under the Constitution. To censor is to suppress. If we must choose between the freedom to propagandize and a totalitarian control of the channels of communication, we will choose freedom with its risks rather than censorship with its possibilities of enslavement."

In its report the Council goes on to say "It is also evident that a number of good films are sent abroad, films that depict our democratic institutions at work, films that entertain without offense, films that show the struggles and hopes of all people. Yet, these values to a considerable extent, are negated, according to reports, by an undesirable emphasis on the material prosperity of our country, the "typing"

of racial groups, the excessive use of alcoholic beverages, the ridiculing of courts of justice and law enforcement agencies, the over-emphasis on crime and the display of sexual vulgarity.

"These deplorable exaggerations are no cause for self-righteousness on our part. We must see them first as a reflection of admitted moral weakness in our culture. We must face the fact that motion pictures do reflect what is evil and shallow in American life. Here the indictment is upon us. We cannot expect to hide our sins from our foreign neighbors. Yet, the frequent dramatizing of those weaknesses on the screen has left the unintended impression that they represent a typical America. There is lacking sufficient emphasis on the wholesome aspects of our culture.

"There is also the problem in any medium of mass communication of being misunderstood in moving from one cultural context to another. Even where films are intended to expose social evils of our country, there is a lack of perspective when they are viewed in another setting. Differences of background and custom account in part for the offense which some motion pictures bring to the people of other cultures in the following areas: the portrayal of promiscuous relations between the sexes, the caricaturing of peoples of other races, the stressing of force and violence and the exploiting of juvenile delinquency.

"On what basis are films selected for foreign viewing? For the most part the pictures sent abroad are the same as those seen in the United States. The only selection for foreign viewing is made by exhibitors and theater owners abroad. According to the Motion Picture Association of America, theaters abroad want principally the pictures that

have won popularity here. This means that the same standards and controls for the production of motion pictures in the United States determine what is seen abroad. . ."

This particular study, the Council says, "has pointed to the simple and obvious conclusion that the central issue is the quality of American films. . ."

The report makes seven recommendations. Three of them counsel further study and recommend that "steps be taken to effect a more positive cooperation with the Broadcasting and Film Commission of the National Council of Churches and other church related agencies concerned with this matter." A fourth recommendation calls on the American Baptist Convention "to request the State Department to evaluate the effects of motion pictures abroad and to seek ways of correcting any destructive influences such motion pictures may have."

The three remaining recommendations are that American Baptists "refuse to patronize undesirable films and give their support and commendation to the best productions, stimulate the production of better films, encouraging creative writing of scripts and dramas," and "to encourage a wider use of suitable audiovisual materials on foreign mission fields for entertainment as well as for education and evangelism."

The report concludes with this timely reminder:

"The influence of American movies abroad is only one aspect of a larger problem, the influence of Americans abroad. . . . The quality of our influence is seen in every expression of our culture. Our responsibility is to exert a Christian influence on every expression of our living both at home and abroad."

## Preview and Selection

There are seven basic steps in the utilization of a filmstrip, and the first is selection and preview. As a cornerstone to a fence, so is it to the other six (study, conference, rehearsal, presentation, follow-up, and evaluation).

For the leader, the journey will be teaching; for the child it will be learning, and the first step is Selection and Preview. Her deepest reward will be joy in seeing the tree of teaching bear fruit; for the pupils it will be the joy which comes from picking the fruit of information and knowledge. And, all of this depends upon this first step in the seven-phase teaching-learning continuum.

Just what is the teacher in our picture doing? Basically, she is previewing filmstrips. But she is doing more than just looking at filmstrips. She is working with a view toward making a selection. Before her are several filmstrips. From among the materials available she must make a selection.

To do this she must go deeper than the titles. She must go beyond what the producer says about his materials, as reliable and important as this may be. She may go beyond what the AVRG says. (Of course it can't touch the very latest materials, hot out of the lab.)

Teacher previewing filmstrips.

In this previewing-with-a-view-to-selecting, what will condition her final selection? A full answer would require a small book! Stripped of the leaves, here is the stem of the matter: she will be conditioned by her total experience with filmstrips, by her knowledge of the medium *per se*, by what she intends to do, by the pupils she is going to do it to, by the facilities and equipment available, and by the range of the materials before her—and many other factors. Even stripped, this is a pretty hefty stem!

Let me sort out one or two of these factors for special attention here: "range of materials" and "prior experience." For you these may not be the most important. I highlight them because they tend to be neglected.

**Range:** This worker will not use what she does not know about. That's basic. In this case she will not use what is *not* there. Thus, her selection process may lack range. She may select eventually what fits her purposes and her pupils poorly, but better than any other material before her. She may wish a better fit to her specific teaching objectives. If the range of materials is restricted, she may be defeated in this laudable try.

What does this mean? Certainly at least this: churches ought to provide as much range in their materials as possible. Restricted buying may seem the best policy, but is it? Now and again churches want to buy one of a series, when it is the whole series that gets the subject covered. Frugality can be frustrating. If there is no or little choice, how can selection be vital?

Again, it means that some of our best teachers give up. They just won't pull a filmstrip down over the mind of a child like an out-size cap over his ears. Primary children need "clothes" their size, whether garments or filmstrips. Your careless teachers may not care; your best ones will. A too-restricted filmstrip library may eliminate them.

**Experience:** This is the private and personal and powerful context of the whole situation. If your teacher has received help, guidance, and encouragement, this has qualified her expe-

rience. But even more basic have been the concomitants of the prior teaching situations. What deposit of satisfaction or dissatisfaction was left by the last use? Many things enter here, and factors will vary in importance. For many teachers it will be inability to handle and control all the important physical factors of the teaching situation: poor equipment; poor black-out; poor acoustics; poor screen; poor projector stand; poor play-back — poor! poor! That kills teachers off!

Not-enough-time gets them down, too. First, not enough time is allowed for the utilization; and second, that precious order of service just could not be changed! At the climax, inattention held every one in its grip. The whole performance became un-zipped, spilling all over the place! Too little time! Unless teachers are given adequate time for the utilization of filmstrips, they simply carry water in a sieve.

**Conclusion:** build up a library adequate to your needs and large enough to afford your teachers some real range of selection; and, watch out for the things which are determining the basic attitudes of your teachers toward the whole process of audio and visually enriched education in church, synagogue, and school.—WSH

## AV Training Kit

For some time we have needed "a self-contained, visualized course of study dealing with the principles of audiovisual methods in the local church." Along about 1946 I outlined for *Church Management* a course of study on audiovisual aids for ministers, and at that time there was so little relevant material in print that I had to supplement the course outline with my own material in mimeographed form. This material became the basis of my book, *Projected Visual Aids In The Church* (Pilgrim Press). In 12 years we have come a long way in the church field.

Now we have a four-unit audiovisual kit. Organized and written by Donald

R. Lantz and Paul R. Kidd of Family Filmstrips, Inc., it was produced by this concern. It bears the title *Training Kit for Using Audio-Visuals In a Church*, and the four units are: "Why Use Audio-Visual In Your Church?," "How To Use Filmstrips In Your Church," "How To Use Motion Pictures In Your Church," and, "How To Organize For Audio-Visuals In Your Church."

Each filmstrip has a recorded commentary on one side of a 12-inch record, a printed script, and suggestions for the user. With the first filmstrip there is a four-minute excerpt from the motion picture, *The Rich Fool*. It is nicely integrated and effective.

This kit, in the words of the producer, has at least four purposes: a) "to motivate interest in the use of audiovisuals in your church; b) to provide an understanding of the basic philosophy and educational values in audiovisual methods; c) to suggest specific ways audiovisuals can be used in a local church with various age groups and for a variety of purposes; and d) to outline the administrative policies needed to establish and maintain interest in the use of audiovisuals in the local church."

Can this kit accomplish these objectives? My answer is yes, properly used, it can do the job. And the guide contains some very practical suggestions on "proper use." No one needs to stumble and bumble about.

Here is a course, a short course it really is, for conferences, training schools, institutes, leadership training schools, skillshops, pastor's conferences, college and seminary classes. Within any academic "hour" there will be time for the effective use of any of the four units. The number of frames and the running time is, respectively: 56 and 12 minutes; 68 and 9 minutes; 64 and 9 minutes; and 77 and 14 minutes. Thus plenty of time is left for readiness and follow-up.

What about content? In my book they get an "A Plus." They hew to their purposes. They stick to the important matters. In theory they are sound, and in methods they are practical and realistic. They know the local church (both having worked in it) and they know visual aids, and now we can say they know how to organize a know-how kit.

On the technical side the recordings are good all the way. There is an inaudible 30/50 cycle automatic frame-advance signal on the records for automatic projectors. A deliberate pause in the narration indicates frame change on manual projectors.

The "art" is in color, and it is stylized representational cartoon drawing of a very pleasant variety. A small

# The Powerful Spiritual Impact of **EASTER**

*Dramatic  
Full-Color  
Filmstrips*

**BEAUTIFULLY PORTRAYED WITH LIVE COLOR PHOTOGRAPHY**

Three NEW kits of Family Filmstrips for Easter, photographed in breathtaking color during the filming of the television drama, "Power Of The Resurrection." No expense was spared for this lavish production, which utilizes beautiful sets, authentic settings and costumes, as well as the most outstanding actors.

The filmstrips meet three different needs in your church: "The Bible Story of Easter" is strictly scriptural for teaching; a more dramatic, yet Biblical, story is found in "Peter's Resurrection Faith"; and, "You Shall Receive Power" is for inspiration and devotion.

## THE BIBLE STORY OF EASTER

### Part 1. "Cup of Sorrow"

Final events in Jesus' ministry move to a dramatic climax in the Last Supper, arrest, trial and Crucifixion.

### Part 2. "Day of Gladness"

Lost hope is regained with the Lord's Easter morn and later appearances, and the challenge of the Great Commission.

Kit of 2 color filmstrips, 12-inch 33 1/3 rpm record (2 narrations) and leader's guide.....\$16.50

## PETER'S RESURRECTION FAITH

### Part 1. "Peter's Failure"

Peter's boast of allegiance at the Last Supper changes to a denial of his Master in Caiaphos' courtyard.

### Part 2. "Peter's Victory"

Jesus' Resurrection appearances lead to Peter's forgiveness by the lake, and new power received at Pentecost.

Kit of 2 color filmstrips, 12-inch 33 1/3 rpm record (2 narrations) and leader's guide.....\$16.50

## YOU SHALL RECEIVE POWER

A devotional filmstrip dramatizing the power of the risen Christ in the lives of His followers.

Color filmstrip, 12-inch 33 1/3 rpm record, and leader's guide.....\$10.00

fly in this excellent ointment is the multiple use of certain frames within the same filmstrip and within the series, when the concept being presented really needs a new visualization.

While we have had films and filmstrips on the know-how side of audio-visual teaching and learning, here is the first kit which attempts to cover the principles and methods of use and administration in the local church. It is a fine job all the way, and we recommend it highly to the AV leaders of the church field and to local churches. —WSH.

(Price for the complete kit, \$16.50.)

## Let's Use the AVRG

Buying it, even at the bargain price often dollars, is not enough. Let's use it. Consulting it every now and then is not enough. Let's put it to work. What will we use for harness? What gears will hitch it to our load?

This morning, December the 15th, I have two ideas. One concerns what I am going to do; the other what dealers and rental library people can do — as I see it.

**In My Church.** In our church AV catalogue I am going to insert a new reference number. It will be the page reference in the AVRG where that title can be found. Thus, our film-

strips will have reference numbers like these: B-22, S-293, R-42; AVRG-190. Now the user can locate that filmstrip in drawer B, position 22; the script in file No. 293; the record in envelope 42, and complete, detailed, and authoritative information on content and technical qualities on page 190 of the AVRG.

It will be used in another way. Our Winter AV Utilization Bulletin is past-due. It will have four sections: materials on Lent, Palm Sunday and Easter, Missions, and those relating to the curriculum of the church school.

Under each section we will list the titles, and follow them with a thumbnail statement of content, emphasis, age-level, and context of utilization. This information would come from the AVRG in many instances. Then would come the location data, as given above. Now the worker knows where she can get more information on just the titles in which she is interested.

**One Step Farther.** We will go one step farther. The Bulletin is not enough. We will remove from the permanent files this material and the scripts and records. It will be placed in the drawers of a special preview-table. On it will be a filmstrip previewer, a record player, and the AVRG. This saves time. It saves mixups.

In the drawer, these filmstrips will be bunched according to age-levels, a further assist to leaders. Located like this, any leader or teacher can preview, study and prepare at her convenience. When these seasonal dates pass, the AV librarian can check the materials and return them to the general files.

**Now For The Local Dealer.** If I ran a local AV rental or sales concern I'd relate all my stuff to the AVRG (where possible). Many churches will have this "bible" already. Others will find they must get it. This is a fact that I would utilize in my service and promotion program. Here's how.

I would get out special lists of materials for rent or sale. I would say that I have these AVRG titles. That's where the accent would fall. These special lists make sense. Depending only on a general catalogue is like blazing away at the landscape. You will hit it, to be sure, but you'll not get much game.

One of my bulletins might bear a title like this: "AVRG Titles Useful In The Spring Quarter of the Presbyterian Curriculum." Under this I might put, "Read About Them In Your AVRG and Come To Us For Purchases and Rentals." Curriculum brochures can be secured from denominational headquarters, or borrowed from a local church with whom you do business.

Right now would be a good time to mail out to the local churches you serve a little folder, "Our AVRG Films For Lent And Easter." Another: "AVRG Filmstrips For Palm Sunday and Easter." In all this you would give the page reference in the AVRG.

Later on I might get out other bulletins listing AVRG titles in relation to Children's Day, to vacation church schools, to youth camps and conferences, to leadership training schools, and to the summer quarter of curricula, and to the general mission themes.

About now the half-convinced reader will be asking why all this reference to the AVRG. I'll give you several reasons. First, the AVRG out there in the local church provided the user with a fairly satisfactory substitute for previewing. This is a need he feels before both purchase and booking. Next, you don't need to elaborate in your printing and duplicate descriptive material already in the AVRG. Further, this AVRG is authoritative. It is objective — as objective as any resource can be in this field. Church leaders now recognize this, or will soon come to do so. Lastly, you can capitalize on this AVRG integrity, and in doing so you can better serve both your interests as a business concern and the church.

To get on with our jobs, let's USE the AVRG!

*Typical of the service which AV libraries and dealers all over the country are rendering to the churches, is that of Roa's Films in Milwaukee. So modest are these people in talking about this significant appreciated service that getting articles out of them is not easy. It takes considerable doing, but, after several requests and one or two reminders, Roa sent the following article. It tells her story, and represents the story that many more similar firms could tell. — WSH*

## The Dealer Serves the Church

by Roa Kraft Birch

There are many ways in which a local AV library can serve the church, and many ways it should be used by the churches of the area. We at Roa's Films (1696 North Astor Street, Milwaukee 2, Wisconsin) feel that a well organized film rental and filmstrip catalogue is a necessity. We believe that a good catalogue which combines all producers is an important tool for the workers in the local church. We produce a unified catalogue, both for our own convenience and the convenience of our customers. They like to see all the Old Testament material,

**"FIBERBILT" CASES**  
**"THEY LAST INDEFINITELY"**

Equipped with steel corners, steel card holder and heavy web straps.

Only original Fiberbilt Cases bear this Trade Mark

Your Assurance of Finest Quality"

For 16mm Film — 400' to 2000' Reels

Sold by All Leading Dealers

or instance, in one group.

Our Protestant catalogue includes motion pictures and filmstrips from all the principal producers. These are all indexed and classified according to subject. We listed them first according to subjects and producers but found that the title and the set index was important. Now we go one step further and index completely. Our title index, ready this fall, is another aid we are giving our customers. A title index of all filmstrips that have been produced since our last printing helps the lay persons find materials they have read about and are looking for.

We send information on Lent, Christmas and vacation Bible school materials as separate mailings. This is in addition to our catalogue, and we find that our customers appreciate his service.

Our staff consists of people who are active in the work of the church. This experience helps them render service to our customers. We keep a file of all denominational programs so that these materials may be checked when special program information is desired. All our filmstrips are sent to the purchaser on a preview-to-sale basis. We think this is a MUST. We also have specialists who go out to the church and work with Sunday school teachers, or other special groups, in program planning and in presenting teaching techniques.

Every day we have people viewing films and filmstrips. Our projectors and projection rooms are busy many hours of the day. Church workers often make appointments for groups in advance, coming from as far as 200 miles. We take an active part in working with denominational groups—Sunday school teachers, adult Bible class teachers, vacation Bible school teachers, meeting them in their conventions and institutes. This is a free service which can and should be offered by a local library and is appreciated by the churches. It adds up to a good relationship in one's community.

We have run many one-day workshops. Due to a limited personnel and the high cost of travel, we spot our areas about the state, setting up one for each day, usually Monday through Friday. These are usually held in a church where a supper can be served without disturbing the set-up for our workshop. We start at 1 p.m. and close at 9:30. About 90 minutes are given over to preview sessions. These previews are broken up into departmental areas and are usually very popular. We always start our meetings with a slide or a filmstrip suitable for use in a worship service.

We also schedule previews and con-

sider them an important part of good dealer-church relations. We hold them about once a month, putting some of them on Sunday afternoon and evening. We have found that ministers favor Sunday afternoon previews. It is vital for us that ministers are well informed and are acquainted with high quality films and filmstrips that are available for use in connection with the various programs of their churches. We believe that the success of the AV program in the local church stems from the minister.

## Good and Useful

Family Filmstrips Inc. has just released a four-unit series of sound filmstrips in color under the title "Stories About Jesus for The Kindergarten, Kit No. 2—Jesus, The Friend." The stories selected are those used in the curriculum of four and five year-old children. Each has a running time of four minutes, and musical backgrounds have been especially written and arranged. Familiar songs are used together with some original music, and the frame-advance signal is four bell-like notes played on a celeste, with these notes at times becoming an integral part of the background music.

The four titles are, grouped as the narrations appear on the four sides of two LP records: *Jesus Visits Mary and Martha*, and, *Jesus Visits Zacchaeus; The Calling of Levi*, and, *Jesus And The Children*.

The content is simply and directly treated. While it is straight narrative, the directive material in the leader's guide, and repeated on the filmstrips, is sound and helpful. If followed, these little filmstrips will make traction with the minds of Kindergarteners. Each one accents the phrase from the title, "Jesus, The Friend."

I would like to add a word of warning to users, especially some of the "old school" workers with children: this is a limited-objective series. It sets out to do just one thing—tell and show some stories accenting the idea that Jesus was friendly, that He helped people to be friendly, and that His followers ought to be friendly too. That's all! They don't try to tell the whole story, or tell it to Tillich and Timmy at the same time. Few workers, "old" or "new" school, can get over more, or as much, in just four minutes.

Now let me say a critical word about the art: I found it of average quality, especially in facial detail. In keeping the pictures uncluttered, and in clearly identifying the main characters—important for children—artist John Lear has done a good job. A good and useful series, and recommended.

## Study Film Ready

*North American Neighbors*, a 27-minute sound film in either color or B&W, was cooperatively sponsored by nine member communions of the National Council of Churches, to give visual background for the interdenominational home mission study theme for this year—"Christian Concerns of North American Neighbors."

It was produced by Dynamic Films, Inc., under the supervision of the Broadcasting and Film Commission of the NCC with Alexander B. Ferguson acting as Production Supervisor and Porter Bower as Church Consultant.

If this title seems somewhat non-specific and vague, ponder the cloud-like nebulousity of general home mission theme for this year: "Christian Concerns of North American Neighbors." Like a stevedore net, a term like this will hold anything from a calf to a crate.

Quoting the BFC, this film is a "presentation of the hopes, the despair, and the way of life of our

From "North American Neighbors," an Alan Shilin production.

continental neighborhood . . . the film explores the work of missions whose service to human need is a demonstration of Christ's love for the illiterate, the ignorant, the diseased, the helpless, the homeless, the hungry." Our camera, to do this, takes us to Alaska, to Mexico, to Puerto Rico, and Haiti. The film invites North American Christians to re-examine themselves, to discover new spiritual insights and to share their faith and freedom with the total continental neighborhood like a local congregation bears its witness in love and concern to its neighbors. Protestant Christians must offer fellowship and a sense of community to all peoples, knowing no borders, no seasons, no human differences.

The Christian church must break its bonds—prejudice, unconcern, greed, neglect—and minister to its neighbors. It must share its faith, even as a congregation shares its faith with those about it. It must heal and teach, feed, relieve suffering, and share its faith—in short, it must serve its neighbors in His name.

Now how well is all this "said"? The photography is good all the way. Lester Becker's writing is uninspired. It plods; never soars. It's punctuated prose and not inspired poetry. How we miss Alan Shilin! The narration is not easy to listen to, and every now and then we miss altogether certain of Norman Rose's words. The level of the music is too high in much of the film; and, at times it takes on far too much the aspects of a series of concert pieces. It is not well integrated psychologically, and too much in the foreground. It asks for attention; a serious fault.

However, despite these faults, this is a good and useful film. Given a decent introduction it can get its message over to young people and adults. Set in the right context, it can motivate study and discussion. Even when given no

assistance at all, it can get across more information and ideas in 27 minutes than a speaker. And, while doing that it can show what it is talking about. If you prefer color, the rental will be \$12.00. If you are satisfied with B&W the rental will be \$8.00. By the time you read this it will be widely available through denominational film libraries and local film rental libraries.

## New Easter Filmstrips

*How We Got Our Easter Customs* was designed a) to build an appreciation for our traditional Easter customs; b) to show and explain the origins of a number of our familiar Easter customs, and, c) to show how Christian people the world over are tied together by their common observance of Easter. (It does not presume to deal with the deep religious significance of Easter.)

Richard R. Dolezal has done very well with the script, keeping it interesting and informative. The 35 frames of art in full color is by James Teasdale. The composition is good, the color effective and pleasing. The narration running 8½ minutes, is well-spoken by John Mallow, and backed up nicely by Venida Jones' music. The utilization guide is concise and helpful. A first class job, and highly recommended in terms of doing what it sets out to do.

*Easter Around The World* has as its objective to a) build appreciation for the Easter holiday customs and traditions of other peoples; b) to describe how Easter is celebrated by Christians in various parts of the world; and, c) to indicate the basic unity of Christian peoples as they observe both the religious and secular aspects of the Easter season.

The art, 40 frames, is by William Marsh who does a very good job of visualizing the concepts presented. John Mallow narrates in a pleasant voice. Theresa Beaumont's nicely composed prose, and for it all Venida Jones provides satisfactory background music. The utilization time is a little over 12 minutes. Highly recommended.

The age level is Junior and up. The LP record has a bell tone frame advance signal. The producer is Society for Visual Education, 1345 Diversed Parkway, Chicago 14, Ill.

Please send materials for review and correspondence concerning this column to William S. Hockman, 12 June Drive, Glens Falls, N. Y.

# Intermittent Television

**Alexander Calandra**

Associate Professor of Physics, Washington University, St. Louis

**and Neal Balanoff**

Chairman, Television-Radio Film Department, Stephens College, Columbia, Missouri

**DURING** the spring of 1958, Stephens College presented a series of science lectures as part of its closed circuit television course *Deas and Living Today*. The great latitude permitted the television effort by the administration has made it possible to do considerable experimentation in this area. This article describes the kind of thinking that led to the development of an intermittent type of presentation.

The only limitation on the format for this televised instruction is the length of each period (50 minutes). First, the standard course approach was used — that of beginning with a 25-minute lecture by the TV instructor to a class of 900 students. The lecture was viewed about 50 different groups. Each group had its own television set and a discussion leader who was a member of the Stephens faculty. At the end of the 25-minute television lecture, the discussion leader in the individual classes conducted a 25-minute discussion of the ideas presented by the TV instructor. Although the procedure had the advantage of permitting class participation, it soon developed the serious disadvantage that as the science series progressed, the increasing complexity of the material made it difficult for the discussion leaders, most of whom were regular science teachers, to do justice to the situation in the limited amount of time they had available.

With this in mind, an attempt was made to have the television

lecturer use the whole period without group discussion. This had two serious disadvantages, the first was the complete lack of student participation and the second was the difficulty of producing two 50-minute television programs weekly using student crews that were not able to give the time required for rehearsals. After reviewing the limitations of both attempts, the tele-teacher tried lecturing for about 5 minutes, leaving the students with a problem, going off the air for about 5 minutes, and returning after this interval with a discussion of the answer. During the 5 minutes the lecturer was not on camera, the discussion leaders with their small groups considered the problem posed by the lecturer.

This on-off-on pattern of intermittent lecture was generally regarded as the best approach to the problem. Students liked the technique since it gave them continuous active participation in the program; they were rewarded or punished as the case might be with an immediate appraisal of their solution to the problem as the lecture progressed. Discussion leaders were relieved of the need for extensive structuring of a discussion in a field which was not their special interest; in fact this approach would have made it possible for a student leader to be substituted for the regular faculty discussion leader. Less rehearsal time was necessary to achieve professional results, for the tele-teacher was able to run through each segment with a student crew during the "off-air" periods. Pres-

sure on the television lecturer was reduced since this system provided intervals for relaxation during the program.

Although the technique was developed as a solution to a special problem, it points the way to a possible answer to the shortage of qualified instructors in the field of science. It also provides for an imaginative use of television and film, one which would allow maximum involvement of the audience during the presentation. It is conceivable that a film series might be produced using the "master teacher" as lecturer and demonstrator during an entire standard 50-minute class period. The lecturer would present his materials and ideas, pose the problems to be worked on by the class, either individually or collectively, the projector would be stopped, turned on again at the given interval, and the filmed lecture would continue. With 10 or 20 minutes of film a 50-minute class period might well be accounted for. Instruction would be continuous, the students would be able to participate during the entire class period, necessity of close attention to a movie or television screen for an extended period of time would be obviated, and a person with less experience would be able to conduct the class. Although the last point is certainly undesirable, it is an answer to an emergency situation. As for the use of the system on television, it provides a method for creating active audience participation during the program.

# Sponsored Materials

A FEW semesters ago, newspapers all over the country carried the announcement that the Association of School Administrators had issued a bulletin on selecting and using sponsored materials for classroom use. This press release highlighted a problem which has been present in the schools of our country for some time now—that of using sponsored materials in the classroom. For the past twenty-five years trade associations, unions, government institutions, industrial businesses, and professional associations have been interested in getting information to the teachers and the students in the classroom, often looking upon the classroom as a place to sell their own products or ideas.

As more and more of this free material was made available to schools, many administrators and teachers began to question the motives behind its distribution. They became more selective, and without doubt much of this material found its way into the waste basket. Forward-looking people in industry and business began to realize that a great deal of effort, time, and money were being wasted in this campaign to enter the classroom. They realized also that the effort was causing a resentment on the part of educators and thus building a poor relationship between the schools and the organizations which issued the material.

Many educators were skeptical. Why should outside agencies be so interested in developing material for the schools, and at considerable expense, too? The obvious answer is that they have something to sell. That is of course true, but any attempt to build good will by performing some public service also involves selling. Blatant advertising may have been common in sponsored materials a decade ago but today there is a definite trend away from such advertising. There will always be a few agencies that will

try improper advertising, but it is now easy to screen out this material or direct the reader's attention to its purpose.

Some agencies, like the American Iron and Steel Institute, decided to find out whether there was a legitimate place for industry-produced materials in the classroom. After three years of study, they discovered that educators would welcome such contributions but that there were certain conditions to be observed regarding content and mode of presentation. A summary of this study was made available in a bulletin entitled "*Education and Industry Cooperate.*"

Forward-looking industrial organizations, service associations, and labor unions realize that the school cannot become a place for propaganda and that they have a responsibility to assist education on a high plane. They recognize that the school is an important factor in developing an effective citizenry for our country. As our society has become more complex, the need for an enriched school program has been evident to almost everybody, including big business. The schools influence the attitudes, understandings, skills, and appreciations of the growing generation and this is important to every segment of our culture—industrial, commercial, professional, laboring, political, etc. The future labor leader, worker, manager, owner, social leader, congressman, all get their start in schools. Hence the use of materials which give accurate information on our institutions, organizations, businesses, and industries is important; if made available by sponsors, so much the better.

However, as more and more of this sponsored material began to find its way into the schools, many educators realized that some type of screening would have to be done. Practically all schools have criteria for the selection of regular textbooks and library books—but few

have set up any standards for the evaluation of these materials which were available from industry for the asking. National teacher organizations became interested in the problem. The Association for Supervision and Curriculum Development issued a pamphlet "*Using Free Material in the Classroom*" and two years later the Association of School Administrators issued a similar bulletin. These two publications highlighted the problem of industry-sponsored material in the schools and pointed out the need for criteria for evaluating and selecting these materials.

The question of whether the schools should use materials which are sponsored by various groups in our society is no longer an issue. It has been answered in the affirmative by both teachers and administrators. It is, of course, recognized that materials must be selected with great care because the school cannot become a place in which commercial agencies can sell their wares. Nevertheless, the modern school needs all kinds of teaching material as it deals with many vital and complex problems, and some of these materials are not obtainable through the usual channels.

The job of the school is to develop an effective and participating citizen for our society—one who understands our history and our future. Young people must learn not only how to choose jobs and earn livings, but must also learn something about the problems of our culture. To help them do this, the teacher needs not only the usual textbooks, films, radio, and TV, but he must make use of everything the community can supply as a laboratory for learning. The community can supply resources, people, places to visit, and written materials of many kinds. The proper selection of these learning tools and experiences is an important part of the educational process.

by **Amo de Bernardis**  
Assistant Superintendent, Public Schools  
of Portland, Oregon

involving not only the teacher but the student as well.

An important part of a student's education is the development of skills in the selection of material. Each day he is confronted with many forms of persuasion—the press, radio, TV, and the large quantity of advertising that comes in the mail to his home. All are trying to convince him and his parents to buy something or to think in a certain way. By involving the student in the evaluation of materials, the teacher is helping him to develop his ability to evaluate effectively the various means which try to capture his mind or his dollars.

What, then, are some of the criteria which should be considered in the use of this sponsored and free material?

1. *Who authorized the material?* In far too many instances, it is difficult to identify the person, or persons, who prepared the booklet or film. If the author and sponsor is known, then a check can be made of his reputation and the source of his material.

2. *Does the material try to sell something?* The classroom cannot become a market-place. Materials which are devoted to selling a prejudiced point of view or a name-product, have no place in a classroom except where a class is using them as horrible examples. And even that is considered to be outside the teacher's jurisdiction.

3. *Does the material tie in with the sponsor's area of interest?* Often a sponsor will be interested in some area of education which is far removed from his specialty. For example, a food-products company may be concerned about the teaching of history and put out material which will try to convey some particular point of view in the teaching of history or economics which fits the social or political philosophy of the owner. Generally

speaking, this type of material has a very definite bias. Even if we, too, have a similar bias, we have no right to impose it on students. There are carefully chosen textbooks available which present current issues in ways that are unprejudiced. Let the food company develop material in the area of food and food products, and schools can use it very profitably—if the treatment of the brand name is handled with discretion. It is in areas which textbooks and text-films do not handle adequately that these companies can best supply teaching aids for the classroom, and assuredly they should limit themselves to areas in which they can be accepted as bonafide authorities.

4. *Does the material indicate that educators have been consulted in its preparation?* Education, like any business, is a technical and involved process. The educator has insights into the teaching process which can assist companies in the production of material for schools. Many sales and advertising experts do not. Sponsored materials should indicate who helped in the preparation of their content, and who decided upon the educational objectives to be met.

5. *Does the material use a rifle or a shotgun approach?* Generally speaking materials which are produced for a specific curriculum area, have a rifle approach. They try to hit a definite target. Keeping the interest and maturity level of students in mind, they aim to help the teacher surmount a particular learning problem. This is much better than the shotgun method, which tries to make materials fit too many levels. It is difficult to produce a single film on steel which will be useful to fifth grade students, a Chamber of Commerce group, a foundry class, and a high school chemistry class. A few materials can be produced which will fit a number of age or interest

groups but it is better if they are produced for a specific purpose.

The above criteria are important considerations for the teacher before using sponsored materials in the classroom. That is no small task. A great deal of effort and money could be saved if more sponsors of materials being prepared for school use would observe some of the precautions now being taken by the most well-informed, forward-looking, and service-minded sponsors of educational materials. Some of these precautions are:

1. Make a study of the school curriculum with the help of educators to determine the area where the materials could be most helpful.

2. Consult educators on the types of aids and the content which would suit the purposes of the school as well as the sponsor.

3. Send out rough drafts of the material for pre-test and evaluation before final production.

4. Make a follow-up study after the materials have been in use for a period of time to see if they are being used and how successfully.

5. Adapt the vocabulary and presentation to the maturity and interest level of prospective users.

6. Limit content to the facts desired by teachers. Avoid "grinding an axe" or promoting the sponsors' point of view. Hold advertising content to a minimum.

7. Identify authors and sources of information.

8. If teaching suggestions are to be included, get teacher help in preparing them.

9. Send the materials only to educators who request them. Avoid general distribution through the usual mailing list procedure.

The day is past when educators seriously will consider throwing out all sponsored materials. This has been made impractical because leading sponsors have taken the initiative to develop materials to meet needs expressed by teachers themselves. It would be foolish to cast out materials which will enable youngsters to achieve more effectively the objectives of the school. The challenge for teachers is to choose wisely. Joint efforts of educators and sponsors are helping to provide criteria for making these choices. At the same time these efforts are furnishing guide lines so that more and more sponsors may soon be able to replace the unacceptable with the acceptable and valuable.

# Evaluation of new films

Indiana University

CAROLYN GUSS

Associate Professor, School of Education  
Indiana University

## ART AND YOU

(Film Associates of California, 10521 Santa Monica Boulevard, Los Angeles 25, California) 10 minutes, 16mm, sound, color or black and white, 1958. \$100 or \$50. Produced by Stuart Roe. Teacher's guide available.

### Description

*Art and You* uses narration, visuals of art objects, and examples of real-life situations to contrast the ways in which art expresses individual feelings and thoughts about the world of people and nature.

A montage of statues, paintings, sketches, and other art objects introduces the world of art to the viewer and the narration explains how art begins and what it is. The beginning of art experiences is illustrated as starting with birth and growing gradually as a person's frame of reference is enlarged.

Small children are pictured being initiated into early stages of self-ex-

From the Film Associates production, "Art and You."

pression in art through the use of water colors, clay, and other materials. Familiar sights to most children are shown and these daily activities are presented with their counterparts as found in existing art. Such common subjects as a quiet village street, a lonely child, a babbling brook, a field of flowers, a gloomy day, or a festive celebration are seen as they appear in reality, and then as themes interpreted by such artists as Van Gogh, Monet, Toulouse-Lautrec, Manet, Cezanne, El Greco, Bellows, and others.

The latter section of the film attempts to explain the differences in art styles by comparing a realistic painting with the symbolic representation of the same subject. The narration

points out that there are many styles and that one artist creates what he sees whereas another paints what he feels, while yet another might even achieve a combination of the two. A portrait artist sketches a female model as she appears when interpreted by two divergent styles of art.

The camera returns to the classroom where children are working with water color and clay. Over a concluding montage of well-known art objects, the narrator reminds the viewer that "Whatever the style you choose, the art that you create tells others how you think and feel, and what you see of the many faces of the world of people and the many faces of the world of nature."

### Appraisal

The evaluating committee feels that *Art and You* will be of value to junior and senior high school art appreciation classes. The vocabulary level and the self-identification of the viewer with elementary children shown in the film make a strong bid for its use on the intermediate level, however, the majority of the committee felt that the over-all concepts of the film would be lost on an audience of that age. Adult and college groups will find much of interest in this film if they desire a simple introduction to art. Anyone interested in art will find it a challenging experience attempting to identify the many well-known yet unnamed works of art. The creative use of montage and the blending of scenes of reality with those interpreted by the artist add a quality to the film which is heightened by excellent photography.

— O. E. Bismeyer, Jr.

## 9 You can project for Audio-Visual Techniques with the Keystone

You meet every need of group instruction with the versatile Keystone Overhead Projector:

**STANDARD SLIDES.** Have you seen the latest additions to Keystone's vast library of educational slides?

**MICRO-PROJECTION;** the entire class can see a microscopic subject.

**HAND-MADE SLIDES** for presenting special subjects, and for enthusiastic group participation.

**TYPEWRITTEN SLIDES**—clean cut, beautifully

legible—for lessons, notices, etc.

**POLAROID TRANSPARENCIES** projected less than 3 minutes after you snap them.

**QUADRUPLE SLIDES**—the most convenient and by far the most economical way to project drawings in series.

**DISCIPLINE DURING PROJECTION**—every teacher knows the problems of a darkened room; you use the Keystone Overhead Projector with normal lighting, facing your group.

**Why have a projector that does less?** You are invited to have a Demonstration of the projector that does everything. Write KEYSTONE VIEW CO., Meadville, Pa. Since 1892—Producers of Superior Visual Aids.

**STRIP FILM** shown with the Keystone Overhead Projector's powerful illumination.

**2-INCH SLIDES,** and 2 1/4-inch, clear daylight projection by 750 or 1,000 watt lamp.

**TACHISTOSCOPE**—indispensable for efficient teaching of reading and spelling. Reading rates increase 50% to 75% in a few weeks. No teaching procedure has ever had such unanimous approval from research and controlled experimentation (reports on request).

## KEYSTONE Overhead Projector

## CITY OF GOLD

(McGraw-Hill Text-Films, 330 West 42nd Street, New York 36, New York) 23 minutes, 16mm, sound, b&w, 1957. \$130. Produced by the National Film Board of Canada.

### Description

*City of Gold* is about Dawson City, its present and its past, as seen from the viewpoint of narrator Pierre Ber-ton, "who was raised there." It is a quiet ghost town now where three or four hundred hard-working people live. The children playing baseball in the park think of Dawson City as a

beginning, but the weathered old men who sit along the main street talk of the "good old days." In the summer of 1898, 40,000 souls were here in this boomtown of the Klondike Gold Rush.

Still photographs made at the time of the Gold Rush furnish the visual material for the body of the film. One sees streams of heavily laden men climbing 45 degrees through the snow to reach Chilkoot Pass as Berton's father had done. On the shores of Lake Bennett at the head of the Yukon River, 20,000 men built 7,000 boats of hand-hewn logs to take them on freshly thawed waters to Dawson City. When they arrived, most of the claims had been taken by those who were there 18 months before.

Those with claims had to dig through permafrost to find a paystreak. Some who found fortunes were the subject of legends about the lavish manner of living. At an inflated price, gold would buy anything, "from oysters to opera glasses." Gold would buy women, too.

Despite the city's bawdiness, the people were very law-abiding. There were no murders nor major thefts. The saloons were closed on Sunday and the citizens were even forbidden to chop their own wood on that holy day. But there was celebrating on July 4th—a combination Dominion Day and

Independence Day when the flags of Canada and the United States flew side by side. Although the place was Northwestern Canada, the adventurers who went there were mostly Americans.

### Appraisal

This vignette of American history on foreign soil gives the viewer a realistic feeling for gold rush conditions that is easily transferable to other times and places. The still photographic images preserved on glass plates come alive with judicious camera movement and Eldon Rathburn's descriptive musical score that features among other instruments the tinnytuned piano, the banjo, and even the jewsharp. Producer-editor Tom Daly's visual transitions from live to still materials and back again are almost imperceptible, a feat that was facilitated by the unusual clarity of the old photographs. The lyrical peak of this outstanding work of filmic art was reached in the sequence of quiet, enigmatic faces of the people who watch the July 4th parade. Here the music becomes muted and reflective as the narrator wonders what they were celebrating. Why elation when so many made no attempt to seek gold? Yet they seem to have found their El Dorados—a new beginning.

They seem to feel strangely ennobled by just being there.

*City of Gold* has already been exhibited widely in the commercial theatres of this country. Now it will be welcomed by film societies for their programs. High school and college history teachers would find the film useful in portraying conditions during the gold rush era. Since the Klondike Gold Rush is directly related to the settlement of the Canadian West, students of Canadian history and historical geography will find the film even more pertinent.

When a high school teacher previews this film, he will decide whether the fashionably dressed "ladies" from "Paradise Alley" and paintings of Victorian nudes will disqualify the film for his use situation, or whether these aspects of the film are "facts of life" in a gold rush community presented subtly and inoffensively to a sophisticated audience.

—Ledford Carter

### PRINT WITH A BRAYER

(Bailey Films, Inc., 6509 De Longpre Avenue, Hollywood 28, California) 8 minutes, 16mm, sound, color, 1958. \$75.00. Teacher's guide available.

## CORONET FILMS

for classroom use

Each of the films described below represents Coronet's efforts to enlarge upon textbook presentations of those subjects which gain a new dimension on film. All are correlated to units of instruction in major texts and contain an additional number of important teaching values to help improve instruction. Each film is available in either full, natural color or black-and-white.

**Colonial Shipbuilding and Sea Trade** (1 reel) Intermediate, U. S. History. Traces the development of the 17th-century shipbuilding industry in New England.

**Helpers in Our Community** (1 reel) Primary, Social Studies. Shows how the interdependence of workers makes a more efficient community.

**The Human Body: Nervous System** (1¼ reels) Junior and Senior High, Biology. Details the functioning of the human nervous system by means of exciting cinematographic techniques.

**Making the Most of Your Face** (1 reel) Junior and Senior High, Guidance. Discusses problems of good facial grooming, including varying hair styles to fit individual face structures.

**Our Family Works Together** (1 reel) Primary, Social Studies. Clarifies the implications of work performed by family members in creating a happy home.

**Who Should Decide? (Areas of Parental Authority)** (1 reel) Junior and Senior High, Guidance. Open-end presentation of parents' and children's points of view on who should decide important teenage problems.

#### To Preview These Films for Purchase Consideration:

*Merely send us a list of films you would like to preview for purchase. We shall furnish them to you at no obligation, except for return postage.*

*We shall also be happy to send you on request a copy of our new 20th Anniversary catalog containing descriptions of 860 fine teaching films and information on how you may purchase or rent them.*

Chicago 1, Illinois

Please send me your new 1959 Anniversary Catalog

NAME \_\_\_\_\_

SCHOOL \_\_\_\_\_

ADDRESS \_\_\_\_\_

CITY \_\_\_\_\_ ZONE \_\_\_\_\_ STATE \_\_\_\_\_

how a great variety of print designs may be made with the gelatin brayer.

The opening scenes illustrate impressions being made in widely differing circumstances—a footprint, fingerprints, a tire on pavement, even a wet rubber ball being rolled on a sidewalk by a child. A few scenes present designs made with the brayer. Then, the film titles and credits themselves appear on a brayer print background.

An enumeration of the tools needed includes gelatin brayers (or rollers) of varying sizes, an oil base ink, a glass plate for getting an even distribution of ink on the brayer, paper on which to experiment, and a regular paint solvent for cleaning.

By varying the movement of the brayer and shifting the point of pressure, one can form unusual and experimental designs on paper. A demonstration is given of offset printing being employed to produce unusual designs. Corrugated cardboard and cardboard chips are placed on paper and the brayer is rolled over them, leaving a negative design. The narrator suggests that leaves, cloth, grass, and almost any small flat objects contribute to an unlimited number of new prints. Some attractive book covers, gift wrapping paper, place cards, fabric patterns, and posters are dis-

played to the viewer as suggestions for the use of the brayer print.

Other techniques are exhibited for new effects. Designs may be drawn directly on the brayer. String, yarn, or thread may be wound around the brayer for line patterns. A piece of wire is bent into a desired shape and the brayer is rolled over it revealing still other varied effects.

The film ends with the creative work of children and adults of all ages. These works are in black and white and in many colors.

#### Appraisal

This new film on art technique could be used for audiences ranging from junior high school to adult levels. The purposes of the film are to introduce new art techniques and to demonstrate the variety of designs possible for decorative and creative purposes. *Print with a Brayer* is recommended by the committee chiefly for demonstration purposes rather than for teaching the techniques discussed. The evaluation committee feels that the film might have been more helpful to the viewer if it had demonstrated the actual making of a piece of art work using the techniques presented instead of showing the possible techniques and then some finished products.

— J. Robert McAdam

## OFFICE SUPERVISORS' PROBLEMS: THE GRAPEVINE

(McGraw-Hill Text-Films, 330 West 42nd Street, New York 36, New York) Produced in cooperation with National Office Management Association. 9 minutes, 16mm, sound, color or black and white, 1958. \$125.00 or \$65.00; \$675.00 or \$350.00 per set of 6. Teacher's guide available.

#### Description

A typical situation is re-enacted to set the stage for discussion concerning the problem of office rumors—"the old Grapevine! Something simple happens—it's misunderstood—a story starts—and grows and grows."

As the film opens, Helen is telling Alice the latest bit of "unofficial information" she has heard. According to Nell, another company is buying at least a part of their plant and maybe moving operations to a distant city. Upset, Alice inquires of Mr. Stone, her supervisor, regarding the truth of this and is sharply reprimanded for listening to such rumors. He asks "who told her that."

Two weeks later Alice is waiting to have some papers signed while Mr. Stone finishes his conversation with a salesman. It seems that the firm has just purchased some file cabinets and

# PRODUCER'S DILEMMA (SECOND INSTALLMENT)

In last month's installment we left old Sy Wexler and old Bob Churchill with tears welling in their eyes at the sight of a production budget of \$8,336.93. Can they sell enough prints to make a profit? Will the preview prints slip from their trembling, nerveless fingers? On your mark. Get set:

To find out what they make on each print, add print cost and distribution cost. Subtract from sale price. Right?

To keep this heart rending calculation as simple as possible we'd better assume that all prints sold are in color (a highly unlikely state of affairs). The cost of a 1½ reel print (600 feet at .10) plus reel and can is about \$62.50. That's easy.

But the distribution cost for each print sold isn't as simply determined. It consists of such items as a study guide costing \$300, a mailing piece at \$450, a dozen preview prints totaling \$750. Those are costs that can be allocated to a certain picture.

Then there are annual costs that have to be divided among all pictures, such as costs of advertising, shipping, handling, inspecting and cleaning prints, corresponding, recording requests and bookkeeping. In short, overhead. About \$15,000 for a modest sized organization such as ours. (Do we hear strangled sounds from other producers? This is a little like having a bunch of strangers looking through your medicine cabinet.)

Then there is another big bite for sales representatives which ranges from 15 to 25% of the sales price. So:

Print, reel, can	\$ 62.50
Prev. prints, guides, etc	5.00
Overhead	22.50
Sales commission 15%	22.50
	<hr/>
	\$112.50

If the print sells for \$150, the net is \$37.50. As the picture cost \$8,336.93, 222 prints have to be sold before old Sy and Bob begin to come up for air.

Anyone in the audience still want to be a film producer? That man in the back row with trembling fingers? Step right this way, please.

*There never seems to be room for advertising.*

CHURCHILL-WEXLER  
FILM PRODUCTIONS

801 N. Seward St. L.A. 35, Calif.

they "have news for him too." Had Alice heard the end of the conversation she would have known that the installation of the new computer is an effort to make work easier for Helen and Sally, and that an experienced operator is always sent along to instruct the persons who will be using it.

This is quite a predicament arising from a very simple misunderstanding. Now Mr. Stone has a new computer and no one to run it. The film closes with his trying to explain that "management cannot always tell its employees everything it has in mind, but that surely they will be told anything that concerns them directly. In fact that's why the girls have been called in—to be told about *this* change before the equipment arrived, and posing the questions . . . "How in the devil can I keep these rumors from getting started?"

### Appraisal

Designed to invite constructive thinking on the part of the viewers, the film quickly and dramatically develops the problem, climaxing it with a pointed lead-off question requiring the audience to draw their own conclusions and discover, through discussion, a better way of handling the situation to prevent or minimize the problem. The evaluators feel it will be helpful not only in supervisory "in-service" training but in college business education classes and those of technical or other high schools having an extensive business program. The problem is a common one and an important one. Both the points of view of the supervisor and of the clerical worker are glimpsed, enabling each group to gain a better understanding of the feelings of the other. The method of portrayal is so vivid that identification of the viewer in the situation is almost automatic.

*The Grapevine* is one of a series of six short films including *The Follow Through*, dealing with good job instruction; *How Much Cooperation*, regarding cooperation between clerical staff and their supervisors; *In the Middle*, illustrating the problem of getting changes accepted; *The Bright Young Newcomer*, pointing up special motivation needs of the senior clerical employee; and *By-Passed*, dealing with the handling of the promotion disappointment case. Each film in a similar manner sets up a situation and poses a lead-off question. There is an inclusive manual for the series incorporating the information contained in the individual study guides. Among the first discussion films in this area these films are very well done and meet a substantial need.

— Jean Holt Moore

a new computer which will be delivered early the next week, complete with an expert operator. Unfortunately that is as much of the conversation as Alice hears. To her it means the dismissal of two girls, Helen and Sally, who are not even aware of the situation. Feeling that those girls deserve some sort of warning, Alice takes it upon herself to break the news to them.

Hurt and indignant, Helen and Sally seek other jobs, and on Monday morning when Mr. Stone casually announces that he "has news for them,"

# Useful Filmstrips

By IRENE F. CYPHER

Associate Professor of Education  
Dept. of Communication Arts  
New York University

Once upon a time in a review we said that a certain filmstrip was designed "to use in a discussion situation." Well, we wish we could unsay or recall that particular review, for it implies that there are times when filmstrips are not to be used for discussion purposes. If there is *anything* that should accompany the use of filmstrips, it is discussion. We stress this because so much of the material received for preview recently has been in the area of international relations and world affairs. Should this type of material be used without plenty of time allowed for discussion, then something is radically wrong with our teaching methods. If ever there was a time when thoughtful consideration and discussion were called for, it is now. Here is the material; make your own selections, thread your projectors—but then, for goodness' sake *discuss* what you and your pupils are seeing! Most of the troubles in the world can be traced to failure to discuss the important issues!

## BERLIN

(Single strip; produced by Visual Education Consultants, 2066 Helena St., Madison 4, Wisconsin; \$3.50.) Actually this is a series of some thirty-three pictures, showing the location of Berlin itself, areas affected by the war and the division of the city into zones, and some of the landmarks within city limits. What this sequence provides is a springboard from which to launch into a study of the role of this same city in the affairs of the nation of which it is the heart, and the international situations with which it is connected. It provides a series of "topical sentences" so to speak, with which to advance into research, reading and positive analysis of current newspapers, magazines and television programs and news broadcasts. Useful for social studies at many grade levels.

## CANADA: PEOPLE AT WORK

(6 strips, color; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Illinois; \$3 per

set, \$6 single strips.) At long last we seem to be giving some well deserved attention to the affairs and people of our neighbor, Canada. This series gives us an over-view which ranges from one coast to the other and includes both farm and city activities. Individual titles give a clue to subject coverage—"Fishermen of Nova Scotia," "Villages in French Canada," "Farm and City in Ontario," "Wheat Farmers of Western Canada," "Vancouver and the Western Mountains," "Logging in Canadian Forests." The material is designed to highlight items included in the average curriculum for middle grades geography in schools of the United States. It stresses both geographical factors and ways in which the people of Canada live and work. One gets a feeling of the interdependence of the land and its people. Photographs have been well chosen to show main areas of historic interest.

## SCANDINAVIA: A REGIONAL STUDY

(9 filmstrips, color; produced by Eye Gate House, Inc., 146-01 Archer St., Jamaica 35, N. Y.; \$25 per set, \$4 single strips.) Norway, Sweden, Denmark and Finland provide the scenes for this series. In each instance attention is given to the land, the people and the industries. It is well sometimes to consider the relation of these countries to each other—four very diverse groups, all too often regarded as being "one Scandinavia." There are unique differences which make it important to understand each country and to see it for what it is as an individual member of the group of nations of the world. That is the most important fact brought out by these filmstrips, and makes them useful for social studies.

## CANADIAN FILMSTRIPS

(3 strips, black and white; produced by National Film Board of Canada and available from Stanley Bowmar Co., Valhalla, N. Y.; \$3 a strip.) One of the best contributions made by the National Film Board of Canada has been the filmstrips providing us with

detailed information about the resources and people of Canada. The three latest additions of this are *Introducing the Lowlands*, *Farming in the Lowlands* and *Ships and Power*. These of course focus our attention on history, activities and life in the Great Lakes and St. Lawrence areas. All too little attention has been given to this in our own schools, and these strips provide a great deal of information that is lacking in other materials produced in our own country. Many details are given about types of farming, industrial centers, local activities and population distribution. Manuals for each strip supply additional data and make the series very useful. In fact, this series actually amplifies the information provided in most texts, and is to be recommended as resource material that will prove very useful.

### FERMENT IN SOUTHEAST ASIA

(Single strip, black and white; produced by Office of Educational Activities, N. Y. Times, 229 West 43 St., New York City; \$2.50 single strip, \$15 for series of which this is a monthly production.) Wherever you look today something happens which turns your attention to affairs in Southeast Asia. It is a large area, much too large to be covered adequately in one filmstrip. The design of this particular strip has been to concentrate attention on the areas and problems involved in the basic struggle between the forces of democracy and Asian communist imperialism. The filmstrip is long and includes many scenes in Malaya, the Philippines and Indonesia. We see many geographic areas, political events, regional activities, and the people concerned with all of these. This strip will serve best if used in sections, and made the basis for a number of lesson units. It provides information useful for both geography and social studies, and especially for study of world events.

### THIS IS CENTRAL AMERICA

(8 filmstrips as part of an audiovisual kit; A Russ and Nita Rosene production distributed by Filmstrips Distributors, Box 397, Sierra Madre, California; \$6 per filmstrip, \$55 for complete kit; for separate item prices, see price list). The filmstrips of this series are a part of an audiovisual kit which includes such materials as booklets, a sample of typical Guatemalan weaving, money and postage stamps, cacao beans, coffee berries and a special map and record. The eight strips take us on a voyage to Guatemala, El Salvador, Honduras, Nicaragua, Costa Rica and

Panama to see both the countries and the people at work. The record gives us sounds along the Inter-American highway in a very realistic way which adds a note of sincerity to the whole set. The photographs are good and scenes have been well selected to show outstanding activities and main features of a country. There is much that will interest pupils and it is good material for social studies units and also for inter-American clubs.

### HOW STRONG IS RUSSIA NOW?

(Single strip, black and white; produced by Office of Educational Activities, N. Y. Times, 229 West 43 St., New York City; \$2.50 single strip, \$15

for series of which this is a monthly production.) If any topic is certain to start discussion, it is likely to be something pertaining to Russia, Russian affairs, Russian strength. This filmstrip brings together a combination of reports, photographs and analyses of the Russian situation and activities. It points to known weaknesses in the program of the government; it indicates something of what we may expect in the way of reactions of the Russian people themselves to their own and to foreign achievements; it compares and contrasts the foreign policies of Russia and the U. S. Again, as with all the filmstrips of this series, this is a long filmstrip—one which we could hope to see used in sections for greatest

386 Fourth Avenue

New York 16, N. Y.

P.S. For a well-rounded history program, make sure your library has complete sets of THE PAGEANT OF AMERICA, 15 volumes, and THE CHRONICLES OF AMERICA, 56 volumes. Like the filmstrips, these famous Yale publications have been approved and adopted by leading Boards of Education and are widely recognized as standard for use in American history.

## PROGRESS IN SOUTHEAST ASIA

(Single strip, black and white; produced by and available from the United Nations, New York, N. Y., \$3 a single strip, \$2 per strip in quantities of 3 or more. Sometimes it is hard to visualize world affairs unless they are related in some way to people. In this instance, we are introduced to the work of the Economic Commission for Asia and the Far East (ECAFE) by way of a visit to a rice farm in Burma, the farm of one U Aung Tin. We see his family, his rich farm, and what modernization of farm life has meant to them in terms of standards of living and economic well being. This case study highlights the work of the international social and economic groups, and points to efforts that have been successful. The problems met in Burma are the same as those encountered in all underprivileged and underdeveloped areas throughout the world. This filmstrip can be made the basis on which to study these problems and the part they play in the larger programs sponsored by the twenty-six countries belonging to ECAFE. It is a good strip to use in connection with social studies units and international affairs, at many different grade levels.

# Sound Advice

about audio materials

and equipment

## OBJECTIVES DEFINED

Records designed for a specific purpose and with limited appeal have a definite place in the educational market. All too often producers overlook the clear definition of objectives and precise statement of concepts in the hope of broadening the market for the record. But in so doing educational values are frequently lost or severely damaged.

Geneva records do not fall into this trap of popularity—and therefore they serve and serve well the particular audience they seek. Geneva Records are published by the Westminster Press (Philadelphia 7, Pa.) which is the publication division of the Board of Christian Education of the Presbyterian Church in the United States of America. Specifically, the record albums are labeled for use "by or with the children . . . in the home . . . in Sunday school . . . in weekday church school."

The selections offered include Scripture (from the Old and the New Testaments), poetry, stories, songs, prayers, singing games and instrumental music. These are carefully chosen and are designed for participation as well as listening. Performance on the records is adult insofar as the voices are concerned, but is simple and direct and is easily understood by a listening child. These recordings are not intended for nor will they be adequate for any but the youngest school children—but the intended listeners will understand and enjoy them.

The titles of the four albums are "Holidays" and "My Family" which are directed at the 3-4-5 year old group, and "Through the Year" and "The World I Live In" which are directed at 6-7-8 year old children. Each album contains four 7 inch 78 rpm records. The longest single side is two and a quarter minutes, well within the listening attention of the children.

"The World I Live In" has as recording subtitles "Creation," "Beauty,"

"The Wide World and I," "Order" and "Life." These presentations are designed to be used as part of learning and play situations. The recording of "Life," for instance, includes narration about life on the earth, the song "Thanks Be To God," the poem "Who Likes The Rain?" and the song "Storm and Flood and Ocean's Roar." All of this is contained on one side with a playing time of two and a quarter minutes. The reverse side includes the song "Oats, Peas, Beans and Barley Grow," followed by narration relating the song to God's plan for the growth of living things. Then the song "Back of the Loaf" is sung, the narrator introduces a scene involving the planting season in East Africa and, finally, the Litany: "Seeds We Bring" is sung.

The producers of these recordings have carefully defined their objectives and their audience and reach that group. In selected religious institutions and schools, as well as in many homes, these recordings will be very useful.

Of general interest, but not designed for specific instructional purposes, is "And God Said," recently released by Epic Records. This (Epic Records, New York 19, N. Y., LN 3534) is a series of stories from the Bible in word and song. From the Old Testament, the stories of the Garden of Eden, Noah, Abraham and the Creation are related. The life of Jesus from birth through crucifixion is told simply and with great dignity. This recording is of limited value from an instructional standpoint but it can be an attractive and pleasant addition to a home record collection.

"And God Said" is entirely professional in concept, creation and delivery. The narration is by Dana Andrews of Broadway and Hollywood note. His presentation is clear and dignified and entirely in keeping with the theme and mood of the recording. Dickson Hall's impressive script and songs are sung by the Frank Raye Singers with equal simplicity and bring

with the beauty of the script which presents Biblical ideas in simple and entertaining form. To accomplish this, Mr. Hall chose the folk song form with simple narrative, using Biblical quotations to move the story forward.

Two new producers have recently issued recordings of interest to schools. Ardelle Manning Productions (Palo Alto, California) offers "Original Children's Activity Songs" (AMP 100) for every young school children. There are "Participation Songs" calling for children to move rhythmically to specific directions involving clapping, counting, walking and so forth; "Songs of the Seasons" which are appropriate to the school year dealing as they do with Halloween, Christmas, Valentine's Day and Washington's Birthday; and, "Music for Resting" intended for that period of the day when the children relax after playing or other activity.

Among the "Participation Songs" are: "Good Morning Song," "Put Your Hands on Your Head," "We Clap to the Music," "Walking Around in a Circle," "How Many Fingers?" "Right Hand, Left Hand," "Walking," "Dress Yourself," "What Is Your Name?" and "We Skip Around the Corner." These songs are all short, written with the listening span of the child in mind. The language and directions are simple and easy to follow. Children will particularly enjoy having the teacher participate with them and using the monograph as an "assistant teacher" or these pleasurable learning experiences. This "first production" is an exceptional presentation which will find wide use and application in elementary schools in the kindergartens as well as in nursery schools.

The recordings may be used, too, for diversion for younger children in Sun-

day school programs and in camps. So, too, may "Read Me A Story" (Weston Woods Studios - Weston, Connecticut, PBP 101) which has recently been released. These are the Picture Book Parade stories read by Owen Jordan to a musical accompaniment. The stories read include "Millions of Cats," "Mike Mulligan and His Steam Shovel," "Make Way for Ducklings" and "Hercules." The latter recording has application, too, in libraries for story hour programs and for loan purposes to the youngest borrowers.

The recording of four stories is intended for use in the language arts program of the kindergarten and first grade. Alone, and without either text or pictorial illustration, the recording will have little school value. However, the recording can be reproduced while children follow in the books of the same title, or while appropriate illustrations are projected. In school, this can be a useful "rest" activity, or it can be used to hasten the development of listening skills as well as to motivate artistic, oral and dramatic expression.

Columbia Records (New York 19, N. Y.) offers four new titles in the foreign language field which may have some interest for secondary school students. These are "Learn French in Record Time" (D2L 246), "Learn Italian in Record Time" (D2L 247), "Learn Spanish in Record Time" (D2L 248) and "Learn German in Record Time" (D2L 249).

These recordings all serve a particular purpose, but it is not essentially a school purpose. The recordings will have greater value in library collections, for they are all tourist oriented and are intended to help the traveler get along in a country he may be visiting. Typical of the areas covered

## Learn Geometry and Chemistry Definitions By Record

Simplify your teaching of basic plane geometry and chemistry terms, definitions, rules, etc., by using recordings prepared by qualified teachers in these fields. An extremely effective method that saves you a great deal of preparation and lecturing time.

### CHEMISTRY RECORDING

PART I Contains the name, spelling, atomic weight, atomic number and valence of forty-two chemical elements.

PART II Contains the name, spelling and correct pronunciation of eighty-six important terms used in chemistry.

PART III Contains the name and identification of ninety-eight technical terms used in atomic science.

12" 33 R.P.M. (over 40 minutes) Order No. C 123 ..... \$3.65

### PLANE GEOMETRY RECORDING

PART I Contains 9 basic axioms and 14 postulates.

PART II Contains 61 theorems with a statement suggesting how one may PROVE the theorem.

PART III Contains 66 theorems arranged in groups according to the geometric figure with which they are concerned. This is useful in SOLVING geometry problems. Also there are 30 key definitions given throughout Part III relating to the theorems.

12" 33 R.P.M. (over 40 minutes) Order No. G 121 ..... \$3.65

SPECIAL OFFER—10% discount on any combination of 25 or more records. We pay postage inside continental U. S. A.

### AUDIO EDUCATIONAL AID

Dept. 54 Box 250 Butler, Missouri

are: "Aboard Ship," "Going Through Customs," "Getting Around Town," "At the Hotel," "Renting a Room," "Dining Out," "Going to Church," "Music Halls and Theaters," and "Exchanging Money." The information contained in these sections can be valuable to the visitor in a foreign country. An individual with a background in the language can profit from the review of listening prior to travel, but the recordings will not be a great help in developing language facility.

The recordings are accompanied by appropriate texts containing interlingual dictionaries as well as outlines of grammar for each language. The recordings and the texts are prepared by the Institute for Language Study. They will add to the pleasures of travel for the visitor who prefers to use a foreign language rather than English in travel.

New, and worthy of secondary school, college and library attention is the "Anthology of American Poetry" released by Lexington (Pleasantville, N. Y.). This "Anthology of American Poetry" (Lexington, LE 7550/7555) effectively covers the years from Ann Bradstreet (1612-1672) to the late nineteenth century, and includes representative works from such American greats as Whittier, Poe, Holmes, Thoreau, Lowell, Dickinson, Whitman, Emerson and Bryant. Among the poems read by David Allen, Nancy Marchand and David Hooks are "Ichabod," "Annabel Lee," "The Chambered Nautilus," "Inspiration," "Lincoln," "Because I Could Not Stop for Death," "I Hear America Singing," "Forbearance," and "To the Fringed Gentian."

This anthology is a very careful selection, and the readings are uniformly good. The poems represent the moods of the times in which they were written—tenderness and loftiness, irony and sentiment, humor and gravity. This anthology dispels the thinly woven, almost transparent myth that American poets were intellectual and artistic pygmies, hardly worth even of carrying quills for their British contemporaries. The poems involved are studied throughout the country and these artistic recorded presentations can add to the pleasures of the study.

It is interesting to find that libraries and schools both are accelerating the trend to audio documentation in instruction as well as in shelf collections of current events and history. This was begun some twenty years ago, when World Book Company pub-

lished "Then Came War." This album of 78 rpm shellac recording is no longer available, and has become a collector's item. It set a standard which has been followed by leading record companies, including the "I Can Hear It Now" series of Edward R. Murrow (Columbia), the "Mr. President" (RCA Victor) and many others.

Now the original sound recordings of presidential inaugural addresses delivered by Roosevelt in 1941 and Truman in 1949 are available from The Spoken Word (New York 16, N. Y.) under the title "Footnotes of History" (SW-112). This recording is precisely that—insofar as the addresses themselves are footnotes—for these are documentation of the highest order. Through these recordings—and others similar to them—teachers can effectively recreate the atmosphere of another generation, the atmosphere of impending war as well as that of the struggle for peace. Thus—the recordings—can be presented effectively in class in the progressive development of listening skills, and they can be used for assigned listening through school library loan collection, public libraries and other collecting agencies documenting history as well as make it through newspaper files. We want to add this newer form of information preservation and presentation to their established practices.

Applicable to the immediate instructional situation is the work of Ernest LaPrade. His talents now have been employed by CABOT in the development of two albums for use in the elementary grades.

"The Instruments of the Orchestra" is precisely what the name implies—an introduction musically to the several families of the symphony orchestra and to the instruments which constitute each section. Solo performances by established and recognized artists demonstrate the range and adaptability of each instrument. Included in the album is a simple "quiz game" which may be used for oral summation and examination by the imaginative teacher.

A companion album is "The Masters of Music," which is a veritable concert in miniature for young people. The works of Mendelssohn, Berlioz, Tchaikovsky, Borodin, Grieg, Rossini, Haydn, Beethoven, Wagner and the younger Johann Strauss are heard performed by leading orchestras. This album, too, includes a simple quiz. The commentaries in each album are the work of Mr. LaPrade and are read by Milton Cross.

HERE'S A NEW AND BETTER WAY TO TEACH

With The New **VU-GRAPH**

Overhead Projector.

It's unique! Beseler's new VU-GRAPH is the projector you use in a fully lighted room. The picture flashes OVER your head—onto the screen—while YOU face the class to see who understands, who needs help. Use prepared transparencies or quickly make your own. VU-GRAPH projects in black and white or full color: slides, stencils, models, even your own writing—as you write! 4 models including new portable. Teacher operated—no assistant needed. Free Demonstration at your convenience. Free Brochure: "Get Your Point Across—Fast!"

Two new primary films!

**Grandmother Makes Bread**

Robin and Billy visit their grandmother and help her make bread. The children learn good manners and health habits, and develop some beginning concepts of measurement, telling time, and temperature.

**The Miller Grinds Wheat**

Grandmother takes Robin and Billy to visit a small, modern flour mill. They see how the grain is stored, ground, sifted and socked, and how the flour is shipped to markets and bakeries.

PRODUCED BY LAWBITTS. EACH 11 MINUTES. COLOR \$110, RENT \$5; B & W \$60, RENT \$3.

# IN THE TRADE

Robert E. Lewis

## Argus Prexy Moves Up

After the merger of Argus Camera with Sylvania Electric Products, Inc., its president, Robert E. Lewis, was named senior v-p of Sylvania. Last month he was elected president, his predecessor, Don G. Mitchell becoming Chairman of the Board. When Sylvania merges with General Telephone Corporation, Mr. Lewis is slated to become president of the combined "General Telephone and Electronics Corporation." Argus sales have grown from \$5 million in 1950 to \$21 million last year.

## \$35 Million—1959 Tape Market

A \$35 million market for magnetic tape in 1959 was the New Year's prediction of J. Herbert Orr, President of OR-Radio Industries, Inc., manufacturers of IRISH brand tape. Tape sales in 1958, according to Mr. Orr, were \$21 million. He predicted that within five years tape sales will run around \$115 million a year. By the end of 1959 approximately 725,000 new recorders are expected to be added to the present 3½ million estimated by the Magnetic Tape Recording Association. Tape sales in 1959 are expected to total 17 billion feet.

## Harwald "Cracker Barrel"

The Harwald Company, 1245 Chicago Avenue, Evanston, Illinois, announces that its annual Open House and Audio-Visual Workshop will be held in the company's plant from February 26 through 28, 1959.

This year's session will feature speeches by various authorities, representing the different aspects of the audio-visual field. In addition, certain periods will be devoted to informal discussions and presentations of case histories and new developments. Since the field is growing rapidly, the Open House and Workshop will be a valuable opportunity for

people from all segments to meet and exchange ideas.

The Harwald Company has been manufacturing audio-visual and professional film handling equipment since 1946. Among its products are the MM Supreme, 16mm sound projector; continuous slide and motion picture projectors; Inspect-O-Film automatic film inspection machine; automatic hot splicer; film cleaner; film cement. In addition, the company has recently expanded its facilities to handle a complete line of film accessories, such as screens, racks, cabinets, recording tape, rewinds, etc.

## New Prints For Old

Knowledge Builders has revised its film "Our National Government" to reflect changes in government since the picture was originally produced. An allowance of \$7.50 applies against the \$50 purchase price when an old print of the subject is turned in on the purchase of the revision.

## Trade Relations Committee

The Sustaining Members of the National Audio-Visual Association (NAVA) have formed their own Trade Relations Committee. V. C. Doering (Jam Handy) is chairman; Hy Schwartz (Victor Animatograph) is reporter for Public Relations; Prentice Ford (American School Publishing Co.) Advertising and Publicity; Ben O'Dell (Cathedral Films) Finance; Marty Meyers (Charles Beseler Co.) Recruiting and Training A-V Salesmen; and Stan Taylor (Educational Developmental Laboratories) Interviewing and Testing Salesmen.

In addition the following are members of the committee: Jack P. Britten (American Optical), George Oakley (Bell & Howell), Vic Crowcock (Concordia Films), Jack Coffey (J. C. Coffey Co.), Fred Powney (McGraw Hill), H. Y. Feldman (Radiant Screen), George Bassett (Reeves Soundcraft), Al Devereaux (Eyegate House). A meeting of sustaining members was held in connection with the NAVA Southern Regional Meeting, at New Orleans.

AV IN EVERY CLASSROOM—page 126

*AV Makes Math Come Alive - page 130*

where you need it! when you need it!

There's no need for a special room assignment, no delay, when the classroom has LEVOLOR A.V. (Audio-Visual) VENETIAN BLINDS. These blinds give complete control of ambient light to suit the subject, projector and student activity.

Today, any classroom can be converted for Audio-Visual instruction inexpensively by the installation of LEVOLOR A.V. BLINDS.

Write for Levolor's invaluable survey report "How Dark Should Classrooms Be For Audio-Visual Instruction?" No charge or obligation. Write to Audio-Visual Dept., Levolor Lorentzen, Inc., 720 Monroe St., Hoboken, N. J.

**Coronet Films announces  
completion of more  
than 200 films in**

**to help teachers at all grade levels clarify  
difficult to teach science concepts**

Twenty new 16mm sound motion pictures extend Coronet's balanced program of more than 200 films on science and mathematics for all grade levels. Emphasis has been placed on certain aspects of this quality program: Films for Elementary Science and Films for High School Chemistry, Physics, and Biology. The common purpose of the films in all areas is to help the classroom teacher do an even better job in clarifying difficult-to-teach science concepts. Coronet films are constructive teaching aids, not substitutes for good teachers.

The citizen of tomorrow as well as the scientist must be well-grounded in scientific principles from an early age. This makes Coronet films so important for the Elementary Science program. Accurate, interesting teaching materials stimulate creative scientific thinking and new awareness of basic concepts. They help develop the scientific attitude—even among

**New funds for purchase available**

Most of the 200 Coronet films to help teach science and mathematics may be purchased in part with funds now becoming available under provisions of the 1958 National Defense Education Act. This is an excellent opportunity to begin building a science film program for all grades. A list of the Coronet films which may be purchased under terms of the Act will be furnished on request. Please use the coupon or write to Coronet Films.

the youngest pupils. Some of the twenty new science films for use in grades 1-6 are: *Trees: How We Identify Them*, *Electricity All About Us (Exploring Science)*, *Story of Our Number System*, *Living and Non-Living Things*, and *Understanding Our Earth: Rocks and Minerals*.

Another area of concentration at Coronet Films has been the production of motion pictures for high school Chemistry, Physics, and Biology—to help teach complex aspects of units within these courses. Their use permits competent teachers to adapt their presentations to preserve the vital relationship between teacher and student. Films in these areas are not designed as complete courses; rather, they supplement present efforts to teach more effectively. Among the new films for Chemistry, Physics, and Biology are *The Laws of Gases*, *Life in a Cubic Foot of Air*, *Reproduction in Plants*, *The Human Body: Nervous System*, and *Laws of Conservation of Energy and Matter*.

# OVER THE YEARS

Flexalum Audio-Visual blinds will be your most economical, most practical classroom window covering!

FLEXALUM A-V BLINDS GIVE YOU EVERYTHING FROM FULL DAYLIGHT (WITHOUT GLARE) TO "PROJECTION" DARKNESS—yet they *cost less to install* than any combination of black-out and conventional window covering. What's more, they *cost less to maintain*, too. Flexalum's special spring-tempered aluminum, wipe clean plastic tape and nylon cord give years of trouble-free service. (That's certainly a comfort in these days of ever-increasing maintenance costs.) And, the greater number of slats per blind, special tape construction and light trap channels enable you to turn any classroom into a dark auditorium at the flick of a cord. Less light comes in... less money goes out—with Flexalum A-V blinds... sold with a written five year guarantee by Hunter Douglas Aluminum Division of Bridgeport Brass Co.

(Installation shown: Carle Place High School, Long Island, N. Y.)

# On the Screen

## Cover Scene

This month our cover features a picture from the Pat Dowling Picture "The Pioneer Burro," to be released this Spring. Designed primarily for elementary school audiences, the film relates the role of the gold prospector in the early development of the West, and that of his indispensable helper and companion, the burro. The color film is one and a quarter reels in length.

## And Still More "Architectural Solutions"

Paul C. Reed has contributed the third of the series "Architectural Solutions for Audiovisual Problems" with his fine account of the planning and design of Rochester's New York East High School. A highly enthusiastic response from our "audience" indicates that this series is proving helpful and interesting reading, and the editors would like to encourage the submission of manuscripts containing new and different architectural solutions.

## Authors on Parade

For some time we have believed that our readers would like to know more about the audiovisual leaders who contribute to *Educational Screen & Audiovisual Guide*. This month a new column appears for the first time. "With the Authors," on page 120, en-

deavors to provide a brief professional biography of the contributors, with the idea that some knowledge of an author's training, research and practical experience may shed light on and add value to his writing.

## Report from ACAVEI

A recent bulletin from the American Council for Audio-Visual Education in Israel adds some interesting sidelights to Dr. Florence Freedman's fine article on page 124. The Council was initiated ten years ago by Mrs. Esther L. Berg, and has continued to further the use of AV education in Israel through various trips, projects, and the donation of equipment. It is affiliated with the Audio-Visual Department of the Pedagogic Center in Jerusalem, the Amal School in Haifa (devoted to educational rehabilitation), the Audio-Visual Center of the Beth Hakaren Demonstration School at the Hebrew University in Jerusalem, the Helen Keller Home for the deaf and mute, the Audio-Visual Mobile Unit presented by HIAS through the efforts of Mrs. Berg and Dr. Freedman, the National Safety Council in Tel-Aviv. Several organizations and private donors have given generously to the equipment of the Israeli Audio-Visual Department. Among them are Adolph Wertheimer (screens), Ben Peirez (Viewlexes), Herb Myers (Beseler projectors), Morton Schendel (filmstrips), Filmstrips of the Month Club (science filmstrips), Eastman Kodak (films of safety) and Bell & Howell (film projector).

## TECNIFAX "VISUCOM"\* PROGRAM

The Tecifax "Visucom" Program offers to educational executives and teachers; and to industrial, military and governmental training personnel, an opportunity to gain experience in the utilization of the Diazotype Processes, Photography, and Photo-Copying, as visual communication tools.

Workshop courses for qualified applicants are offered on three or five-day bases, or longer, if required, and are conducted continuously throughout the year at the Tecifax plant in Holyoke, Massachusetts. *There is no charge for the facilities, materials, and instruction which comprise the program.*

The Visucom Program is designed to develop, or to increase skills, in the creation, production and presentation of Visual Communication. Emphasis is placed on the preparation of transparencies for overhead projection; but attention is also given to other techniques for preparing visual devices. The psychology of communication comes in for extensive discussion. The program provides facilities for working out the details of

\*VISUAL COMMUNICATION

your specific visualization projects. A certificate of completion of this program will be issued to those who qualify.

If you wish to learn more about the Tecifax Visucom Program, please write to Section VP, Visucom Laboratories, Tecifax Corporation, Holyoke, Massachusetts. Please indicate in the letter the nature of your interest in Visual Communication activities.

# Have You Heard?

News About People, Organizations, Events

Charles E. Luminati, Francis E. Almstead, Stephen M. Corey, MacDonald Egdorf, Don White, Samuel Cohen

## Long Island AV Council Holds Successful Meeting

The first Annual Audio-Visual Advancement Conference of the Long Island Audio-Visual Council had a highly successful meeting late last fall. Dr. Samuel Cohen, President of the Council, was chairman of the conference, which included around 150 superintendents, supervising principals, school board members, PTA representatives, AV directors and coordinators, and manufacturers' representatives. Among the speakers were: Dr. Stephen M. Corey, Dean, Teachers College, Columbia University; Dr. Francis E. Almstead, Special Consultant to the New York State Commissioner of Education on Educational Television; and Mr. Charles E. Luminati, Director of Audio Visual Services, Great Neck Public Schools.

## Colorado Inaugurates AV Internship Program

The University of Colorado College of Education and the Bureau of Audio-

Visual Instruction recently announced an Internship Program for graduate students in Audio-Visual Methods and Techniques. Any Doctorial candidate who has been accepted for an advanced degree by the Graduate School is eligible for consideration. Internships are granted jointly by the Dean of the College of Education and the Dean of the Extension Division.

This training embraces three integral phases: course work, work experience, and guided college teaching. It also provides financial assistance. The amount of course work required will depend upon the academic background experience and ability of each intern.

Work experience will be provided by the Bureau of Audio-Visual Instruction and will include practical on-the-job training in the problems of Audio-Visual Administration. Interns who satisfactorily complete this program in conjunction with their other academic work may receive either an Ed. D. or a Ph. D. degree with a Minor in Audio-Visual Education.

For further information contact Dr.

Robert E. de Kieffer, Associate Professor, College of Education, University of Colorado, Boulder, Colorado.

## ETRC Moves Headquarters to New York City

The Educational Television and Radio Center will move its headquarters, including the offices of the president, the program department, development, and public relations, to the Coliseum Building, 10 Columbus Circle at 58th Street, New York City.

The departments of business and legal affairs, distribution and research will remain in Ann Arbor, and film distribution, now handled by the University of Illinois, will be transferred there.

## At New Orleans Meeting —NAVA Discusses NDEA

reported by Wm. F. Kruse

The administration status of the National Defense Education Act just prior to announcement of approval of some or all of the 27 state agency plans thus far submitted, was the main theme of the National Audio-Visual Association southern regional meeting held at New Orleans January 22-24.

A panel of three outstanding educators, directly involved in the administration of the Act, explained its provisions to an audience of some 200 NAVA dealer and industry members and answered scores of questions about its procedures. Lloyd King, in charge of the administration at the U. S. Office of Education of Sections III and V (a) made the principal presentation. He was flanked by Dr. Shelby M. Jackson, Louisiana State Superintendent of Schools, and by Dr. Austin Meadows, Associate State Superintendent of Schools in Alabama and one of a 12-man national committee to pass on projects submitted by higher institutions of learning for experimentation and research.

The resistance of state agencies to any hint of federal control was clearly reflected in the opening remarks of

**Subject:**

## **NEW BESELER-KALVAR SLIDE-O-FILM FOR EDUCATION AND RESEARCH**

### **I What it is:**

*A. A physical system of photography... a film exposed by light — developed by heat  
... requires no chemicals or darkroom... produces final results in 2 to 5 minutes.*

### **II What it does... and how it's used:**

*A. Makes positive projection slides from black and white or Kodacolor  
negatives for immediate use.*

*1. Rapid in-school production of low cost slides for A-V programs*

*2. Slides for immediate circulation of charts, lab set-ups, microscope slides, etc.*

*3. Slides made by student for creative projects and classroom presentations.*

*B. Makes black and white negatives quickly from color slides, Polaroid™  
transparencies and 8 or 16mm movie frames for excellent  
black and white prints or enlargements.*

*1. Low cost mass distribution of black and white  
prints or enlargements.*

## **NEW "WONDER FILM" for education and research ... makes projection positives from negatives... negatives from color slides, in minutes... without darkroom or chemicals**

Beseler Slide-O-Film . . . exposed by light and developed by heat, is a revolutionary new photographic tool for high-speed production of positive transparencies from negatives and negatives from color transparencies without the use of chemicals or darkroom . . . at 1/2 your present costs. New Slide-O-Film is simple to use . . . a physical system of photography—recently made available for civilian use after 10 years of development and use by government agencies—does away with darkroom and chemical procedures. Simply place the original transparency or negative (emulsion to emulsion) against a piece of Slide-O-Film . . . expose in an ordinary projector . . . subject the exposed film

to a heat source, and final development is complete. Educational and Audio-Visual applications . . . new uses for Slide-O-Film . . . are developed daily by educational photographers and college and public school audio-visual directors. The Slide-O-Film Research and Education Department, established by the Charles Beseler Company, is ready to inform you of all developments applicable to operations of your school or organization . . . to consult with you and examine specific applications of Slide-O-Film to your problems and projects.

*For complete information address your inquiries to:*

**CHARLES BESELER COMPANY**

232 South 18th Street, East Orange, N. J.

Superintendent Jackson. He spoke highly of the audiovisual work in his own state, especially that of the seven regional film libraries each associated with a teacher training institution and serving the schools in its area. "States like ours want to use federal money to strengthen what we already have."

Mr. King made it clear that there was no notion anywhere of federal control over the agencies that vary widely from state to state. Each state agency was responsible for the formulation of its own plan; this, when certified by the state's attorney general as coming from the properly qualified state educational authority, was examined in Washington only to the extent of determining that it conformed to the purposes set forth by Congress. Some 27 such plans are already in Washington and the first batch of approvals was expected momentarily. Each state would report its own science, etc., status, propose its own extensions, set its own priorities, establish its own standards, decide its own matching fund ratios, and administer its own share of the federal funds allocated to it, in bulk, on the basis of its original plan. In the course of extensive questioning, it was brought out that, aside from special nonmatching funds for state agency organization and

supervision, all aid under Article III would have to go direct to elementary and secondary schools on the local level. Thus state-owned film libraries would not at present benefit, but locally owned resources, including those cooperatively operated by schools in a county or other area. Nor would an elementary school operated by a teacher training institution be eligible for Act funds as the law now stands. Other questions brought the answer that local schools' purchasing routines would follow those prescribed in existing state statutes and regulations. In general, a principal would request financial aid for the purchase of equipment or materials for specified uses covered by the Act, this would clear through the city and/or county superintendent and be paid by the disbursing officer named in the state's plan.

Standards to be met by equipment sought under the Act would be set by the state, but some uniformity was likely in view of the action of a recent meeting of Chief State School Officials, at East Lansing, in seeking help from the U. S. Bureau of Standards.

Dr. Austin Meadows stressed the importance of Title VII (Research and Experimentation) to the future both of education in general and, specifically, to the audiovisual field and indus-

try. The committee on which he serves has already received some 50 proposed "projects." To be accepted these must be, he said, sponsored by a responsible organization, headed by a competent qualified investigator, and be completed within 18 months. The dissemination of valid research findings, and their impact in teacher training and in in-service utilization, will accelerate immeasurably the growth of the audiovisual field.

Don White, NAVA v-p, urged the dealers to encourage the weaving of audiovisuals into the science, math and language budgets in terms of their essential contribution to the improvement of teaching in those areas.

## People in the News

Don Smith is on his new job as Director of Audio-Visual Education at the Kansas City Public Schools. He spent the past year in graduate study at Wayne University and was formerly in charge of AV services at the University of Illinois.

Charles Schuller, DAVI president, will give an overview of developments under the National Defense Education Act at the spring meeting of the Illinois Audio-Visual Association, April 2, at Springfield, Illinois. The meeting, at the Leland Hotel, will start at 11 a.m. and continue until noon the following day, when there will be a business meeting and discussion of the Illinois State Plan for implementing the Act.

Henry C. Ruark, Jr., NAVA Director of Information for the past two years, has left to become a supervisor with the Oregon Department of Education. He will work with that state's program to improve instruction under Title III of the National Defense Education Act and with instructional materials programming and development.

Fred F. Harclerod, Dean of Instruction at San Jose College in California, will be the first president of the newly established Alameda County State College to be developed in the vicinity of Hayward, California.

At San Diego, Dr. Harclerod established the first audiovisual pilot program in the California State College Program. He has conducted many workshops, served on numerous DAVI committees, and addressed the 1958 convention as program evaluator. He has co-authored a new textbook, an audiovisual manual, a series of films

- 1. Versatile work and display area** is 27" x 36" aluminum panel. Also available with chalk board panel. Adjusts easily to any position up to 72" high with exclusive automatic stop, for use standing or sitting. Equipped with chart gripper, spring clamp, detachable trays.
- 2. Sturdy aluminum construction** is both handsome and long-lasting. Sets up in seconds, stands firmly on rubber feet. Exclusive floor gripper holds steady, even under pressure of writing.
- 3. Easy to carry anywhere.** Easel folds into compact carrying size 29" x 45" x 3". Weighs less than 12 lbs.
- 4. Two models available.** Jr. Easel in handsome aluminum has 20" x 27" hord bound backing. Extends to 50" high with board removed for use on desk top, table or floor. Closes to compact 21" x 38½" x 3", weighs less than 7 lbs.

Jr. Easel for use on table or floor has built-in chart-gripper and tray.

Back view of floor model shows sturdy construction, ease of adjustment.

ORIGINATOR OF THE TAPE METHOD OF DRAFTING

123 River Road, Leeds, Mass.

or McGraw-Hill, and the *A-V Instruction Materials Manual*. He has edited publications such as *Audio-Visual Administration*, and for five years served as chairman of the Committee on Television in Teacher Education of the California Council on Teacher Education.

Robert B. Hudson, formerly chief of programming at the Educational Television and Radio Center, has been promoted to the position of vice president of programming of the national organization. He has supervised the development of a nationwide program service for noncommercial educational television stations. This service has distributed nearly 4,000 programs since its beginning in May, 1954.

Forrest E. Comer, superintendent of schools in St. Paul, Minnesota, is now president of the American Association of School Administrators.

### J. S. Films Successful in Venice and Padua

CINE, the Committee on International Non-Theatrical Events, reports that three American films won awards and special recognition at the 1958 film festivals in Venice and Padua. "A Dancer's World," produced by Pittsburgh educational station WQED, won a special diploma in the short films for television division at the Venice Film Festival and the two others won a Silver Medal and a Special Mention at the Third International Exhibition of the Scientific-Didactic Film, University of Padua. They were "Ovulation and Egg Transport in the Rat," produced by the University of Washington; and "The Strange Case of the Cosmic Rays," produced by Frank Capra and sponsored by the Bell Telephone System.

In October, 1957, CINE was organized by representatives of business and education, called together by the Department of Audio-Visual Instruction of the NEA. It takes care of the screening of non-theatrical, non-governmental films to be shown at international festivals.

### School of Communications to be Established

The University of Pennsylvania, with the aid of a gift from the Annenberg Fund, will establish a School of Communications. This will be the first separate school dedicated to the theories and techniques of the mass media.

# "Take me to your teacher"

Other Viewlex projectors available from \$50.25 to \$495.00. Ask your Viewlex Audio-Visual franchised dealer for a demonstration, or write for catalog.

## The VIEWLEX V-500

The projector with features of the future—Viewlex V-500 Combination 35mm Filmstrip and 2" x 2" Slide Projector makes your teaching easier. Automatic film threading means — you just slide the film into the projector channel and it threads itself. Then film winds neatly onto take-up reel — automatically. Projects single or double frame, horizontally or vertically. The 500 watt lamp in the exclusive light multiplier optical system gives evenly distributed light to every section of the screen — more light than other projectors of even higher wattage . . . and your pictures always stay in focus. An exclusive reverse jet-action suction fan draws cool air in and around the film first — circulates it quickly throughout the projector — dissipating lamp heat out of side vents. Sealed top eliminates any distracting light leakage. An added aid is the built-in magnifier pointer that actually enlarges any portion of projected filmstrip image to fix attention on details under discussion. Comes complete with 5" f/3.5 Luxtar lens and slip-on aircraft carrying case.

3", 7", 9" and 11" lenses available. For even greater brilliance the V-500 is also available with a 5" f/2.8 Luxtar lens.

**viewlex INC.**

All Viewlex projectors are **GUARANTEED FOR A LIFETIME.**

35-10 QUEENS BOULEVARD, LONG ISLAND CITY 1, N. Y.

FLORENCE B. FREEDMAN, recently returned from Israel and some wonderful experiences which she shares in this issue with our readers, is a member of the Department of Education in New York City's Hunter College, where she is in charge of the comprehensive exams for the Master's Degree. The author of *Walt Whitman Looks at the Schools* (King's Crown Press) and co-author of *Audio-Visual Aids in Jewish Education*, Dr. Freedman has also contributed to many journals. She is ed-

itor of the Educational Department Newsletter.

EDWIN E. HENRICHSEN is employed by the Salt Lake City Board of Education and supervises the Graphics Laboratory at the University of Utah, where he teaches and produces audio-visual materials. A teacher of art and science, he is also a member of many educational and audiovisual organizations.

KENNETH P. KIDD is Professor of Mathematics Education at the University of Florida, Gainesville. He is in charge of internship and method courses for mathematics teachers; some of his ideas on the use of AV material in teaching mathematics are passed along to *Screen* readers in this issue. A kit of instructional materials designed by Dr. Kidd has been in use all over Florida for the past few years, and he has recently designed a kit for elementary school teachers which is being used in a television program he is producing.

WILLIAM C. MILLER, authority on bulletin boards and the woes they cause teachers, is an educational Consultant with the Wayne County Board of Education, specializing in instructional materials. Formerly he was instructor in audiovisual education, and then Assistant Director of the Audio-Visual Materials Consultation Bureau of the College of Education, Wayne State University, Detroit. He has served in official capacity in many local and statewide organizations and has also been a member of the editorial board of *Audio-Visual Instruction*. Dr. Miller has personally produced various types of instructional materials, and has published widely in other journals in the educational field.

JOHN MOLDSTAD, author of the article on Indiana's plans for better classroom AV facilities, is Assistant Professor of Education and Head of the Utilization Department of Indiana University's Audio-Visual Center. He was formerly a mathematics teacher and audiovisual director in southern Minnesota. At present he is working with students and school systems throughout the state to improve utilization and develop better facilities for audiovisual education. Dr. Moldstad is also assistant chairman of the Research Committee of DAVI and editorial consultant for *Audio-Visual Communication Review*.

PAUL C. REED, well-known as the editor of *Educational Screen and Audio-Visual Guide*, is also Director of Instructional Materials for the Rochester, N. Y. public schools. On page 126 appears his first installment on the AV facilities at Rochester's new East High School.

Successful A-V planning demands equipment that will take years of hard, consistent use! That's why you'll want to select a Vidiomaster Screen by Da-Lite. 50 years of important engineering improvements are your assurance of quality construction features in every Da-Lite screen. Choose from mat white or "White Magic" glass beaded ... or the entirely new Wonderlite® Lenticular surface which gives superior performance even in undarkened rooms.

WRITE for name of Franchised Da-Lite A-V dealer in your area who will gladly demonstrate the full line of Vidiomaster Screens!

*"The standard by which all others are judged"*

LANGUAGES BECOME ALIVE **IMMEDIATELY!**

WITH **Ekotape**<sup>®</sup>  
RECORDERS

Automation in foreign language study! New tape teaching method stimulates enthusiasm and response in students, makes teachers' efforts more rewarding. In modern language training centers, students take individual lessons from master tapes, record their own "lessons." Personal attention isn't lost — teachers are in voice contact with *all* students.

Ekotape recorders are specified for many new language training centers for these important reasons . . . exceptional dependability with no "down time," simple controls for easier operation, instant stop-start action, and unexcelled fidelity. In addition, Ekotape recorders and amplifiers are priced well within the reach of most school budgets.

Accelerating your language training program? Your Ekotape dealer can help you develop your own tape teaching center. Call him today or write direct.

# Anybody and Everybody

It seems that everybody who *is* anybody in the audiovisual field has at some time or other shared his experience and ideas with others through the pages of this magazine. In fact, it seems that anybody who ever *was* anybody in this field has been the author of a SCREEN published article. For instance:

B. A. Aughinbaugh, Lelia Trolinger, and Fannie W. Dunn William Lewin, William G. Hart, William H. Dudley, William M. Gregory, William F. Kruse, William S. Hockman, William H. King William H. Allen, and William H. Hartley. Paul T. Williams and Don G. Williams.

Patricia Blair Cory, Grace Thomas Stevenson, Ella Callista Clark Etta Schneider Ross, Nelle Lee Jenkinson, and June Sark Heinrich Mark J. Flanders and Mark A. May. Charles F. Hoban and Charles F. Hoban Jr. E. R. Enlow, Arnold W. Reitze, Rita Hochheimer, U. S. Burt, H. L. Kooser, Russell T. Gregg, Arch Mercey Boyd B. Rakestraw, and Ward C. Bowen.

Glen Burch, Earl Cross, Sim Wilde, and Don White. Also Sam S. Blanc and Thurman White. Seerley Reid, Edgar Dale, Ellsworth Dent. Charles Schuller, Francis W. Noel, Kenneth D. Nordberg, and Esther L. Berg. Walter S. Bell, Walter A. Wittich, Irene Cypher and A. J. Foy Cross.

Marian Evans and Raymond Evans. Angelica W. Cass. Dora V. Smith, M. I. Smith, and George Hammersmith. Harry A. Haworth Harold Hainfeld and Harold Wigren. Carolyn Guss, Vera Falconer Betty Stoops, Emily Jones, Edith Davidson, Elizabeth Golterman David J. Goodman, John W. Bachman, John Moldstad, John A. Hollinger, John Flory, John Fritz, John E. Hansen, and Jean Benoit-Levy. Also Louis De Rochemont.

L. C. Larson, W. R. Fulton, C. R. Carpenter, C. R. Reagen, W. G. Gnaedinger, L. V. Hollweck, D. F. Schutte, A. W. Vandermeer, A. G. Balcom, and W. W. Whittinghill. Paul W. F. Witt Paul Wendt, and Paul V. Mulligan. James D. Finn, James M. Meagher, James G. Sigman, James W. Brown, James P. Fitzwater, and James S. Kinder. Robert Burgert, Robert W. Wagner, Robert E. Schreiber, Robert E. deKieffer, and Alvin B. Roberts.

F. Edgar Lane, M. Lincoln Miller, J. Gerald Loughlin, E. Winifred Crawford, and F. Dean McClusky. Edwin Carmony, Lester B. Sands, Clyde K. Miller, Daniel C. Knowlton, Frank N. Freeman.

Philip Lewis, Max Bildersee, Mayer Singerman, Eric Johnston, Lester Beck, Irving Boerlin, Godfrey Elliott, Wilbur Emmert, Thomas Baird, Norma Barts, Evelyn Hoke, Anna Hyer, Gardner Hart, Ralph Steetle, Mendel Sherman, and Arthur Steimus.

Franklin T. Mathewson, Warren P. Everote, Fred L. Harclerod, Joel A. Benedict, Ned L. Reglein, Richard B. Lewis, Raymond E. Denno, Harvey R. Frye and Leslie E. Frye. Margaret W. Hudson, Norman B. Moore, Ralph A. Stout, Garret R. Weathers. Virginia M. Beard, Martha A. Gable, Edward T. Schofield, Albert L. Goldberg, Jerold E. Kemp, Ruth Y. Terry, Garland C. Bagley, Lee E. Campion, Lee W. Cochran, and Wesley J. F. Grabow.

Camilla Best and Eleanor Child. Walter B. Emery, Donald P. Ely, Milton E. Grassell, Ford L. Lemler, Edward G. Bernard, George W. Forbes, Howard S. Kresge, Phil C. Lange. Hardy R. Finch, Wesley Greene.

Stephen M. Corey, Bruce A. Findlay. Alexander H. Howard, Jr. Oscar E. Sams Jr., Stanley Stahl Jr. and Henry C. Ruark Jr., Louis Shores, Amo DeBernardis, Emilie U. Lepthien, Waldemar Gjerde, and Ming-Ching-Swen.

Now we are not claiming that in order to be somebody in the audiovisual field you have to have an article published in *Educational Screen & Audio Visual Guide*; but we are implying strongly that it may help.

*Paul C. Reed*

**Kodak**  
TRADEMARK

At Valley Oaks Elementary School, Spring Branch Independent School District, Houston, Texas—selected by A.A.S.A. for showing at its exhibit of outstanding school designs—Mrs. Lois Land, Director of Special Services, says:

**“In our modern schools,  
glass-walled rooms are hard to darken.  
That’s why we use Kodak Pageant Projectors.”**

“In keeping with modern architectural trends, our schools are built with lots of glass.

“At the same time, in keeping with modern educational thinking, we use instructional films in practically every course we teach in the Spring Branch Independent School District. And we show the films right in these hard-to-darken classrooms. So, picture brilliance is a major factor in our selection of a motion picture

projector. We have bought only Kodak Pageant Projectors for three years now, because they give us maximum brightness—and we have no maintenance troubles with them, either.”

*Kodak Pageant’s Super-40 Shutter provides 40% more light on the screen than an ordinary shutter at sound speed. Your Kodak AV Dealer has the complete Pageant story, or write for Bulletin V3-22, no obligation.*

# Israel, Giant Laboratory

by Florence Freedman

**D**URING my recent visit to Israel, I thought the term most applicable to it is "laboratory," for many experiments are going on in that small country of 8,000 square miles and two million inhabitants—experiments social, economic, political and, above all and interrelating all, educational. In Israel there are seven different types of social organization in the various cities and settlements. There are a number of political parties, of which twelve are represented in the Knesset (Parliament). There is every type of economic life from capitalist to communal, and a varied population composed of Jews from seventy countries, as well as of Moslems, Christians and Druse. Of the two million inhabitants, almost one-half had immigrated during the ten years since the State was established, among them 35,000 Arab refugees who had been invited to rejoin their families in Israel, and about 450,000 Jewish refugees from Arab lands.

Because of the nature of the population, the counterparts of all the educational problems we have in the United States are to be found in Israel, but in a more intensive form. The teaching of a new language to children and adults, the teaching of new ways of life (which often require an individual to span the centuries between a medieval and a modern world within a short time), the teaching of an appreciation of the history and ideals of their new homeland—all these present problems and challenges to educators.

Audiovisual materials, which help to pierce the barrier of a strange language and which make new concepts understandable, are highly prized and widely used. Many Israeli educators have come to the United States, as well as to other countries, to learn about methods and materials in audiovisual education. Some of these educators have been received, advised and guided by the American Council on Audio-Visual Education in Israel, of which Mrs. Esther L. Berg is Chairman, and have been greatly helped by Boards of Education and the divisions of audio-

visual education in our schools and colleges. The principal of the Hebrew University High School, for example, received his doctorate in the field of audiovisual education in the United States. He has recently written the article on audiovisual education for the Israeli Educational Encyclopedia now being prepared. After some discussion of the proper translation of the term "audiovisual" into Hebrew, and the use of two different terms for some years, it has been decided to call this kind of learning "Mamchashah" (sensory learning).

During my stay in Israel I visited elementary schools, high schools, vocational schools, the pedagogic center which serves them, teachers' seminaries, and other institutions of higher learning. I was greatly impressed by the maximal use given to the limited equipment available.

Most widespread, of course, are the audiovisual experiences which require no mechanical equipment—the field trip and the exhibition. To the tourist it seems as if all Israel is forever taking to the open road. Groups of children hike all over the country, learning history, the Bible, geography, and natural science as they go.

Adults, too, are taken on such trips. The foreign sightseer, in his bus, sees other happy sightseers from Yemen, from Morocco, from India—traveling in trucks or in wagons hitched to tractors to learn about their new land.

The exhibition as a teaching device is widely used. At the close of the school year, every elementary school had elaborate exhibits made by the students for parents and visitors to see. Those I saw in a school in Tel Aviv were graphic and ingenious representations of what the children had learned.

Filmstrips are next in popularity, with film-strip machines and films in several centers from which they are distributed to schools in each area. A great deal is being done with motion pictures, too, wherever machines are available in general teaching, as well as in special fields such as safety and health.

I was particularly interested in the use made

of audiovisual materials in citizenship education for adults. This program is directed by the Department of Public Information which works under the Ministry of Education. It reaches teenagers, adults and some of the children in hundreds of small settlements throughout the country. Each settlement receives one unified program each month, using film, filmstrips and recordings. The programs are planned at the offices in Jerusalem, created in the film and recording studios, and distributed through centers in other parts of the country. Each month the program consists of the following: a film on current events with a narration on tape to suit the language level and background of the audience; a filmstrip on a special subject each month (departments of the government, for example); and recordings of speeches and songs. Manuals for teachers and leaders, posters and other illustrative materials are prepared in Jerusalem and sent out in advance of the program. In each settlement during the weeks between the monthly programs, local teachers and leaders conduct clubs, hold meetings and lectures with the guidance of the regional representative of the Department of Public Information.

To do this work throughout the country there is just one well-equipped audiovisual mobile unit (donated by the Women's Division of United HIAS Service). This has a motion picture projector, a filmstrip projector, opaque projector, tape recorder, record player, public address system and a generator so that it can be used in settlements which have no electricity. This unit is now in the Lachish area, not far from Beersheba, where many villages of new immigrants have been established in a new "ship to settlement" program. The unit can visit only twenty settlements a month. Other programs are delivered via jeeps, with the few projectors getting hard use in several settlements every evening.

*(Continued on page 136)*

EVERY one of the more than 80 classrooms in Rochester's new East High School has been planned and built so that teachers can readily use any kind of audiovisual materials and equipment in their teaching. In fact, it was the intent of those who planned this secondary school, for the instruction of twenty-five hundred pupils, that the classroom environment itself should encourage teachers to use audiovisual materials.

A first glance at the artist's sketch of a typical classroom in East High School may not tell you all that has been done to make these audiovisual classrooms. Let me point to a few of the features.

Audiovisual blinds are being furnished for all rooms so that outside light may be controlled and rooms darkened to meet all projection standards.

A tri-purpose white metal chalkboard is in the middle of the front wall, which may be used as a chalkboard, as a magnetic bulletin board, and, under conditions where the shape and light level of the classroom permit, as a projection surface. (This has been tried in a prototype installation and found to be effective.)

There are electric outlets on four sides of each room.

A conduit runs from the rear to the front of each room carrying the wires for projector speakers. Projectors are plugged into the rear wall; speakers in the front.

Facilities for the reception of closed and open circuit television programs have been provided. Outlets at the front of each classroom connect via conduit with the radio-television studio and the Forum Room. Here, at this center, open circuit programs can be received and re-distributed to all classrooms; or closed circuit programs originating here or at twelve remote locations in the building may be redistributed to all classrooms.

The usual public address system facilities provide speakers in all classrooms connected with a complete sound distribution system.

Added space has been provided as a conference alcove at the rear of each classroom with bookshelves, cabinets, and display space.

Planning for this building, which will be in use in September 1959, began in January 1954. An "Audio-Visual Committee" was but one of more than twenty committees that

worked conscientiously for six months to determine and set down their ideas of what was needed in the new school if it were to achieve its purposes. Each committee was made up of teachers from several schools and experts from the community. The audiovisual committee, for instance, included Adrian Ter Louw from Eastman Kodak Company, Dr. Sherwin Swartout from the State Teachers College in nearby Brockport, an engineer and program director from television stations, in addition to teachers and audiovisual specialists from the schools.

The report of the Audio-Visual Committee for East High School was submitted to the Steering Committee in June 1954.\* By the end of that summer it had been thoroughly reviewed and consolidated with the reports of other committees. The master plan and specifications were then approved by the Board of Education and submitted to the architects. (All of the preliminary planning had preceded the selection of architects.) In effect, the specifications said to Faragher and Macomber, the architects, "here is what we want to do in this school, now you design the most efficient structure in which these things can be accomplished." Practically every single recommendation of the audiovisual committee has now been built into the new school.

So it didn't just happen that every one of the more than eighty classrooms in this school is an audiovisual room. It is the result of careful and reasoned planning. Here for instance is the kind of convincing statement the committee made about classroom audiovisual facilities in their report.

"In the study made by Dr. Anna Hyer of Rochester's secondary school audiovisual program in 1951, the needs for classroom projection were emphasized. She interviewed teachers and principals in eight high schools concerning the deterrents preventing teachers from using audiovisual materials. She reported, 'The need for darkened rooms was mentioned more frequently than any other need. A large percent of those interviewed felt that the ideal was every room darkened. Four of the eight principals specifically mentioned this also.'

*"If the committee were to make*

\*Copies are available upon request to Dr. Howard C. Seymour, Superintendent of Schools, 13 S. Fitzhugh Street, Rochester 14.

*but a single recommendation in regard to the audiovisual facilities for a new East High School, it would insist that there be complete light control for every single classroom. This seems to the committee a minimum essential requirement upon which any use of projected materials in the instructional program must be based."*

The Audiovisual Committee was also concerned with the audiovisual equipment teachers would need but first it wisely wanted to make sure there would be an opportunity to use that equipment and to use where it was needed—in the classrooms. The committee did not, however, make specific recommendations as to how many pieces of each kind of equipment should be provided. It established a principle and a goal, *that all kinds of equipment should be made immediately available to each teacher.* In other words, if a teacher is to do his best teaching he has a right to use whatever audiovisual equipment he believes is necessary. Further, the administration has the responsibility to make that equipment readily available so that it can be used with the least effort. Specifically here's what the committee said in its report:

"Based upon the instructional needs of teachers as outlined in section IV of this report, all teachers should have immediate access to the following kinds of audiovisual equipment:

1. Overhead projector
2. Opaque projector
3. Filmstrip projector
4. 2x2 slide projector
5. 16mm sound motion picture projector
6. Tape recorder
7. 3-speed record player
8. Radio receiver

by Paul C. Reed

# Each Room An AV Room!

9. Television receiver  
"The frequency of use of any of this equipment will be somewhat dependent upon the teacher, the

subject being taught, and the availability of the equipment. The committee believes the most critical deterrent to the use of audiovisual

methods has been a lack of conveniently accessible equipment. The exact quantity of equipment

EAST HIGH SCHOOL  
ROCHESTER, N.Y.

# TEACHERS NEED IN-SERVICE AV TRAINING

by *Edwin E. Henrichsen*

**A**N old Chinese proverb claims one picture is worth 10,000 words. If we accept this, we must recognize the importance of audiovisual materials in today's progressive teaching program. Methods and procedures once successful in the school rooms of the past are presently inadequate, and today's teachers are experiencing the need to adopt improved techniques and methods to reach the minds and stimulate the thinking of youth.

The process of strengthening the effectiveness of a faculty cannot be left to chance. Comprehensive programs for in-service education are needed throughout the American school system. The continued improvement of teaching methods should be of utmost concern to all who have a part in existing and future educational programs.

It follows that plans designed to bring about this condition can be most effective after a teacher has had on-the-job experience. This then implies that such a goal might be achieved through a program of informative, in-service education.

Currently, educators accept the premise that the use of audiovisual materials improves instruction. There are three challenges in initiating the use of teaching aids in the class room. First, the materials must be made available; second, the desire to use the materials must be engendered in the heart of the teacher; and third, the teacher must be trained to achieve competencies in utilization of audiovisual materials.

An investigation of the audiovisual in-service teacher training programs in several of the leading school districts throughout the United States has been made to determine the methods, procedures, techniques and materials found to be of greatest value. Through research and interviews, a check list was formulated to aid in obtaining criteria.

Eighty-eight school districts were selected from a roster of the participants of a national audiovisual conference sponsored by the National Education Association Department of Audio-Visual Instruction held during March 1958. Twelve other school districts in the central and western states were also chosen to balance the geographical distribution. A letter asking for indication of cooperation and interest was mailed to each selected district. Eighty-five replied in the affirmative and in turn were mailed check lists. Of the 85, 78 (over 90 percent returned the check list.

The data collected indicated that the size of the school district did not necessarily assure a

## Here are some recommendations for in-service teacher training in audio-visual techniques, based upon a nationwide survey of school districts.

good training program; rather, the audiovisual in-service training of teachers was individualistic for each school district and was primarily determined by the type of leadership existing within the administrative staff.

A training method which is effective continues to be used. It was interesting to note that many of the school districts indicated the use of similar kinds of in-service procedures.

Recommendations were made based upon the techniques, materials, facilities and supports utilized by more than 50 percent of the school districts participating in this study.

The accumulated data suggests that an optimum audiovisual in-service teacher training program should include the following categories and subdivisions:

### 1. *Department organization*

a. The district should have an audiovisual director.

b. He should be a full time specialist.

c. The district should have a formally organized audiovisual in-service teacher training program.

### 2. *Formal group activities.*

a. The audiovisual department should sponsor college courses in audiovisual education.

b. Institutes and short courses in audiovisual education should be held by the department.

c. Workshops should be conducted.

### 3. *Informal group activities*

a. The audiovisual director should conduct individual faculty meetings in the schools to encourage audiovisual methods in teaching.

b. An orientation meeting for new teachers should be held to acquaint them with the audiovisual program.

c. Demonstrations of new materials, equipment and devices as teaching aids should be given.

d. Study groups for audiovisual methods should be formulated in the subject areas.

e. Preview committees should be formulated to select audiovisual materials for classroom use.

### 4. *Individual teacher techniques*

a. The audiovisual director should hold individual teacher conferences.

b. An audiovisual bulletin should be issued by the director.

### 5. *Indirect techniques*

a. The director should work in close cooperation with supervisors of other subject areas.

b. He should be included in the curriculum development committees.

c. Audiovisual exhibits should be provided to actively increase the interest of teachers.

d. The director should utilize specialized re-

source personnel in the areas in which they can be most efficiently used.

e. He should contact people of the community to secure teaching aids.

### 6. *Materials provided*

a. The district should provide materials for the production of teaching aids.

b. Audiovisual magazines should be purchased for all professional libraries.

c. Audiovisual books,

d. Catalogs of materials,

e. Recordings for audiovisual in-service training,

f. Films for teacher training, and

g. Filmstrips to promote in-service professional teacher growth should be in the professional libraries.

### 7. *Physical facilities provided*

a. There should be a preview room in all school buildings.

b. The district should supply a laboratory where materials are produced.

c. A laboratory where teachers could originate teaching aids should be a part of the facilities provided.

d. There should be storage space in all the individual rooms of the buildings for audiovisual equipment, materials and devices.

e. A professional library should be in the central administration building.

### 8. *Financial support*

a. Money should be furnished by the school district to provide materials for the professional libraries.

b. The school district should provide money to pay for travel to national audiovisual conferences.

After this basic program is well established in a district the following extensions of the program would improve it:

1. Released time for inter and intra-school visitations to observe audiovisual teaching techniques in use.

2. Field trips to stimulate teacher interest in audiovisual methods of instruction.

3. A professional library in all the individual schools.

4. Released time for the individual teacher to prepare teaching aids.

5. Provide a special fund to assist the teacher with the enrollment fees of audiovisual course work during the summer.

The organization and continued success of an effective audiovisual in-service teacher training program has a notable relationship to the interest and continued vision of the administrative staff of the school district.

by Kenneth P. Kidd

# Dynamic Aids for Teaching Math

**T**HE power and usefulness of mathematics lie primarily in the abstract quality of its symbolism. Yet in this quality of abstraction there exists a great danger—the invitation to the teacher to over-emphasize the development of operational skills at the expense of understandings, meaning, and applications. The danger of omitting many of the meaningful experiences in the mathematics classroom is very likely today with the existing pressures for accelerated mathe-

tics programs.

A variety of carefully selected aids that pupils can see and touch and make are being used effectively by many teachers to help make mathematics an interesting, dynamic, meaningful and useful subject. These include items such as the following:

(a) *Tools and Equipment*—measuring tape, calipers, stop watch, slide rule, transit, alidade, calculator, drawing instruments, chalkboard

equipment, flannel board, spherical globe, parallel rulers, pantograph, graph paper, lettering pens, stapler, hammer, scales, units of volume measure, cardboard trimmer, duplicating materials, and storage cabinets.

(b) *Models and Manipulative Materials* — abacus, mock-up of vernier caliper, demonstration slide rule, hinged strips of wood to demonstrate angle, plastic square-inch grid for area measure, adjustable quadrilateral, ones-tens-hundreds materials, fractional disks, and models for  $V = lwh$  and  $A = \pi r^2$ .

(c) *Printed Materials* — reference books, charts, maps, and booklets.

(d) *Projected Materials* — motion films, filmstrips, slides, opaques, and transparencies for overhead projector.

(e) *Raw Materials* — wood, cardboard, plastic, screws, bolts, flannel, ink, glue, rubber bands, paint, and nails.

It is important that the selection of instructional aids in mathematics be made a school-wide or county-wide project. Some of the aids such as stop watch, scales, globes, calipers, polar coordinate graph board, films and filmstrips may be used only occasionally by a teacher; the purchase of these items should certainly be a cooperative affair in order not to have duplications of little-used items. At the present time there is great need for teachers to put their creative efforts together in designing and using new instructional aids.

Aids are needed for more effective teaching of large classes. An example is the overhead projector which uses transparencies with overlays. Transparencies may be prepared from various forms, carefully made drawings, graphs, numerical tables, quizzes, student prepared solutions, etc. These forms may include such things as income tax forms, bank checks, promissory notes, rectangular and polar coordinate grids and nomographs. Drawings may include plane curves, scales for teaching the use of a ruler, slide rule scales, optical illusions, indirect measurement, vernier scales, map projections, latitude and longitude drawings, LORAN maps, as well as figures for geometry theorems. Numerical tables may include a duodecimal multiplication table, powers of 2, values of 10 raised to power of .1, .2, .3, etc., values to illustrate variation, measurements of circumference and diameter of circles, and Pascal's triangle.

These aids are valuable for the following reasons:

(a) Many items can be made available to the teacher without the time and effort required in class period to present them on the chalkboard.

(b) The overlays permit the teacher to develop the presentation one part at a time.

(c) A small drawing or chart may be enlarged to a size large enough for each member of a large class to see clearly.

Materials are also needed for pupil laboratory use. There are many topics in mathematics which lend themselves well to individual measuring, experimentation, and construction. This individual work can be done either by a few pupils or by the entire class. Examples of materials may include fractional disks, ones-tens-hundreds materials, circular objects for determination of the value of pi, cardboard for constructing a slide

rule scale, adjustable figures and drawing instruments for experiments in geometry, wax paper for folding, and games for drill in recall of computational facts.

The selection of instructional aids should be on the basis of the following criteria:

(a) Relation to the objectives of the instruction,

(b) Simplicity and convenience of use,

(c) Cost and extent of use,

(d) Appeal to student,

(e) Accuracy, authenticity and durability

The first part of any instructional program must be the clarification and agreement on the objectives. After this has been done those aids should be selected which experience has shown can be used most effectively to reach the objectives. In other words, the aids should be related to the objectives. For example, if the objective of a slide rule unit is that of developing skill in the use of the slide rule, then instructional aids would probably consist of student slide rules, a demonstration slide rule or a scale printed on a transparency for the overhead projector, a calculating machine for checking accuracy, and a film or filmstrip. If the purpose also includes the understanding that the slide rule is a device for adding and subtracting line segments which represent the logarithmic values of numbers from 1 to 10, then the pupils might each be involved in constructing line segments to represent these logarithmic values and transferring these lengths to movable cardboard or wood pieces for a slide rule.

Each aid should be simple enough to clarify the mathematical concept and also simple enough for the pupils to use. For example, a transit consisting of a wooden sighting arm and an enlarged  $360^\circ$  protractor might be suitable for a junior high school class, whereas the trigonometry class might desire the precision of measurement afforded by a transit having vernier scales, telescopic sights, and machined metal parts. Teachers will be likely to pass up those aids that require time-consuming preparation, are not available when needed, involve learning complicated operational procedures, or are not suitable for use in the way that they like to use them. If two instructional aids are found to be equally effective in the instructional program, priority should be given to the cheaper one and the one which will be used more extensively.

An aid should have those qualities that will cause pupils to become interested in it. For example, pupils may become curious by the *novelty* of using a rubber band for enlarging a drawing; many, especially the capable ones, may become interested in determining just *why* the homemade trammel draws an ellipse; a book that is well written and *attractively illustrated* will be read in preference to one not possessing these qualities; the alidade may appeal to many because it is so *useful*; well-constructed *pupil-made* aids usually have a great appeal especially if the pupils feel pride in the project.

An instructional aid should be made accurately. It should not be used to teach incorrect information or to develop undesirable learnings. It should also be built durable enough so that it will withstand repeated use by people not well trained in how to use it.

# Indiana Rules for AV Facilities

I.C.A. students consult with specialists while planning a filmstrip on school plant facilities.

by John Moldstad

INDIANA educators have been quick to realize the value and potential effectiveness of audiovisual materials in teaching. Furthermore, they have taken steps to see that leadership, materials, finance, and facilities will be provided within school systems and in individual school buildings for the development of strong audiovisual programs.

In August, 1955, the Commission on General Education of the Indiana State Board of Education passed two rulings affecting the audiovisual program.

The first provided for leadership in each school building. It required that each building have an audiovisual program in operation with the person appointed as coordinator being professionally trained and fitted and having had at least five semester hours of courses in audiovisual education, or the equivalent.

The second ruling required each school to have a library, defined as an area where instructional materials, organized for use, are housed to provide easy access for pupils and teachers. It further stated that the school shall spend as minimums from \$1.25 to \$2.50 per pupil per year for approved and new library books and audiovisual instructional materials with no school spending less than \$100 each school year for

these purposes. These expenditures are to be divided between library and audiovisual instructional materials in such proportions that a balanced and well-rounded educational program results.

After these mandated standards were passed, members of the State Department of Education and other state leaders began to consider the specific recommendations concerning a third badly needed state mandated provision—the requirement that adequate audiovisual facilities be incorporated into each newly constructed classroom. This obviously was an objective requiring careful planning. The stages leading to its realization are reviewed here since it is believed educators in other states might want to initiate similar plans of action.

### *Utilize Experts and Specialists to Obtain the Facts*

A perusal of publications and periodicals quickly revealed a lack of standards, or even agreement, concerning the scope and types of audiovisual facilities which should be included in today's classrooms. A steering committee, therefore, consisting of experts in audiovisual education and schoolhouse planning was invited by the State Superintendent of Public Instruction, Wilbur Young, to participate in a series of work sessions.

This group consisted of five Indiana city audiovisual directors, three university audiovisual representatives, two Indiana architects, three Indiana schoolhouse planning experts, five out-of-state specialists in lighting and sound, and the Executive Vice-President of the National Audio-Visual Association. Mrs. Sullivan, Administrative Assistant in Audio-Visual Education, State Department of Public Instruction, was appointed chairman of this group.

During eight sessions this group developed suggested standards which were incorporated into publication entitled *Planning Schools for Better Instruction*.<sup>1</sup>

### *Provide Opportunity for Open Discussion and Critical Appraisal of Proposed Standards*

In an effort to give all affected groups an opportunity to discuss and react to these building standards, copies of this publication were sent to all state audiovisual directors, superintendents, and architects.

Wide publicity was then given to an Indiana State Conference on School Planning for Audio-Visual Education which was held in In

<sup>1</sup>Copies may be obtained by writing to Mrs. Altha Sullivan, 227 State House, Indianapolis 4, Indiana.

Indianapolis during October, 1955.

At this conference each of the major suggestions was presented by a member of the steering committee. Panel members representing various institutions affected by these suggested standards reacted to them and finally members of the audience were invited to participate in the discussion. The panel members and members of the audience indicated approval of these proposed classroom audiovisual standards.

As a next step, Mr. William Wollenweber, Buildings and Grounds Superintendent, Elkhart, Indiana, and the author were asked to review these recommendations and prepare a brochure pointing out: (1) the important contributions audiovisual materials can make to instruction and the need for adequate audiovisual facilities in each classroom, (2) the inadequacies of present regulations concerning provisions for school audiovisual facilities, and (3) recommendations for specific standards concerning audiovisual facilities for all new Indiana classrooms. This brochure incorporated statements of recognized leaders in education and industry and was enclosed in an attractively designed cover.<sup>2</sup>

#### *Keep Your Administrators Informed*

Mr. Alfred Speck, Director, Division of School House Planning, Department of Public Instruction, was requested and was granted a hearing before the Commission on General Education so that these proposed changes in classroom standards for audiovisual facilities could be presented.

Realizing that personal contact is usually the most effective and satisfactory method of communication, members of the state department of education, the universities, and the state audiovisual association have continually attempted personally to keep school administrators in their areas aware of new developments in audiovisual education. They have also tried to alert them to advancements and shortcomings of Indiana's own local audiovisual programs.

#### *Visualize Your Presentation to Clarify and Save Time*

Since the time which can be allotted to each item on the

<sup>2</sup>Copies may be obtained by writing Dr. John Moldstad, Audio-Visual Center, Indiana University, Bloomington, Indiana.

monthly agenda of meetings of state commissions is listed, the main points in this presentation were visualized on 2" x 2" colored slides and the information was also passed out in mimeographed form.

In addition to the initial presentation before the Commission, second and third hearings were conducted to answer further questions and invite public reaction to the proposed changes.

On February 14, 1958, the Commission unanimously passed the following mandated regulations concerning minimum audiovisual facilities for each room to be utilized for regular classroom instruction:

#### A. Light Control

1. Facilities provided so that the light level in each classroom can be reduced easily to 1/10 ft. candle.

#### B. Electrical Installations

1. In addition to the regular switches, an additional room light switch installed on the wall of the classroom opposite the side of the room on which the projection screen is mounted.

2. One electrical outlet provided at the rear of the room for projection equipment; a second outlet provided at the front of the room for record players, tape recorders, and overhead projectors.

3. Electrical outlets deliver 110 volt alternating current. The outlet serving projection equipment must be fused for no less than 20 amperes.

4. Sufficient circuits provided to allow simultaneous use of equipment in any number of adjacent classrooms.

5. Wall outlets not be more than 36 inches above the floor; if installed in the floor, outlets must be recessed and protected.

6. New schools must use 1 1/4 inch conduit for their central sound system. This will permit the installations at a later date of a coaxial cable needed for developments in the television field.

#### C. Acoustics

1. The use of acoustical tile, acoustical plaster, and other sound absorbing materials, must be used to control reverberation time. An experienced acoustical engineer should be consulted to determine the proper acoustical treatment.

#### *Conduct a Campaign to Facilitate Understanding and Use of New Regulations*

In order to inform Indiana school administrators of the new regulations and to assist them in achieving them, several approaches were

utilized. First, these regulations were reviewed in the March 1958 issue of *Indiana Educational Activities*, a State Department of Public Instruction publication which goes to over four thousand educators throughout the state.

Second, Mr. Speck and Mrs. Sullivan served as advisors to a group of International Cooperation Administration foreign students. Under the direction of Mr. Dennis Pett, Production Supervisor at the Indiana University Audio-Visual Center, these students chose as a practice campaign project the planning and production of visual materials designed to inform educators about these new rulings and to suggest ways they might best achieve them.

Public school administrators were singled out as the primary audience for this campaign. Architects, teachers, and the general public constituted the secondary audience.

Two sets of colored 2" x 2" slides were produced by the students. One set informed administrators of the importance and value of audiovisual materials in instruction. The second set visualized the Commission's rulings and presented alternative types of light control facilities, etc., which satisfy these regulations.

These visual materials were presented by Mr. Speck and Mrs. Sullivan as part of their talks at six regional meetings sponsored by the State Department of Education each year, and at the spring meeting of the state audiovisual association.

Multi-color brochures incorporating the ideas in the two slide sets have recently been completed by these same students and will soon be mailed to administrators and architects throughout Indiana.<sup>3</sup>

These activities have been fascinating, but I think the implications are even more so! They show that educators can achieve important educational goals if they have a defensible objective and plan to carry through a carefully designed program for its realization.

<sup>3</sup>Copies of each brochure can be obtained by writing Dr. John Moldstad, Audio-Visual Center, Indiana University, Bloomington, Indiana.

The author wishes to express his appreciation to Mrs. Altha Sullivan, Administrative Assistant in Audio-Visual Education and Mr. Alfred Speck, Director, Division of School House Planning, Indiana Department of Public Instruction, for their suggestions and assistance concerning this article.

# Television and Education—Revisited

*Ten years ago this month, before educational television as it exists today was more than a dream in the minds of far-sighted educators, Educational Screen published a symposium: "Television and Education." To this collective glimpse into the future the members of the magazine's advisory board contributed their ideas.*

SETTING the theme in his editorial, Paul Reed described the kinescope tube as "a new educational screen with tremendous implications." James W. Brown began the symposium with considerable insight: "Conceivably, television could change patterns of home life through direct competition with those out-of-home activities now tending to separate family members. It could stimulate deeper appreciations of art, literature, music and dramatics. It ought to be a means of improving homemaking and other skills. It may likewise be possible that with intelligent use of the medium and with wide availability of television, some of the formal school's present functions may be performed better in the future on an informal, televised basis."

Edgar Dale predicted that television would be "a great boon for improved education. Many parents and taxpayers will now see what good teaching looks like." He warned about "our usual failure in the educational field to make use of these new instruments of education." And Walter S. Bell claimed: "If these two mass media of communication—motion pictures and radio—can result in great changes independently, certainly the two fused together into television can become the most powerful medium of mass communication ever dreamed of."

A more technical prediction came from Edward S. Bernard. "When the equivalent of the magnetic tape recorder is developed to permit taking television material off the air, perhaps the greatest single step forward in visual education will have been accomplished.

School-made transcriptions of appropriate telecasts may ultimately furnish the answer not only to cost reduction, but, as in radio, to the problem of adapting materials to the need of individual groups working at different paces and on varying programs."

Possible and presently realized drawbacks were clearly stated in more than one essay. James W. Brown said: "Timing of programs will present the same obstacle to school use which is now common with regular radio programs. The lack of specially assigned frequencies for educational use alone suggests strongly that 'public service' time on commercial stations may be all that is left to the schools. Such time will become increasingly more difficult to schedule."

Irving C. Boerlin predicted that television "will be used only when more versatile and adaptable teaching aids are not available." F. Dean McClusky suggested that "television will have to make long strides forward in technical improvements before it becomes a potent factor in education. . . . Motion picture films, slides, transcriptions, the radio and other audiovisual materials will not be replaced by television. . . . Television makes it possible for teachers to have in their classrooms material, which, up to the present time, is unavailable in any form."

Francis Noel asked: "We are told that many television programs will be on film. If this is so, aside from a small percentage of the telecasts bringing immediate results to us, what will be its advantage over the more flexible motion picture medium? Perhaps as television causes

more and more pictures to be produced, this may be its greatest contribution to the improvement of instruction."

Amo DeBernardis wrote: "I think we are not going to plan educational programs around television but rather adapt television to the curriculum. . . . All of us should look to television as another teaching aid and apply the same criteria to it that we would to any other teaching tool to bring it into proper perspective to the learning process. There is no doubt that educators all over the country will swarm to television as a teaching aid. However, as soon as the novelty wears off, it will find its proper place in the educational program."

Summing up the future of television, Elizabeth Golterman excellently states: "When we read that leaders in the industry are thinking in terms of two-way television and global telecasts, the impact of television in future education defies calculations. World news and calamities will be viewed simultaneously with their occurrence, legislative bodies will be seen and heard in session, and artists and scientists of note will enter the classroom as teachers. World distances so narrowed to that fraction of time required to transmit the image from the studio to the screen will require revisions of standards and languages.

"These face-to-face experiences will give the student a new perspective of the world he lives in, a deeper understanding of the events of the times, and a broader sense of his responsibility as a leader in the world of tomorrow. As educators we need the 'vision' to keep pace with television."

# Bulletin Board Blues

by William C. Miller

MILD-MANNERED TEACHER GOES BERSERK; DESTROYS CLASSROOM IN FIT OF RAGE

CENTERVILLE—April 17 (AP)—Residents of the quiet town of Centerville were shocked today when Miss Sadie Nobleman, teacher for over 30 years at P.S. No. 2, suddenly ran amok in her classroom tearing bulletin boards from the wall.

Fellow teachers and Miss Nobleman's students expressed surprise at her conduct but pointed out that Miss Nobleman had not been herself since additional bulletin boards were installed in her room. They expressed the belief that Miss Nobleman "suffered from fits of despondency" when faced with the problem of how to fill the bulletin board area.

Miss Nobleman was not available for comment.

Of course, this newspaper article is not true but the feelings of the teacher described will be understood by any teacher who looks upon constructing bulletin boards as a burden. One can see the unpleasantness that "covering a bulletin board area" entails for many teachers when it is noted that in most schools, hall bulletin boards are assigned from a roster like other unpleasant duties. Taking turns at this task is designed to minimize its unpleasantness but this in reality is not a solution.

One teacher, a confirmed bulletin board hater who finally became the school's bulletin board expert, analyzed her attitude:

"One reason I hated to make bulletin boards was that my purpose and target audience were wrong. I made the bulletin boards in my room to please myself, other teachers, the administrators, and even passers-by. I judged them by adult standards and was never satisfied with the results of my efforts.

"Now I recognize the bulletin board as an educative and creative medium. I look upon it as an effective teacher partner, my most

easily accessible audiovisual tool with the exception of the chalkboard. My approach now is to encourage and guide pupils in planning and making bulletin boards. Involving students in making displays for a specific instructional purpose adds to pupils' understanding and enjoyment and I find it a rewarding experience. The teacher who hates bulletin boards is often the one who says 'It's easier to do it myself.' It may be true that it is easier to do it yourself but this leads to tasteless displays and reuse of the same materials and ideas year after year. It also robs the teacher of the opportunity to use the bulletin board as a method of improving pupils' skills and abilities.

"Of course, I occasionally make a board on my own to stimulate interest in a new unit of work. When I do this I have a specific purpose in mind and find it a real challenge to make a board that will be interesting. I find myself looking forward to the effect it will have on my youngsters. For the most part, however, youngsters do the displays so that an occasional board made by me is a treat for the youngsters and for me since the responsibility for planning and constructing most boards now lies with them."

This teacher refers to a guided integrated presentation which has been planned to do a specific instructional job.

Here are some questions that we

can ask ourselves to make certain that student-planned and constructed bulletin boards make their full contribution as an instructional medium.

1. Did the bulletin board grow out of pupils' needs and is it the result of pupil planning and participation.

2. Is it cooperative rather than competitive in its content?

3. Was the bulletin board cooperatively planned and constructed?

4. Did the experience give the students involved an opportunity to:

a. Practice self-direction and improve social and democratic skills?

b. Engage in a satisfying artistic and creative experience?

c. Develop skill in searching for and using information?

5. Did the bulletin board provide a good learning experience for students in the classroom not involved in its construction and planning?

6. Was an attempt made to evaluate the bulletin board by the group who produced it?

Bulletin boards which are made using these questions as a guide are never boring to youngsters, for who knows better what phase of a subject is important or interesting to a class than the class members themselves? Moreover, such displays are always more interesting to the teacher for she is challenged to make helpful suggestions to the group, to help them evaluate their efforts, and to aid them in securing needed materials for display.

Perhaps the ultimate in teacher-pupil planning is when a group can function almost independently, setting its own goals, determining its own procedures, and using the teacher as a resource person to help them secure the materials and information the group feels it needs to solve its problem.

# Filmstrips

by Irene F. Cypher

I went on an unforgettable trip with the mobile unit to see two programs in villages of recent settlers from Yemen and Morocco. The first was held indoors and the second outdoors under the stars. The director explained that it takes quite a long time before some of the older people and many of the women come to see the films. The experience is completely new to them and they are fearful or shy about it. They are more likely to attend an outdoor showing for they can sit or stand on the fringe of the crowd and not feel so conspicuous, or so committed to participation in this strange new event.

The programs which I saw consisted of a newsreel summary of the ten years of Israel's statehood, a filmstrip on "Minorities in Israel" which dealt with the Christians, Moslems, and Druse, and a song program. The audiences were intensely interested.

Similar programs were given in the Arab and Druse villages. I had an interesting visit with the Druse teacher who directs adult education in the Arab and Druse villages in the Haifa area. (He had been in the United States last year where he appeared on television and lectured in various universities.) He and the other people in this program were enthusiastic about teaching through films and hoped that with more equipment this program could be expanded.

In addition to the materials produced in Israel, American films, filmstrips and recordings, distributed by the United States government or sent by producers and individuals from the United States to Israel, are in wide use throughout the country in every type of school on every educational level. As more equipment and more materials become available, Israel will want to—and will know how to—make very effective use of them to help solve its educational problems.

It is good occasionally to review material that departs from the "beaten track." Much of what came in this month was a bit different either in general subject matter or in production techniques. There are so many things we need to learn about, and so many things to call to the attention of the boys and girls in our schools that it always seems sad to us when everyone keeps on talking about the same old things in the same old way. This is in no way intended to minimize the importance of stressing basics, and does not imply that we do not need to give proper consideration to fundamentals. But even the most basic of fundamentals might be remembered longer if it were made just a bit attractive or interesting (heresy, perhaps, but just the same we mean it!). While we are on this matter of "basics," we should also like to mention the importance of beauty and humor. Children in particular respond so wonderfully to true beauty and sincere humor. It seems a shame not to bring a little more of both qualities into the production of materials intended for use in classroom work. One of these days we intend to expound at greater length on this matter. Think it over when selecting materials for your own class, and see what happens when you use something beautiful to illustrate a point that has always been considered dull. This is particularly true with filmstrips, and we still need filmstrips in hitherto unexplored areas of the curriculum.

## Demand, Supply and Balance

(9 strips, color; produced by The Conservation Foundation, 30 East 40th St., New York City 16; \$49 for complete set; \$18 for any set of 3 strips).

This is one of the most intriguing sets we have previewed in a long time and one with a host of possibilities to suggest for utilization. Basically the set is said by its producers to be created for the express purpose of exposing people to concepts concerning their environment. Certainly this is needed, and is a worthy intent! To do it, the various pictorializations in the strips give us material on which to build awareness and appreciation of the items which vitally affect our living. As we become aware of the

nature of these things we are led to consider very important facts — that there is no substitute for water, space and pure air; that we must plan for strategic use of natural resources; that modern scientists are pushing back frontiers in the study of life on this earth of ours. The series is actually divided into three units—Unit 1, "What We Need," "Where We Find it," and "How to Get It" for primary grades; Unit 2, "The Demand, The Supply, Balancing the Supply and Demand" is for junior and senior high grades; Unit 3, "Can the Biologist Meet the Demand," "Can the Chemist Renew the Supply," "Can the Physicist-Engineer Strike a Balance?" is for senior high grades. At no time is the viewer given a series of "pat" statements. The technique has been followed of posing questions that force the viewer to look at a particular picture, find answers and form his own concepts, or draw conclusions himself. There should be some lively classroom discussions with these filmstrips; certainly there will not be mere passive viewing, and they offer much in the way of lesson-stimulant power. We refuse to recommend absolute grade levels for material of this type because there are so many possibilities for using it with different age groups. It is primarily most valuable for science and social science units; it should also be recommended for nature study, camp and scout groups, and for any unit on conservation.

## Moody Science Filmstrips

(2 strips, color, produced by the Moody Institute of Science, Los Angeles 25, California; \$6 per strip). Like the world, the curriculum is full of a number of things, areas that could be made very interesting if approached from a different viewpoint. In *How We See and Hear* the producers indicate that man has been provided with eyes and ears to see and hear. If these senses are properly used there are many interesting and wonderful sights and sounds to learn about. This filmstrip could be made the basis for a motivation lesson of interest in the world around us at different grade levels from elementary through high school. In *Wonders of Snow* we have a series of close-ups of design patterns found in snow crystals. These are in-

<b>SCIENCE FILMSTRIPS</b>

restering and offer much in the way of suggestions for creative art work projects. The photography is good in both filmstrips and the color quality excellent. The same producer has recently announced production of flat picture sets, and one of the first of these sets deals with "Wonders of Snow." The combination of large pictures for display and study and the filmstrip provides an excellent combination of resource material.

### **Parliamentary Procedure in Action**

(revised) (3 strips, color; produced by Educational Filmstrips, Box 289, Huntsville, Texas; \$16.50 per set). Many people today find themselves faced with the problem of chairing a meeting and not knowing the first thing about parliamentary procedure. These filmstrips, based on the book, "The How in Parliamentary Practice," with special reference to Robert's Rules of Order, will certainly help them to handle almost any situation from calling the meeting to order, presenting reports, introduction of motions, handling of new business to closing the meeting. This is not an attempt to visualize a particular meeting nor to provide a story sequence. The strips will be at their best if used

in connection with consideration and discussion of the techniques involved in conducting a meeting. Personally we would recommend projecting them several times — to give an overall presentation of the general situation and then in sections to illustrate each point as discussed. They will be helpful in both English and social studies classes, and very good for newly elected groups of officers of clubs and student organizations. They are also to be recommended for adult groups and clubs.

### **Plantation Life in Colonial Virginia and Planter-Statesman of Colonial Virginia**

(2 strips, color; produced by Colonial Williamsburg, Williamsburg, Va.; \$5 each). We can never fully appreciate the present unless we also understand the events and people of the past. The two filmstrips considered here help to recreate a picture of life and events in the formative years of our history. The first of course gives an overall view of life on a large plantation of the Mt. Vernon type. It unfolds a story of daily activities as well as scenes of family life. The second strip concentrates on the role of the plantation owner as a statesman

and his part in drafting laws and formulating governmental patterns which eventually helped to shape our own government today. The strips help to create something of the atmosphere of colonial days and are to be recommended for social studies units.

### **The Race for Space**

(single strip, black and white; produced by Office of Educational Activities, The N. Y. Times, 229 West 43 St., New York City 19; \$2.50 single strip, \$15 for series of which this is a monthly unit). Filmstrips are a "natural device" to use in conjunction with newspapers, periodical and journals. This being so, you have only to look at the amount of space allocated in newspapers today to "space research" to realize the timeliness of this particular strip. It presents a summarization of the activities currently in progress in both the United States and the Soviet Union; it also calls attention to the various attempts to penetrate into space by rockets and satellites, and indicates some of the barriers to be overcome as jet planes venture into higher altitudes. The content of the strip has high potential for pupil interest today and it can well be used in both social studies and in science classes at both junior and senior high school level.

## **AUDIO-VISUAL INSTRUCTION**

By

**JAMES W. BROWN, RICHARD B. LEWIS,**

**FRED F. HARCLEROAD**

**All at San Jose State College**

**Ready in April 1959**

This text on audiovisual methods provides concrete, practical information on the use of instructional materials to plan and carry out learning activities. Examples of use have been drawn from all subject fields, from kindergarten through college. It is the first audiovisual text to use an inventive and stimulating format in which profuse illustrations are correlated with the text. Emphasis throughout is on the principle that learning is most effective when materials are integrated with instruction.

# Film Evaluations

by L. C. Larson and Carolyn Guss

Scene from the Brandon Film "Prehistoric Images: The First Art of Man"

## Prehistoric Images: The First Art of Man

(Brandon Films, Inc., 200 West 57th Street, New York 19, N. Y.) 16 minutes, 16mm, sound, color, 1955. \$250.

### Description

"The artist records for those who come after the image of the world he knows." Thus, begins a journey backward in time, revisiting the subterranean world of the cave-painters of prehistoric Europe. Through the co-operation of the French and Spanish governments, the film recreates for the beholder the rarely seen images traced on the walls of the caverns of Lascaux, Pêch Merle, Niaux, and Trois Frères in France and Altamira, El Castillo in Spain more than fifty centuries ago, when these early artists sought shelter there from the bitter cold left behind by the retreating ice-sheet.

The film begins with a montage of images recorded by the familiar artists of our time, then dissolves from century to century back to the earliest art of history, in ancient Egypt. Beyond this point, the viewer travels in complete darkness, with only the sound of dripping water thousands of feet below the earth's surface, to the subterranean gallery. A finger of light appears to trace the bounds of this world. For full minutes the camera records the awe of the spelunker, moving through great caverns and tortuous passages, until at last the searching circle

of light pauses on the signature of our host, the silhouette of a human hand.

We now begin to see, in succession, the strange beasts which populate this ancient hunter's world, traced with skill and simplicity onto the walls and cave formations. Some, like the horse, still live in the area today. Some, like the ibex and rhinoceros, are known only in other climates. Still others seem almost too fantastic to have existed — yet all are here, coinhabiting the darkness of the ancient grotto.

The camera records the anomalies of this ancient art — the odd conventions of distance and perspective, the shaping of chance stone-formations into horse or bison, and finally the curious images of odd design which surround the animal figures. To this last mystery, the narrator suggests the formula familiar in contemporary societies where voodoo rites are still held — trace the image of the quarry on the wall, then kill the image; thus will the success of the hunt be assured. We are now made aware of the image of the sorcerer — and of the countless arrow-like markings showering upon the animal figures. The odd angular shapes are traps to ensnare the running prey. This failing, there is a cliff over which they may be driven — and a feast awaiting on the rocks below. Some riddles are left unsolved — Is there an ancient myth behind the figure of a pony jumping over a red sun? Is the image of a man beneath

the hooves of a running bison the record of the price paid by the hunter? The secret lies with the bones of the man who traced his hand on the wall there in the ancient grotto.

### Appraisal

The experience which this film presents is a blend of the art of the movie-maker and of the painter. The story is told with little need of help from the sound track, which is low-key and somewhat hypnotic (the sound quality of the print reviewed was unfortunately poor). Variations in camera movement and pacing, lighting, and optical effects combine to keep the film a fascinating treat to the eye throughout — despite its motionless subject-matter — from the grandeur of the cavern to the violence of the imagined chase. It should be interesting fare to students of art and man, whatever their ages.

— James W. Armstrong, Jr.

## Pictures Teach at Penfield

(Local Eastman Kodak Audio-Visual Dealer or Eastman Kodak Co., 400 Plymouth Avenue, N., Rochester, New York) Produced by Eastman Kodak Co., 17 minutes, 16mm, sound, color, 1958. Rental free. For purchase information apply to Eastman Kodak.

### Description

With James Meagher, instructional materials coordinator at Penfield School, New York, as narrator and guide, the film shows through the case-study technique how the audiovisual program in the Penfield Schools helps boys and girls learn. It documents with sound photography educational practices in the utilization, distribution, and local preparation of audiovisual materials.

The film opens with a scene showing a school bus discharging two Penfield School passengers — David and his sister — at their home. In the kitchen they are greeted by their mother who gives them an after-school snack, discusses their day at school, and mentions their before-supper responsibilities.

Later at the supper table, the whole family discusses school activities. Be-

ore leaving the table, David mentions a film on desert lands which they have been studying. They all agree motion pictures help people understand ideas. As David leaves, Dad reminisces about his school days when he studied geography without the help of motion pictures. A flashback shows how the printed page failed to hold his attention and he found the pigtailed of the girl in front of him much more intriguing.

A cut to a classroom at Penfield School shows the teacher preparing the class to see the motion picture "Life in the Desert." Among points to be observed she mentions "camel caravans" and "artesian well divers." David is the operator, other students manage the blinds and lights. When all is ready, the film is shown. The off-stage voice explains some of the more important learning advantages of motion pictures.

The action in the film shifts from the classroom to the audiovisual office where James Meagher, the audiovisual coordinator, introduces himself and explains some of the services and operational procedures of his department. David also explains some of the operations as he prepares Billy, another student assistant, to take his first motion picture projection assignment. David accompanies Billy to the classroom which they project the motion picture on bees.

Time elapses and, a year later, David is in junior high school. Here he is interested in taking pictures. Some of his pictures are snapshots for the yearbook. Others are slides of rocks and of a science experiment for use in class instruction. Slides of an "Atoms for Peace" exhibit and vacation trips are also among many in the school audiovisual collection and are used over and over again for teaching purposes.

A return to David's family shows David urging them not to be late to the PTA meeting because his pictures will be first. As his parents assure him that they will be on time because they are interested in his work and proud of his accomplishments, the film points out that homes make schools what they are.

#### Appraisal

On the basis of several actual uses of this film with professional groups interested in the educational values of the audiovisual program, the evaluating committee highly recommends it as useful for showing (1) the values of an audiovisual program both to students in classes and to the student assistants, (2) the scope and operation of a representative audiovisual program, and (3) the interrelationships and responsibilities of faculty, students,

and community as they develop the best possible kind of learning environment and experiences for boys and girls. Such learning factors as motivation, interest, reward, doing (self-activity), need, and cooperation are realistically depicted. Only in a very few instances do the actors and action fail to appear spontaneous. The Penfield School System, its audiovisual coordinator, and the producers of the film are to be commended for this contribution to education.

### Learning About Flowers

(Encyclopaedia Britannica Films, Wilmette, Illinois) 10 minutes, 16mm, sound, color or black and white, 1958. \$120 or \$60. Teacher's guide available.

#### Description

This film makes frequent use of

time-lapse photography to show the opening of the flower buds on some of the more common, cultivated and wild plants and tells of the importance of flowers to the plants and to man.

Opening scenes present static shots of blue, red, and white morning glories, then, by time-lapse photography, show in a few seconds the opening of a morning glory flower bud—a process that would normally take about two hours.

The film then shows "by moving picture magic" the unfolding flowers of the common field weed, goat's beard. The narrator tells that this unfolding normally takes only fifteen minutes so "why don't you try watching one some day?" Time-lapse photography then pictures the opening of a tulip flower and the opening of the many tiny flowers that are in clusters on the

pussy willow.

"Trees have flowers too," continues the narrator as the visuals show by time-lapse photography the unfolding of apple blossoms as they emerge from their buds. First, the bud scales are the most conspicuous, then the leaves appear and finally, a few days later, the flowers burst forth. Thus, it is evident that both flowers and leaves come from some buds.

Next, by time-lapse photography, the film shows the unfolding of the bud scales and the flowers of the flowering dogwood. The narrator explains that the flowers are clustered in the center of the four white scales which are often mistakenly thought to be flower petals.

The film continues by showing that flowers in addition to being pretty are also a source of food for some insects but, more importantly, they produce the seeds which are essential for the reproduction of most plants.

Next, time-lapse photography shows a bean pod emerging from the flower and shows that within the pod there are seeds. It shows the bean seeds being planted and by time-lapse pictures the young bean plant pushing through the soil.

The next sequence depicts a pumpkin in various stages of growth and pictures a mature pumpkin being cut open revealing many seeds. Further examples include showing that apples come from apple blossoms, dandelions produce seeds which are easily scattered by the wind and even the grasses have tiny flowers which produce seeds.

By time-lapse photography, the film shows the growth of a hepatica flower and also the withering of flowers that are picked.

The conclusion reveals that flowers left on the plant will not only continue to look pretty but many of them will make fruits and seeds which may be gathered and eaten.

### Appraisal

This film by the use of time-lapse photography and other techniques does an excellent job of enlivening and clarifying an important but mostly static subject. Not only does it present specific facts concerning flowers but it also creates a feeling of respect for them by pointing out their importance to the plant and to man. In this film, the viewer sees phenomena which would be difficult to see clearly by direct experience because such processes would need to be observed in stages over a long period of time. Thus, in a matter of seconds, the flowers are seen bursting forth from the buds, the bean pod is clearly seen emerging from the flower. Nevertheless, the narrator encourages the viewer to observe for himself as many of these things as he can. Even though in most cases, the film

indicates the approximate time the process observed by time-lapse photography in the film would take in nature it is suggested that the teacher before showing the film clarify the relationship between actual time and screen time. The personalized narration and the technical excellence contribute much to the film's effectiveness. For example, the narrator suggests without being too obvious or authoritarian that it is better to leave the flowers in the field than to pick them. This film will probably be most useful on the primary and intermediate grade levels.

— George Vukobratovic

## Trees: How We Identify Them

(Coronet Instructional Films, Coronet Building, Chicago, Illinois) 11 minutes, 16mm, sound, color or black and white, 1958. \$100 or \$55. Teacher's guide available.

### Description

*Trees: How We Identify Them* shows Marge and Kenny as they learn to look for certain clues when identifying trees — location, shape, bark, and leaves. That a tree can be identified by one or more of its features — shape, bark, leaves, or fruit — and that a good starting point for identification is to find out what kinds of trees commonly grow in the viewer's part of the country are the introductory ideas.

The film then locates on an outline map various sections of the country and by overprinted labels shows the trees that are indigenous to these sections. In the north, central, and eastern forests the common native trees are fir, pine, spruce, maple, and birch. In the south, other trees are common — oak, cypress, cedar, gum, and magnolia. In the west the common native trees are pine, spruce, cedar, fir, and giant redwood.

The film continues by showing that in the winter it is easy to see the shape of most trees and shows as examples the American elm, the rounder shaped beech, and the long, narrow shape of the Lombardy poplar. Next, it explains that the bark of many trees has unique characteristics and can be used for identification. It pictures the mottled bark of the sycamore, the furrowed bark of the oak, the smooth, white bark of the birch, and the unusual bark of the shagbark hickory.

Continuing, the film tells of the difference between deciduous and evergreen trees. It explains that most evergreens have needle shaped leaves; however, some that do not, such as the live oak, are also "evergreen." Blue spruce trees are shown to have large cones and square needles with sharp

points; the balsam fir—flat, blunt needles that seem to grow upward; and the pines—needles that grow in bundles or clusters.

It is also possible to identify deciduous trees in the winter by examining the buds. The film shows Marge and Kenny examining the opposite buds of a maple and dogwood and the alternate buds of an oak and beech. They put a few twigs in a vase of water in the house and after the leaves emerge from the buds, they identify them as being beech leaves.

The film then shows that some leaves are compound, such as those of the horse chestnut, and some leaves are simple, such as those of an elm. Also, the edges of the leaves differ, for example, the edge of the magnolia leaf is smooth, that of the holly leaf has sharp points and the tulip leaf is odd shaped.

The fruits of a tree may also aid in its identification. The film pictures the prickly balls of the sycamore, the acorns of an oak, and the green nuts of the walnut.

As a final idea Marge and Kenny are shown making a permanent leaf record by pressing leaves on carbon paper with a hot iron, then pressing the leaves on a sheet of white paper. The summary reviews the key ideas.

#### Appraisal

The evaluation committee felt that this film would be the most useful in helping to introduce a unit on trees and their identification. The teacher could follow the showing with direct experiences and numerous vicarious ones. Since the film presents many specific facts as well as broader concepts, the teacher should probably plan to show the film several times. Its presentation of interesting yet simple activities, such as the making of a leaf print, will help to encourage the child to learn more about trees. Teachers of intermediate and junior-high classes will probably find this film most useful; however, many of the facts and concepts presented are also taught in senior-high biology classes.

—George Vuke

### Spotty the Fawn in Winter

(Coronet Instructional Films, Coronet Building, Chicago 1, Illinois) 11 minutes, 16mm, sound, color or black and white, 1958. \$100 or \$55. Teacher's guide available.

#### Description

*Spotty the Fawn in Winter* tells the story of a young deer who makes friends with a little girl living on the edge of the forest and receives food from her during the cold winter

months as a reward for his courage.

The film opens with scenes of a mountain lake in autumn, trees with brightly colored leaves, and a mountain brook with leaves floating lazily upon it. "Spotty" is nibbling grass near his mother. He is growing up and sometimes explores the forest alone.

As later autumn comes, more leaves fall. Spotty is growing larger and is losing his spots. Some of his friends are the rabbit, the beaver, the chipmunk, and the birds. He is somewhat unsure of the little girl in the log cabin, however. She feeds the birds from the suspended feeder and also feeds the chipmunks and squirrels. These animals are not afraid of the little girl, but Spotty is still fearful of going near her.

One morning Spotty awakens to find snow all over the ground. Mother doesn't seem to mind but snow is new to Spotty. Everything looks changed. The branches of the evergreen trees are heavy with snow. Like other animals Spotty goes out to look for food, but finds all the grass and leaves covered with snow. Soon he finds himself following the path to the little girl's cabin. He watches her put out food for the birds. She sees Spotty and brings out a wooden box in which she puts some bread and corn meal. Knowing Spotty might be afraid, she hides behind the corner of the cabin to watch Spotty. He cautiously draws near, takes a little food, then bounds away.

Now the winter is becoming more severe. There is a cold wind blowing and a heavy snow falling. Spotty is snuggled by a tree, sheltered from the snow. He is not cold because of his thick hide and fur. The snow and

wind eventually stop, and Spotty again looks for something to eat. Even evergreen twigs are eaten by a hungry deer. He finds his way toward the little girl's cabin, and she is there feeding the birds. She holds out a piece of bread and calls to Spotty. Spotty slowly comes to her and eats the bread out of her hand. Not only has Spotty something to eat, but he also has a new friend.

#### Appraisal

*Spotty the Fawn in Winter*, a companion film to *Spotty: Story of a Fawn*, accomplishes adequately the purposes of showing physical changes in a young deer, illustrating seasonal changes in the mountain forest, pointing out the winter food problem of forest animals, and showing kindness to animals. The film is designed for children in the primary grades. The telescopic shots of this deer and some smaller animals are commendable. The rate of development is satisfactory for the primary-age level, and the continuity of the film is excellent. The narration runs appropriately with each scene and is intended for the upper-primary vocabulary.

The attempt at audience participation is achieved by using the little girl in a simple, undramatic role into which any child of that age could easily place himself. The previewing committee feels that this film left with them a wholesome, pleasant feeling and they feel that primary-grade children will enjoy seeing it as well as learning about the life of a fawn during the winter months and how a little girl befriends wild animals and birds during the winter.

## Each Room an AV Room

(Continued from page 127)

# AUDIO

by Max U. Bildersee

needed for the new school is difficult to determine in advance. However, the goal to be achieved can be stated: *To make all kinds of equipment immediately available to each teacher.*"

As the target date for opening the school in September 1959 came closer, decisions had to be made about how much audiovisual equipment. It was decided to provide "minimum essentials" but this was difficult to estimate because it is not known precisely what impact this kind of audiovisual classroom facility will have upon teaching methods and procedures. Two fundamental assumptions, based upon research evidence, had been made. It was believed that "teachers want to use audiovisual materials in their teaching." It was also believed that "there is a close relationship between the building facilities provided for using audiovisual materials and the extent the teachers can and will use them."

The initial provision of "minimum essential" audiovisual equipment will be more than three times that which has been provided for any other Rochester high school. In round numbers this means, for instance, fifteen sound motion picture projectors, twenty overhead projectors, twenty tape recorders, etc. But this is only a conservative estimate of the amount of equipment that eventually will be needed and used in East High School. Plans are being made to provide additional audiovisual resources as needed to achieve the goal of providing every teacher with the tools he needs.

There is more to be told about the audiovisual facilities of Rochester's East High School and it is planned that this will be done in two additional articles. The next one will tell more about the small auditorium or "Forum Room" with its integrated radio and television workshop studies. It is at this point in the school where the control center is located for all of the radio and television facilities that serve the whole school.

"Speed" and "Speed-up" are keynoting the changing educational scene today. "Learn more" and "Learn it sooner" are dynamic factors in course of study revision, curriculum development and instructional materials preparation nationally as well as locally.

The accomplishments of today's high school graduate are far greater than those of his parents. The academic school of today teaches, and properly so, courses which were reserved for the college student a generation ago. Not by selection from above, but by expressed individual option in the democratic tradition, we are preparing scholars for study, scientists for research and we are developing through our schools not only opportunities for advanced study but also terminal vocational facilities unknown to any previous generation of students.

Educational progress is continually more closely relating schools and school work to the needs of the individual as well as to the local and national communities. There are many reasons for this but basically it is not "Sputnik" but rather the sincere desire of each of us to give the next generation greater opportunities than we knew.

"Speed-up" is affecting all instructional levels. "Speed-up" is changing the shape of the classroom and the nature of instruction. "Speed-up" does not change the nature of learning but rather finds new ways to encourage more rapid advancement for all—and particularly for the exceptional child.

"Speed-up" is attacking the elementary school and perhaps most widespread is the clamor for foreign language instruction in the primary and intermediate grades. "Is this good?" is a question which cannot be answered. We are told that bi-lingualism is traditional in many European countries in the school program. Our solid English-speaking nation and neighbor to the north have insulated us from this type of thinking. And, a generation ago, when information transmission with the speed of light was still a novelty, such insulation was adequate to protect the school child.

But today we must think in terms of at least mastery of English and solid acquaintanceship with one or more other languages. And this instruction will begin in the elementary school someday.

Even when can be determined. Faint rumblings of this development are seen today in national, state and local reports of increased foreign language interest. Parent-Teacher Association local groups undertake studies and from their findings new avenues of study are offered. The State Education Departments, too, show this growing trend and the U. S. Office of Education sees fit to publish special reports on the employment of language laboratory facilities in instruction.

Are elementary school personnel "dragging their heels?" Emphatically, no! They are working to determine what teacher training is required for successful elementary school instruction in another language. Rather than saying "we can't" or "we won't" they are experimenting. And the simple and frequently informal investigations today indicate one major need—*adequate materials.*

This is a challenge of tremendous proportion to the audiovisual field. Particularly, this is a challenge to audio oriented instructional materials personnel everywhere.

The child we would teach has not yet mastered English. Grammar is comparatively unknown to the child except that some can "hear" the errors in their own verbal communication. Obviously the traditional introduction to language study through the grammar is out of the question. The child can only study the language as a communications medium—as he studies his own.

The child has learned his own language through sound—and can learn another. He has learned speech through imitation, unashamed mimicking, and so can learn another. There is good reason for the ability of the alien child to adapt himself more successfully to a new linguistic environment than can his parents. The success which the child can know can be turned to good account in instruction.

**ANIMATION** produced in Japan from your storyboards. US quality. Low Japanese rates. Send us a trial order.

INTERLINGUAL INTERNATIONAL INC.  
Harada Bldg., 2-1 Hirakawacho,  
Chiyoda-ku, Tokyo

The lack is adequate teaching materials. It is pointless to begin foreign language instruction in the third or fourth grade if that instruction is to be interrupted at the sixth grade, and begun again in the ninth as though there had been no previous instruction. It is equally pointless to wait to begin foreign language instruction until speech habits are set and set firmly if adequate materials are available in the lower grades.

Audiovisual materials producers are challenged with the superable task of planning, producing and distributing these instructional materials. These will comprise the gamut of audiovisual materials but, because the emphasis must be placed on the communication of ideas via speech, the greatest challenge faces recordings producers.

One change will be in the philosophy of production. Audiovisual materials suppliers have been in the habit of thinking almost exclusively in terms of "enriching" and "supplementing" instruction and hardly ever in terms of supplying basic instructional materials. But in this area we cannot "enrich" and "supplement" that which does not exist and which cannot exist for reasons of communications difficulty. No, the fundamental medium of language instruction is audio and the fundamental materials form is the record, because the record is most flexible from the instructional application standpoint. The recording, however, no more stands alone than does the picture or other visual stimulus. Multiple stimulation through audiovisual media can be the basis for foreign language instruction at all school levels providing we are prepared to fill the existing void—the void of suitable material designed for continuous study for a six or eight year foreign language instruction program to begin in the elementary school and to continue into and perhaps through the high school without interruption.

Such does not exist today . . . but will be in the hands of teachers soon, we hope.

**PINOCCHIO** is a favorite with children. Carlo Collodi's creation has intrigued children and adults alike since it was published almost eighty years ago. There are two simple adaptations available on records and one complete presentation.

*Disneyland* offers an adaptation of Pinocchio (Disneyland ST 3095) taken from the sound track of the motion picture. In this adaptation Jimminy Cricket plays the part of the puppet's conscience and narrates the developing plot. This light but interesting treat-

ment of the classic story is replete with music and other Disney-ish additions. The recording generally follows the main plot line through to the reunion of the puppet with Gepetto. This is an entertaining presentation and may be used in a variety of informal situations in schools and libraries, but it is primarily intended for entertainment at home.

Similarly light in treatment, and similarly primarily intended for home listening, is the *Columbia* recording of Pinocchio (Columbia CL 1055). This, too, is a musical adaptation taken from a telecast. Mickey Rooney plays the title role and the featured players include Fran Allison, Jerry Colonna, Stubby Kaye, Martyn Green and Gor-

don Clark.

The complete story of Pinocchio cannot be presented in the original form, except as a continuing story. It is too long for one "listening period" for children just as it is too long for them to read at one sitting. But *Libraphone* offers a complete reading by Ian Martin. Libraries can use this recording for story hour presentations as can teachers.

The complete reading is the most satisfactory presentation for instructional purposes. Whereas the Disneyland and Columbia presentations are presented on two faces of a single 33.3 rpm disc the Libraphone presentation occupies six faces on three 16.7 rpm discs.

We'll give you nine reasons  
for buying Audiotape:

1. Excellent response at high and low frequencies.
2. Exceptionally low background noise, through better dispersion of finer oxide particles.
3. Increased output and reduced distortion because the oxides are magnetically oriented.
4. Unequaled uniformity of output—guaranteed not to exceed  $\pm 1/4$  db within a reel.
5. Continuous monitoring in production for output, uniformity and freedom from distortion.
6. No oxide rub-off because an improved drier-type formula prevents it, even on dirty heads.
7. The C-slot reel—fastest-threading reel ever developed.
8. Smooth, quiet tape travel—even under hot, humid conditions—because of a special moisture-repellent binder.
9. Exceptionally low surface friction—reduces wear on heads.

For even more reasons—see your Audiotape dealer today

Charles Lampkin offers an exceptionally artistic performance reading poems on **SINGERS IN THE DUSK** (*National Council of Teachers of English*, XTV 25689/90). This superior recording offers much to secondary school English instruction and can be made to serve a variety of sound purposes. Hearing it can motivate creative writing and can develop audio understanding and appreciation. The poets represented are James Weldon Johnson, Paul Laurence Dunbar, Frank Marshall Davis, Herbert Clark Johnson, Countee Cullen, Arna Bon-temps, Langston Hughes and Donald Jeffrey Hayes.

The poems read include "The Creation," "Dawn," "Life," "Theology," "Ere Sleep Comes Down to Soothe the Weary Eyes," "Tenement Room—Chicago," "A Boy's Need," "The Wise," "Nocturne at Bethesda," "The Glory of the Day Was in Her Face," "The Negro Speaks of Rivers," "Mother to Son," "Ballad of the Man Who's Gone" and "Benediction." School and public libraries can find profit in using this recording with other anthologies of similar poetry in special programs. Further, these may represent a challenge to good sound system utilization in a variety of listening situations. Such material as this does not require the formal classroom scene, but can serve a variety of educationally valid ends.

Charles Lampkin brings a variety of experience and learning to this recording. Born in Montgomery, Alabama, Mr. Lampkin studied at the John Carroll University, the Cleveland Institute of Music and the Juilliard Graduate School. In addition to extensive experience as a public school teacher, Mr. Lampkin is known as an actor

and as a platform lecturer on Negro folklore and music.

☆

How delightful are the memories of childhood conjured up through reliving earlier experiences. **ALICE IN WONDERLAND** and **THROUGH THE LOOKING GLASS** are treasured memories to most adults, exciting experiences to most children. Here is the free play of imagination designed to charm—and succeeding so well that each generation pleasures in introducing Alice to the next.

These two titles have been superbly recorded by *Caedmon* (Alice in Wonderland: TC 1097 and Through the Looking Glass: TC 1098) in a manner which will delight young and old alike.

These recordings feature excellent performances by Joan Greenwood, as Alice; and Stanley Holloway as the narrator. Miss Greenwood brings to the recordings an exceptional theatrical career involving performances in Shakespearean roles at the Old Vic and as a comedienne playing opposite Alec Guinness in a variety of film roles. Mr. Holloway offers a similarly varied acting career and brings exceptional talents to the recordings. Miss Greenwood and Mr. Holloway are supported by such talented performers as Peter Bryant, Patricia Somerset, Billie Hill, Timothy Bateson, John Hollis, Rosamund Greenwood and others.

Children and adults alike will enjoy these listening experiences. The recordings can be used in elementary classrooms to motivate reading, and to present the stories in this audio form. Similarly, libraries can add these recordings without fear to shelf and loan collections.

## Locating Projection Screens

Would you be unorthodox enough to put one in a window, or in the corner of a room? We put one in a window and we like it fine. Here's how it happened:

The photo shows it mounted and down. When up it is hardly noticed. Set well back into the casement window, it acts as a black-out for that window and admits a pleasant and useful halo of light at the top and sides.

In this room there was no other location for it. It had to be on this side. We had no options. We could choose between a tripod or wall screen. We needed all the feet, and even inches, of throw we could get. Putting a tripod screen in front of the worship center would cut the throw by 3 or 4 feet. Use was to be frequent, and to move the table away each time was just too much bother, commotion, and work. By hanging the screen in the window we could get additional throw. It would be there to be easily and quickly pulled down when needed; or pulled down ahead of time. A bit unorthodox, we agree, but an effective and acceptable installation.

In the same unorthodox spirit the screen placement problem was solved for a square preview room at the Audio-Visual Center of Syracuse University. They placed it in one corner,

mounting it on neat brackets on the converging walls. It was out of the way, acceptable in appearance, always ready, maximized throw, and put all the floor space, except the extreme front, within the angles of good viewing.

In like manner a dentist friend of mine mounted a wall screen over the door between his living room and den, and on the den side. Now he just pulls the screen down to show his beautiful slides to his friends, and when not in use the screen is out of the way, out of sight, and handy for the next use. A little ingenuity pays off with screen placement.—WSH

## Our Tiny Tots See A Motion Picture

Every now and then I like to test a film with an audience before writing the review. It helps to keep my evaluations from becoming too subjective. No doubt many of my readers wish I would do more of it. Here is an instance I will tell you about.

I have just come from presenting the sound and color film, *Frances and Her Rabbit*, to our church week-day nursery school of 97 children and staff of six trained and experienced teachers.

Neither room used by the three age-sections of this school being large enough and suitable for this preview, all the children were brought into another room. It was set up so that each section would have its own group of chairs. While the chairs were over-size for these children, the room was entirely ready when the children were brought in.

The three-year olds sat in the middle, directly in front of a wide-angle screen; the four-year olds on the left and the five-year olds on the right. An aisle separated the sections. Since the film had a running time of only 11 minutes we hoped they could endure the chairs that long. It was the best we could do, so we went ahead.

Our purpose was to see if this film, made for kindergarten and primary grades, would interest these children. Our secondary objective was to entertain them. We did not aim for teach-

ing outcomes at all.

I gave the children a very brief "introduction" to the film. I named the pet and Frances. I told them what would happen. Of course they wanted to talk, but we got on with the film—carrying on a conversation with 90-some children was not our intention!

What happened? By and large the middle group lost interest soon after the rabbit finished drying his ears. (He got them wet when he went out in the rain.) They looked at the projector, at the other children, at each other and talked a little. A few were held by the screen.

Over in the four-year old section attention was better. They laughed when the rabbit dried his ears, and vocalized their reactions from time to time. Several lost interest after a few minutes, when Frances began drawing her picture. From outward indications I would say that their attention was never more than 60 percent.

Obviously the five-year olds were attending more and enjoying the film more. Very few lost interest. They sat forward in their chairs. They laughed; they smiled; they showed their enjoyment. After 8 minutes their attention flagged a bit, as the picture making seemed to come to a stall. It picked up at the end where Frances and Hopper went out to play, the rain being over.

What did we learn? First, that it is a great bother to bring children into an "audio-visual room." We would not have undertaken it at all if we had not wanted to test out the film on the three age-groups under the same conditions of projection. (We use some filmstrips in our program, always in the regular room.)

Secondly, we certainly learned that this film was not for the younger children. It did interest the older section. Thus, we are in agreement with the producer when he says it is for kindergarten.

Thirdly, we are pretty sure that there was some mental fall-out from this film, but we don't know what. Perhaps on Friday, when the children return, some evidence of this will be seen in their conversation and especially when they get to the "art" part of the morning's program. Will they

recall Frances and Hopper, her white rabbit?

Another way to find out if this film made any traction with the children would be to phone the homes Wednesday afternoon and talk with the mothers. It would be interesting, too, to see how fast this film-experience recedes to the periphery of the child's mind. What will be the sticking power of the images and ideas of this film in these little minds? But, this is "research" beyond our intent and competency.

While we were not checking this film for its instructional values, we believe that it has a high potential in this direction. Obviously, it can be easily used to give pleasure (entertainment) and to expand experience. No doubt at our next Staff Meeting the teachers will bring up these considerations.

In conclusion, from what I have seen of this film, I am in full agreement with the distributor (International Film Bureau, 57 East Jackson Blvd., Chicago 4, Ill.) when he says that "*Francis and Her Rabbit* will leave children with a lot to talk about." It certainly will motivate children to talk about their pets, and it certainly can be used by teachers in both church and school to accomplish many important outcomes, which they will have no trouble at all in setting for themselves once they have previewed this charming and technically excellent film.—WSH

## Opaque Projectors

Mrs. S. J. Bradley of Florence, Ken-

tucky, observes in a letter that she has "never seen opaque projectors recommended for church use," and adds that "there seems to be no limit to the availability of really good pictures." In closing she asks, "Is there some reason why they are not satisfactory?"

Reducing a ten-page reply to several paragraphs, Mrs. Bradley, we might put the whole matter this way.

There is a great volume of usable material. The trouble is that too few people see the potential of the material all around them. One teacher will, and while she teaches the projector will get a lot of use. Her successor, not envisioning the possibilities of her own hand-made and hand-prepared materials, will let the project stand idle. Thus, a costly piece of equipment must wait it out until another person comes along who is enthusiastic about this type of material.

Again, some people have jumped off without noting how deep the water was! They found that usable material was a little more scarce than they imagined. This hurt. They found, too, that for best results a pretty dark room was needed. That was often hard to get. In like manner a good screen was needed for best results. This slowed the popularity of the opaque projector.

Very little ready-made material came along for the opaque projector. Materials to supplement missionary and stewardship education came in film-strip and film form. Curriculum enrichment material came in these media, also. Thus, those who produced ready-made materials for the use of the church by-passed the opaque projector.

This has had its effect on its popularity in the churches.

You must think your situation through; you must reach your own decision. It is best to estimate the potential of any media in relation to your basic need, to your teaching staff and its interests and its attitudes, to the other equipment in use (or not in use) in your church. This study and decision could well be that of a small group of interested people. It would be better still for this study to be made by an officially appointed committee. Then the decision would have status. It would hinge less upon the enthusiasm of one person for a given type of visual aid, and strike a better balance among all the fine media available to the churches today.

You say you "use a filmstrip projector" in your little church. This is fine. Keep right on doing so. Your inference that the opaque projector might take the place of filmstrips and film is not quite sound. If you follow that line of reasoning you will be in trouble. One visual aid does not substitute for another. They supplement each other. Variety is needed in the church's program. Without filmstrips and films your visual aids program won't have much scope and variety.

You speak of the expense of filmstrips. Look at it this way: If you buy a filmstrip for \$10.00 and use it just ten times in five years, and only 100 people see it in those five years—What is the cost per person seeing it? Is ten cents too much to afford? Can we ever take cost figures seriously when we are sharing the Gospel and its meaning with children and young people? What money value would you put on the insights, ideas, and convictions which the church and its teachers shared with you when you were a child and a youth?

In closing, let me go back to another basic consideration: Some teachers can use opaque materials creatively; others just show them. The catch comes in putting them together so they have educational impact. By and large a lot of time and planning, and downright educational understanding, is going into the filmstrips and films which are being made for church use. This tends to make their use easier as well as more effective in the hands of the average teacher.

Blessings on your work and I hope this will be of some help to you.—WSH

## Exceptional Art Film

*Rembrandt: Painter Of Men* is an exceptional film in three ways: in content treatment, in technical qualities, and in its psychological impact. Hav-

tested  
**VISUAL aids**

for better teaching

Let your pupils see what you say. They'll learn faster—remember longer. Scripture Press offers a complete selection of tested visual aids for more effective teaching.

ing seen it twice in B&W and three times in color, this reviewer is more than convinced of its general excellence. Having invited in a few friends for a preview, he observed its impact on them—as he himself experienced it.

Produced in commemoration of the 350th anniversary of Rembrandt's birth, this film passes before us sixty selected original Rembrandt canvases from twenty-nine museums located in twelve countries. Who sets this feast before us? Bert Haanstra, who was commissioned by the Netherlands' Government Information Service to produce this informative, beautiful, and moving film.

As the camera brings these great paintings before us the commentary (effectively narrated) adds its insights and guides our thinking. Having left many self-portraits, the producer has with consummate skill used them to bring the man Rembrandt as well as the artist before us. In a sentence or two his life and work is summarized as, with great optical finesse, these self-portraits fade one into the other as the years of his life went by. With such a beautiful ending, you can only say, when you have regained your objectivity: "What a wonderful experience!" And so it was with this reviewer. To see this film is to have an experience, and no greater tribute can be paid to a motion picture.

Who makes this fine film available to the American public? Coronet Instructional Films, Inc., Coronet Building, Chicago 1, Ill. The running time is 18 1/2 minutes; you will think it twenty eight! The color version, of course, is more than worth the extra rental cost. Very highly recommended. —WSH

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50. With guide, \$7.80.

**Richard III** — Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50. With guide, \$7.80.

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50

**Alexander the Great** — Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50. With guide, \$7.80.

**A Lesson in Mythology** — Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50.

**The Vikings** — In full color, 47 frames, based on the Kirk Douglas production. \$7.50. With guide, \$7.80.

**Julius Caesar**, set at 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$6.00. With guide, \$6.30.

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**Adventures of Robinson Crusoe** — In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50. With guide, \$7.80.

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$3.50.

**Hansel and Gretel** — In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50. With guide, \$7.80.

**Greatest Show on Earth** — In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50. With guide, \$7.80.

**Ulysses** — In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50. With guide, \$7.80.

**EDUCATIONAL & RECREATIONAL GUIDES, Inc.**

# New Equipment and Materials

For addresses of the sources supplying information on which these listings are based, refer to **Directory of Listed Sources**, page 157. For more information about any of the equipment announced here, use the **Readers' Service Coupon** on page 155.

## NEW EQUIPMENT

### CAMERAS, Still

**Single-lens Reflex Camera.** Japanese-made "Topcon" features 58mm f:1.8 lens; split-image eye-level 1:1 viewfinder; 1-1/1000th focal plane shutter; single stroke rewind lever; folding rewind crank; with lens \$295; camera body (interchangeable bayonet lens mount) \$195; carrying case \$15.50. BESELER.

For more information circle 101 on coupon

### CAMERAS, Accessories

**Copying Stand.** The "Rowi" can be dismantled to take very little space, yet is solid enough for copy up to 8 1/2 x 13 on cameras 35mm to 4x5. Precision adjustment for framing and focus. Versatile, from microscopy to wall photos. \$34.50; illuminator \$19.85. B&J.

For more information circle 102 on coupon

**"Exporite" Meter for Polaroid.** A low-priced meter fitting the Polaroid accessory clip reads directly 0-20 in new EVS numbers, and ASA 70 to 1000 speeds. \$6.95; case \$1. PIDC.

For more information circle 103 on coupon

**Kino-Titler.** Includes height-adjustable auxiliary closeup lens attached to cast camera base; 12" spacing rod; easel for holding 5 1/2 x 4 1/4" title cards. For 16mm and 8mm titling, including animated titles. \$6.95. PIDC.

For more information circle 104 on coupon

**Mecablitz Transistor Flashguns.** BURBR Dual transistors reportedly assure constant light output and flash factor during extended lifetime of the batteries. Model 101, using 4 batteries, \$54.95; Model 200, using 6 batteries, \$69.95.

For more information circle 105 on coupon

**Stereo-Microscopic Camera.** A 35mm Graflex Stereocamera with special prism compensating system for use with AO Cycloptic Stereoscopic Microscope. Adapter attaches to microscope stand and permits camera to be swung into position over the eyepieces, to take a 3-D record of exactly what the eye has seen. AMERICAN OPTICAL.

For more information circle 106 on coupon

**Strip Printer for 35mm Negatives and Transparencies.** Has built-in printing lamp and safe light, permits 1 to 4 sec. exposure control. — useful in duplicating schoolmade filmstrips; microfilms. \$49.50. B&J.

For more information circle 107 on coupon

**Three-faced Flash Shield.** Fits over most flash guns; one face polarizes, another compensates for use of daylight film with clear flash bulbs; the third is clear, guards against shattering bulbs. \$3.75 to \$5.50. TIFFEN.

For more information circle 108 on coupon

**Twin-Lens Closeups.** Adapter for reflex cameras with bayonet mount; lens coupled with prism that compensates for parallax between viewing and taking lenses. Field down to 7 to 10". \$7.95. PIDC.

For more information circle 109 on coupon

### PROJECTORS, Movie & TV

**Ediophor TV Projector.** Large screen (color 16' b&w x 32'), using Swiss color wheel system, 35' trailer houses 4 cameras, etc., 2 projectors (800 lb., 65" high, @ \$16,000); crew of 8 to operate, total cost \$336,000. CIBA.

For more information circle 110 on coupon

### PROJECTORS, Still

Rainbow "Magnajector"

**Opaque Projector Weighs 28 oz.** The plastic "Magnajector," with 60-watt lamp, is designed to project a field of up to 3 5/8 x 3 inches. \$7.95. RAINBOW.

For more information circle 111 on coupon

### PROJECTORS, Accessories

**Combination Wheeled Storage Rack.** Films, filmstrips, tapes, slides each in own compartment, on mobile cart that serves as a projector stand. SMITH.

For more information circle 112 on coupon

**80-foot Rear Projection Screen.** POLACOAT rear projection screen material is now available to order in any size from 3x4' to 40x80'. Seamless to 10', edge-welded from endless rolls in the larger sizes. \$2.50 per square foot.

For more information circle 113 on coupon

Polacoat Projection Screen

**Folding Projector Stand.** Improved model has metal top and middle tray 13x22"; metal dowels, wooden accordion-folding legs; adjusts to 22", 30", 36", and 40" height; folds to approx. 16x24x4". \$14.95. OCTO.

For more information circle 114 on coupon

**Ken-Rol-It Projector Table** features 10" rear wheels for stairway transport. 40 1/2" high; 42 lb.; steel tube frame; \$49.50. KENROL.

For more information circle 115 on coupon

**Mylar Splices Filmstrips.** Tough, thin splicing tape, either transparent or opaque (for magnetic film), 16mm single or double perforation, 35mm for filmstrips. Also splicing block. Free brochure. FLORMAN-BABB.

For more information circle 116 on coupon

**Slide Mounts.** Standard or 2 1/4 x 3 1/4. Aluminum frame, thick micro cover glasses, double fold heavy paper mask. Choice of three mask apertures. Box of 12 \$3; 50 \$12. EMDE.

For more information circle 117 on coupon

**Stereomounts.** Aluminum self-aligning mask holds cover glasses. Three types of mask—Close-up (under 7'), Medium (4 to 20'), Normal (7' to Infinity). Box of 20 \$3.50; per 100 \$16.50. For EK cardboard stereos \$32.50 and \$14.50.

For more information circle 118 on coupon

**Ultra-Violet Photomicroscopy.** B&L-RCA joint research has developed a compact U-V image converter; an electronic ultrascrope tube producing a visible image. The microscope, with U-V optics and image converter, is priced at about \$3250; the image converter unit (ultrascrope and 35mm camera), for use on existing monocular microscopes, is priced at about \$1500. B&L.

For more information circle 119 on coupon

**Wide-Angle Projection Lens.** New 1" lens produces a 9' picture on a 10' throw, on DuKane Auditorium Slide-film Unit. \$65. DUKANE.

# HELPFUL BOOKS

**THE AUDIO-VISUAL EQUIPMENT MANUAL.** By James D. Finn. Published under the general editorship of Edgar Dale. 384 pp. 1400 illustrations. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$9.50.

**AUDIO-VISUAL MATERIALS: THEIR NATURE AND USE.** Revised Edition. By Wolter Arno Wittich and Charles F. Schuller. 570 pp. 249 illustrations, 14 Color Plates. Harper & Brothers, 49 E. 33rd St., New York 16, N. Y. 1957. \$6.50.

**AUDIO-VISUAL METHODS IN TEACHING: REVISED AND ENLARGED.** By Edgar Dale. 544 pp. Illustrated; and with 49 full-color plates. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$6.25.

**EDUCATORS GUIDE TO FREE SLIDE-FILMS.** Compiled and Edited by Mary Foley Harkheimer and John W. Diffor. Tenth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$6.00.

**EDUCATORS GUIDE TO FREE TAPES, SCRIPTS, AND TRANSCRIPTIONS.** Compiled and Edited by Walter A. Wittich, Ph.D., and Gertie Hanson Halsted, M.A. Fourth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.75.

**EDUCATORS GUIDE TO FREE FILMS.** Compiled and Edited by Mary Foley Harkheimer and John W. Diffor. Educational Consultant, John Guy Fowlkes. 18th Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$7.00.

**MITCHELL'S MANUAL OF PRACTICAL PROJECTION.** 450 pp. Illustrated and cross-indexed. Covers every aspect of motion picture projection. Material presented in easily understood language — not too technical, yet technically accurate. Most complete and practical handbook for projectionists ever published. International Projectionist Pub. Co., 19 West 44 Street, New York 36, N. Y. \$6.00.

**STANDARDS OF PHOTOPLAY APPRECIATION.** A Course of Study in Photoplay Appreciation, Including a Photoplay Approach to Shakespeare. By William Lewin and Alexander Frazier. Illustrated. Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey. \$4.75.

**A WINDOW TO THE CHILD'S MIND** — Alpark's New Educational Handbook by Dorothy R. Luke, 268 pp. The first authentic analysis of Helen Parkhurst's recorded interviews with children. An indispensable guide for teachers. 1955 Storbridge Publications, P.O. Box 574 Grand Central Station, New York 17, N.Y. \$3.50.

# Trade News

President, George Sauppe (left), general manager, Emil Eisenlohr, and engineer, Fred Hueberner, accept State Department award given "in recognition of public service" rendered by 10 "Selectroslide" projectors at Brussels Fair.

## State Department Honor

The performance of ten "Selectroslide" projectors in presenting "to the world at Brussels a representative picture of our land and our people" won a special State Department citation for their makers, Spindler and Sauppe. According to Francis D. Miller, Deputy Coordinator of the J. S. Exhibit at the Brussels Fair, the machines "operated 13 hours a day, 7 days a week for 189 days," the duration of the Fair, without even once calling on the two reserve machines sent over by the manufacturer as stand-bys.

## TSI Pushes Equipment Lease

A Technical Service, Inc. subsidiary, TSI Leasing, Inc., is actively promoting the leasing of TSI projectors by film users who have temporary need for expanded equipment resources for special nation-wide drives and seasonal campaigns. If purchase is made later, rentals apply against the price, according to E. H. Lerchen, TSI president.

## F-A Includes CCTV Rights

Film Associates of California announce that all their instructional films are cleared for TV use and are authorized for closed-circuit television use by schools purchasing same, without additional fee. If such films are rented "the charge for such use is nominal."

## Roa in Roto

The Milwaukee Journal (Nov. 16) included an 8-page Sunday supplement in color rotogravure entirely devoted to advertising rental films available from the Roa Kraft Birch library. There were three pages of religious films from ten leading producers; the center spread, in color, concentrated entirely on Christmas films. Facing pages plugged top entertainment product, one stressing culturally worthy titles, the other individual photos of 30 star players and the titles of features in which they appear. Free films and an order blank filled the back page; a front cover color still of a guided missile was an eye catcher. Roa's film rental business pays — she makes it pay good service, fine products and lots of promotion.

## Schools Top Target Audience for Sponsored Films

A survey conducted by the magazine **Film Media** addressed to 1,000 film sponsors brought returns indicating that

schools and colleges ranked first in target audience, followed by industry, television, private organizations, and church and adult education groups. Public Relations ranked first in purpose served, with Sales Promotion and Education close behind, virtually tied second and third. More than half indicate an increase in film sponsorship in 1959, less than 3 per cent expect to reduce their use of the medium.

## Silver Jubilee At Scripture Press

A full year of events is planned by Scripture Press, religious publisher at Wheaton, Illinois, in celebration of its 25th anniversary. This ministry, started a quarter century ago in one room of the home of Dr. and Mrs. Victor E. Cory, has grown into an up-to-the-minute publishing plant covering 2½ acres, and serving more than 75 denominations.

## Fix Filmstrip—Free

Got a filmstrip that needs fixin'? Torn maybe, or with broken sprocket holes? Send it direct to Florman & Babb, 68 W. 45th St., New York 36. Just to show you what their thin, tough Mylar splicing tape can do, they offer to fix it for you, absolutely free.

Lawrence (Larry) Post has been appointed to the newly created post of Sales Promotion Manager of Robins Industries Corp., Flushing, N. Y.

J. J. Stefan has been appointed president of the school equipment division of Brunswick-Balke-Collender, a newly created post. He has been with the company for 20 years and was general counsel and secretary from 1944 to 1955. The division recently opened a 325,000 square foot plant and research center in Kalamazoo, Mich.

Oct. 26-30 — National Association of Educational Broadcasters, Sheraton Cadillac Hotel, Detroit, Mich.

**PORTRAIT  
OF YOUR  
STRONGEST  
LINK!**

This dedicated chap is your own private genie, the sales-service representative assigned by General to cover the processing and handling of your film. He works for us — but answers to you!

Whether it's technical data, production progress, job deadlines or prices about which you inquire, you need deal with only one person; we call him your account supervisor. His job is the linking of General's incomparable production facilities to your particular processing needs.

We're understandably proud of this unique service to our customers, and add it to an already imposing list of other outstanding "firsts," "bests," and "only-at-General-Film."

Whatever type of film you produce, be it educational, industrial, religious, governmental, etc., our background of experience is available to you; a letter or call will put us at your service.

**A NEW ERA  
IN  
PICTURE  
PROJECTION**

Magnified view of the more than a million lenses on each Radiant "lenticular" screen surface—lenses that concentrate and reflect light with greatest brilliance over widest viewing area.

the new  
**Lenticular**  
RADIANT  
SCREENS

**FOR LIGHTED AS WELL AS DARKENED ROOMS**

The revolutionary new "truly lenticular" Radiant Screens provide a reflective surface that is in effect a *complete sheet of lenses!* These lenses are optically engineered to control light completely. Actual tests have shown the exclusive Radiant "true lenticulation"—is extremely effective for projecting in darkened rooms or even lighted rooms where no extreme or unusual lighting conditions exist.

Exclusive Radiant Stretch Bar keeps surface flat and taut

Radiant "Educator" Screen Model WEDO, with Stretch Bar and Optiglow lenticular surface.

THE new *Lenticular*  
**ROLL-UP WALL SCREEN**  
with exclusive **Stretch-Bar!**

A new Radiant development now permits the use of the remarkable new lenticular screen surfaces where they were never available before. The Stretch Bar makes possible an instant flat, taut surface. When not in use, screen can be rolled up and is fully protected against dust or injury.

The Radiant "Educator" with Optiglow Lenticular Surface (Model WEDO)—produces brilliant pictures in a wide viewing area, with greater sharpness and definition. The surface is washable as well as fungus and flame-proof. Available in 2 sizes: 40" x 40" & 50" x 50".

**Also available - "Lenticular" PORTABLE TRIPOD SCREENS**

The Radiant Educator is now also available in Tripod models in choice of two lenticular surfaces—Uniglow and Optiglow—as well as Vyna-Flect Beaded to meet varying projection needs.

## April is DAVI Month!

For those of our readers unable to make the DAVI convention, April 13-16 at the Olympic Hotel in Seattle, we will present a report on the proceedings in the May issue.

Monday's program features the various occupational interest groups. President Charles F. Schuller will speak on "The New Frontiers Ahead," followed by the keynote address "Education in Orbit," by Lindley J. Stiles, Dean, School of Education, University of Wisconsin. During the afternoon the following groups will meet: college and university; county and cooperative programs; programs in individual schools; large city systems; medium-size city systems; and small city systems. In the evening, V. W. van Gogh, nephew of the great painter, will speak on "Developing One's Creative Personality." Research papers, demonstrations and discussions will conclude the activities.

Tuesday will open in the morning and will be taken up by a general session on all phases of the National Defense Education Act: Chairman, Lloyd J. Andrews, superintendent of public instruction, State of Washington; Speaker, Roy M. Hall, assistant commissioner for research, U. S. Office of Education. The afternoon will be open for visiting exhibits, formally opened on Monday.

On Wednesday the fifteenth there will be four concurrent sessions in the morning (educational television, research design, teacher education and teaching modern foreign languages) and five in the afternoon (buildings and equipment, curriculum, educational television, research design and teacher education).

Thursday, the last day of the convention, will begin with a general session presided over by Walter Bell, director of audiovisual education for the Atlanta public schools. John C. Fritz of the University of Chicago will give a talk on "Hidden Persuasion in Education—A Case Study." The rest of the morning will be devoted to the occupational interest groups mentioned on Monday's program. In the afternoon are scheduled committee meetings on archives and history, research audiovisual instructional material, buildings and equipment, educational television, equipment standards, evaluation of secondary schools, legislation professional education, radio and recordings, and teacher education.

Co-chairmen of the national program committee are Edith Davidson Lind, audiovisual director for the Seattle public schools, and Roy Wright, coordinator of the film center at the University of Washington.

## This Month's Features

The Hocking-Merchant story on language laboratories is almost an answer to the request for "hard thinking" on this subject in the November 1955 editorial. Dr. Hocking appeared in our pages once before with this topic—his story "The Power of Babel" was published in December 1951.

We do not present this article as "the last word" in language labs. Rather it is one of the "first words" specifically related to high school language labs. We hope to publish many more articles about them as more experience accumulates, and would appreciate hearing about the projects of others in this field with a view to publishing them. —E.S.

## Bell & Howell "Specialist" projects slides or filmstrips brilliantly...even in semi-daylight!

The brilliant "750 Specialist" is specifically designed for today's brighter classrooms. The unique 750-watt lamp throws more light than any comparable projector—a full 950 lumens—enough light for brilliant showings even in semi-daylight! But illumination is only part of the story:

- The housing is rugged die-cast aluminum. Unusually strong but *light*, it weighs only 9¼ lbs. without case.
- Highly versatile, it projects single and double frame filmstrips or 2 x 2 slides . . . easily converts for automatic slide projection.
- The filmstrip moves on scratch-proof ceramic tracks . . . nothing touches the picture area.
- A powerful 5" fan assures cool operation, hour after hour.

- Specially designed "smooth focus" lens gives razor sharp picture.
- A metal instruction plate is permanently mounted on projector.
- Costs only \$129.50 with "air-flow" case and slide changer. 500-watt "Specialist" multi-purpose projector, \$89.95.

### Write for private showing

Gentlemen:  
I would very much like to see how the "Specialist" performs in our classroom. Please arrange a demonstration.

FINER PRODUCTS THROUGH IMAGINATION

# With the Authors

ELTON HOCKING, French and Italian scholar, is presently the Head of the Modern Language Department at Purdue University, Lafayette, Indiana. In addition, he is an expert on teaching methods, serving as consultant to the Educational Radio and TV Center and a member of FLES TV and Film Project. He recently represented the MLA at a special conference on Title VII of the National Defense Education Act in Washington, on Title III at M.S.U., and at the A.C.E. meeting in Chicago. Dr. Hocking received his Ph.D. in 1930 from the University of Wisconsin.

ROBERT C. MERCHANT has just joined the Electronic Teaching Laboratories in Washington, D. C. as Special Projects Engineer. At the time of his co-authorship with Dr. Hocking, he was Electronics Supervisor of the Purdue Department of Modern Languages as well as president of his own company. Among his activities he lists the Institute of Radio Engineers, the Audio

Engineering Society, and Advisory Membership in NAVA.

LOU PENEGUY, Director of Coordination and Information for the Alabama Educational Television Commission, has previously taught radio and television courses at the Leland Powers School of Theatre-Radio-TV in Boston and at the National Academy of Broadcasting, Washington, D. C. He has been concerned with commercial and educational television and radio program development, programming and public relations through the East and South.

PAUL C. REED, well-known as the editor of *Educational Screen and Audio-Visual Guide*, is also Director of Instructional Materials for the Rochester, N. Y. public schools. On page 78 appears the second article on the AV facilities at Rochester's new East High School, and another in our series on "Architectural Solutions for Audiovisual Problems."

SIM WILDE is the Director of Audiovisual Education for the Asheville (North Carolina) City Schools. He has taught for eight years in the Buncombe County and Asheville City schools, and has also served as assistant principal and audiovisual coordinator. The fine work he describes in "We Send Music Lessons By Telephone" was originated by Barry Morris, presently Consultant in Audiovisual Education for the State Department of Florida.

DEPARTMENT EDITORS are: AUDIO—Max U. Bildersee, audio education consultant, state department of instruction; AV IN THE CHURCH FIELD—William S. Hockman, Director of Christian Education, First Presbyterian Church, Glens Falls, N. Y.; FILM EVALUATIONS—L. C. Larson and Carolyn Guss, both of the Audio-Visual Center, Indiana University, Bloomington; FILMSTRIPS—Irene F. Cypher, Associate Professor of Education, New York University.

## AUDIO-VISUAL INSTRUCTION

By

**JAMES W. BROWN, RICHARD B. LEWIS,**

**FRED F. HARCLEROAD**

All at San Jose State College

Ready for Fall Classes

This text on audiovisual methods provides concrete, practical information on the use of instructional materials to plan and carry out learning activities. Examples of use have been drawn from all subject fields, from kindergarten through college. It is the first audiovisual text to use an inventive and stimulating format in which profuse illustrations are correlated with the text. Emphasis throughout is on the principle that learning is most effective when materials are integrated with instruction.

**ARE YOUR WINDOWS AS MODERN AS YOUR METHODS?**

Audio-Visual teaching makes your coverings out of date unless...

**THEY MAKE ANY ROOM BLACK-OUT DARK IN SECONDS... EVEN AT NOON!**

**YET GIVE AN INFINITE RANGE OF LIGHT CONTROL!**

**AND COST LITTLE TO START WITH... LESS TO MAINTAIN!**

*Sure*, black-out coverings get the room dark. But they don't cut down on glare. *Sure*, conventional coverings control daylight. But they don't achieve an effective black-out. That's why both are as out of date as a one-room school! Only Flexalum Audio-Visual blinds can give you the precise light control you need for everyday class activities... and *also* plunge the room into absolute darkness for Audio-Visual teaching. Reasons: Flexalum is made with more slats, which means greater overlap—plus special light channels which keep light out around the sides. All this and you *save*, too. Because Flexalum also gives more years of service than any other type of window covering... *a promise we back with a five-year written guarantee*. Look into Flexalum for your school.

# Communication and the Learning Process

Excerpts from the preface of *A-F Instruction: Materials and Methods*, soon forthcoming from McGraw-Hill Co. The book is co-authored by three noteworthy leaders in the audiovisual field, all from San Jose State College in California: James W. Brown, Professor of Education and Head of the Graduate Division; Richard B. Lewis, Professor of Education and Head, Division of Audio-Visual Services; and Fred F. Harclerod, Dean of the College.

**T**HIS book was written to help prospective and practicing teachers become better acquainted with the broad range and interrelated uses of audiovisual instructional materials and techniques. Throughout the text the term "audiovisual instructional materials" is broadly interpreted to comprise the many substances and sounds which play important roles in learning. The continued preoccupation of our schools with

things verbal has tended to obscure adequate recognition of the principle that learning is most effective when generalizations and abstract concepts are developed on the basis of rich experiences with concrete realities. These are the realities of things which are heard, seen, felt, smelled, manipulated, organized, assembled, or taken apart during learning; they are the things which are ultimately named, labeled, talked about, evaluated, criticized, read about, or thought about during learning; and they are the things remembered or recalled for pleasure or for use after learning.

A major and consistent emphasis of the text is the principle that instructional materials are used not in isolation but interrelatedly. Multipurpose uses of materials are stressed: charts are useful in demonstrations; tape recordings of discussions afford opportunities for

further discussion and later analysis; field trips stimulate interest in making collections; films or film strips can provide necessary background to help students determine what is important to observe on such trips; encyclopedias, reference books, textbooks, pamphlets, and supplementary books provide essential data in organized forms which students need to solve problems growing out of still other learning activities.

Well beyond mere identification of materials or descriptions of their characteristics, advantages or disadvantages, the text discusses of each instructional material points up details, examples, and utilization suggestions to assist teachers in making practical classroom applications. Examples are drawn from all subject fields and from various school levels, kindergarten through college. In addition an entire chapter is devoted to case studies of actual teaching situations presented verbally and through picture stories. This early presentation of illustrative examples demonstrates how learning activities function and flourish through the continuing interrelationship of classroom facilities and procedures, instructional materials and equipment.

At the end of the text is virtually a self-contained manual on the efficient operation and handling of audiovisual equipment. In a series of illustrated step-by-step procedures the general features of equipment commonly found in classrooms and training centers are described, along with easy to follow directions for equipment operation and maintenance. The Reference Section also includes a glossary of terms and a classified directory of sources from which the teacher can obtain instructional materials.

It is fortunate that science and technology have provided tools and knowledge to make accelerated learning possible. The materials of learning have been improved; there are excellent mechanical and electrical devices to implement learning; and there is a vast background of tested knowledge about *how* to improve learning. The teacher today must not only have the new knowledge but know how to use the new tools for learning. This text has been designed to assist teachers in meeting the educational challenge of our times—that more children need to learn better and faster.

**FOR BETTER PRESENTATIONS**  
**OPTIVOX**  
 LIGHTWEIGHT PORTABLE EASEL

The newest thing for visual aid is this lightweight, portable **Optivox** easel. 29" x 39½" steel board finished in "rite-on" green, adaptable for chalk, charts, or magnets. Aluminum legs fold to convert from 70" floor easel to table model. Net weight, 17 lbs. Comes with eraser, crayons, chalk, pointer, and removable chalk tray. **Only \$44.95**. Carrying case and lamp fixture are extra equipment.

## PIXMOBILE PROJECTION TABLE

Save time... save storage space. Prepare your visual presentation in advance on the portable **Pixmobile**, roll it in, show it, store your equipment on it. Sponge rubber top, large enough for both movie and slide projector. Has 4" wheels, equipped with brakes that hold on incline. Vibrationless. Several models and heights. **42" table only \$32.95.**

Teach More Effectively with a

Graflex-SVE

# SCHOOL MASTER

FILMSTRIP AND  
SLIDE PROJECTOR

Filmstrip frame courtesy of Society of Visual Education, Inc., Chicago 14, Ill.

When you use a School Master, you have several distinct advantages over less fortunate teachers. Your filmstrip or slide presentations are more effective. Knowledge is more easily retained. Attention and interest are kept at a high level. A School Master gives you the most brilliant projection ever achieved in a classroom projector. Your pupils can see vividly what you are talking about. It makes teaching . . . and learning . . . so much easier!

- Most brilliant projection ever achieved in a classroom projector
- Shows filmstrips and can be quickly converted for 2" x 2" slides
- Simple threading and framing
- Powerful 4-blade fan keeps film cool
- Optical system removes as a unit for cleaning
- Handy built-in carrying handle
- 500 watt and 750 watt models
- Available, also, in remote control models

Priced from \$84.50

School Master is shown with accessory rewind take-up

## GRAFLEX AMPRO\* SUPER STYLIST 16 MM SOUND PROJECTORS

These finely engineered, precision-built projectors are the mainstay of audio-visual programs. They're built for hard, dependable usage and they have features that recommend them to the most critical. Here are a few:

- Project either sound or silent films
- Extremely easy to thread
- Triple-claw movement feeds even badly damaged film without loss of loops
- Quiet operation
- All parts easily accessible for cleaning
- All film bearing surfaces "flame-plated" to protect film
- 750 watt lamp for brilliant pictures
- Super fidelity, full-bodied sound
- All single unit projectors include speaker in carrying case

Priced, including speaker, from \$459.50

## SVE "E-Z" VIEWER

for convenient previewing of single-frame filmstrips.

- Self-contained
- 3-times enlargement
- Folding stand permits 45° viewing angle
- Positive sprocket advance
- Easy to thread
- Size: only 4½" wide, 2¾" high, 5¾" long. Weight, 24 ounces Only \$14.95

For additional information on equipment shown, write Dept. ES-49, Graflex, Inc., Rochester 3, N. Y. A subsidiary of General Precision Equipment Corporation.

# HAVE YOU HEARD?

NEWS ABOUT PEOPLE, ORGANIZATIONS, EVENTS

William F. Kruse receives Harwald's "Senior Statesman" award from Technical Director Richard Wallace.

## Harwald Holds Annual "Cracker Barrel"

On February 26-28 the Harwald Company of Evanston, Ill. held its second annual open house and informal conference on the audiovisual communication media. The second day of the "cracker barrel" was devoted to educational theories and uses of audiovisual materials.

Several talks highlighted the meeting, punctuated on occasion by spirited discussion. Bill Kruse traced the pioneering of audiovisuals in teaching and teacher training, listing also the most striking developments in mechanical inventions. Philip Lewis, Director, Bureau of Instructional Materials for the Chicago Board of Education, discussed the latest develop-

ments in educational television. Maurice Mitchell, president of Encyclopaedia Britannica Films, reported on the political complications involved in the states' use of the National Defense Education Act funds. Walt Wittich, University of Wisconsin, contributed a controversial talk on the use of automation in education.

Other contributors included Cliff Welch, U. S. Naval Training Aids Center, San Francisco; Thomas Richey, Mental Health Service, State of Illinois; John Flory, Eastman Kodak Company; Pearl Rosser, president of the Baptist Missionary Training School; Ott Coelin, editor of *Business Screen* magazine; James P. Fitzwater, Director of Visual Instruction, Chicago Public Schools; Joe Antos, Engineering Consultant, Aurora, Ill.; Dr. M. L. Miller, Director of Audio-Visual Education, Illinois State Normal University.

Climaxing the evening was the presentation of the "Senior Statesman" award to William F. Kruse, *Educational Screen & AUDIOVISUAL Guide's* trade editor, advertising representative, and public relations expert.

## CEGO'S NEW WEINBERG WATSON PROJECTOR

Coaches . . . Doctors . . . Teachers . . . All have helped us modify the 16mm Kodak Analyst II to encompass all the features required in a true time and motion study projector.

The Weinberg Watson is ideal for checking a variety of recorded data such as sports, motion study, laboratory reactions, and many other subjects where time expansion study is vital to the solution of a particular problem.

### CHECK THESE EXCLUSIVE FEATURES

Continuous variable speed from 2 to 20 frames per second. Electronic single frame advance.

Flickerless projection made possible by a revolutionary shutter design.

No light loss on single frame projection (and film will not buckle).

Remote control switch combines two operations . . . press one button for single frame operation . . . the other for instantaneous forward-reverse motion.

CAMERA EQUIPMENT CO., INC.

Dept. E 315 West 43rd St.,  
N. Y. 36, N. Y. JUDSON 6-1420

## Detroit Experiment in ETV

A Detroit educational television experiment, conducted with about 3,500 pupils in three elementary, three junior high and three senior high schools and their corresponding control groups, shows that TV teaching results in better learning. Furthermore it is claimed to reduce tardiness, absenteeism and disciplinary problems.

## Film Competition Won by U.C.L.A.

At its 1959 Awards Banquet, the Hollywood Producers' Guild awarded the Theater Arts Department of the University of California at Los Angeles the Gold Medallion in its annual inter-collegiate film competition. The winning production, "Reflections," was a ten-minute sound and color film directed by Marvin Gluck, and was based upon a Japanese parable filmed with authentic settings and costumes. This marked the fifth time a U.C.L.A. film has won the competition since it was inaugurated in 1953.

**Kodak**  
TRADE MARK

At Woodrow Wilson Jr. H. S., Wyandotte, Mich., L. D. Murphy (seated), AV Director for the Wyandotte Schools, tells how:

**“Our classrooms put conveniences teachers need at their finger tips . . . So, too, do our Kodak Pageant Projectors.”**

“Before approving plans for our building, we asked our teachers what they needed to teach most effectively. As a result, we have built display cases, file cabinets, and flat storage drawers in every classroom, and project rooms adjoining most classrooms. When it comes to showing educational films, our teachers want and get the *same* kind of finger-tip *convenience* from our

Kodak Pageant Projectors.”

Put control and convenience at the finger tips of *your* teachers with the Kodak Pageant 16mm Sound Projector. Folding reel arms and attached drive belts make the Pageant easy to set up and use. Ask any Kodak Audio-Visual Dealer for a demonstration at your school. Or get details by writing for Bulletin V3-22.

### 48 Film "Starter Set" For Grade Schools

Everything a grade school needs for the operation of its own instructional film library, including 48 one-reel sound motion pictures carefully selected to meet the most basic needs of Grades 1 to 6, can now be put into the school for full time use for as little as \$7.50 per year per film. The films were selected from the more than 800 Coronet titles to correlate directly to the units of study and the leading textbooks in the elementary field. There are 19 films in the "starter set" for grades K-3, and 29 for grades 4-6.

The offer is designed primarily to demonstrate to schools and school systems which have never enjoyed the advantage of film ownership the simplicity, economy and effectiveness of having the needed films right where the teachers can get them when they want them for repeated and multi-purpose classroom use. To this end the special "starter set" offer includes a steel storage cabinet to house and protect the films, a pair of rewinds and an excellent rugged splicer, a simple system for keeping records of use and a manual that tells how and why, 100 catalogs describing and illustrating the 48 films, and 480

Teachers' Guides (ten for each title). The administrative requirements call for nothing more than a table on which to place the cabinet and rewinds in a desirable location readily accessible to all teachers, and a competent person in charge of maintaining and distributing the films and their utilization materials.

The 19 titles for the lower grades include: "Let's Measure: Ounces, Pounds and Tons . . . Pints, Quarts and Gallons"; "Courtesy for Beginners"; "Primary Safety: On the School Playground"; and "Beginning Good Posture Habits." Included also are six language art films as background for reading and expression: "Bushy, the Squirrel"; "Hoppy, the Bunny"; "Mittens, the Kitten"; "Peppy, the Puppy"; "Mr. and Mrs. Robin's Family"; "Zoo Animals of Our Storybooks." Finally, there are eight titles in elementary science: "Autumn Is an Adventure"; "Farmyard Bahics"; "How Animals Live in Winter"; "How Machines and Tools Help Us"; "Living and Non-Living Things"; "Spring Is an Adventure"; "We Explore the Woodland"; "What Do We See in the Sky?"

The films for the intermediate grades (4-6) include two on arithmetic, five on health and safety; nine on geography; three history; and one each

on guidance and language arts.

Bought outright, the 48-film starter set and its accessories cost \$2,880. This can be paid over a period of two, three, or four years. Or, the 48 films and their "outfit" may be rented for a whole year for only \$360, this to apply against purchase at the end of the period if desired.

### "TV Teachers College"

What is believed to be a "first" in commercial television broadcasting, a grant of more than \$70,000 in time and production costs to the Chicago Board of Education by WGN-TV, has enabled the Chicago Teachers College to offer credit courses in the improvement of reading and arithmetic instruction. This program is not only serving the teachers of the Chicago Public Schools, but it is an in-service training program for all teachers in the Chicago area.

Coordinators of the reading series were Ruth C. Hoffmeyer, bureau of curriculum development of the Chicago Public Schools, and Thomas J. Cresswell, Chicago Teachers College. The arithmetic series is being coordinated by John O'Donnell, department of student teaching, and William Purcell, department of mathematics, Chicago Teachers College.

Could it be that through using electronic tools there can be more intimate communication between teacher and learners than is possible in a simple face-to-face, person-to-person relationship? Could it be that the tools of the mass media are the ones that can bring about the most intimate communication between a leader and a group—communication that is very personal and that affects people as individuals? Sounds completely paradoxical, doesn't it? But wait!

Teachers of foreign languages have discovered how intimate communication can be when they use minimum language laboratory equipment that provides for group listening through earphones. Recorded sounds heard by pupils through earphones come to them directly and reach them innermost. There are no distracting sounds, and the experience is much more personal than when sounds come to their ears from a loudspeaker. Max Bildersee refers to this phenomenon as the "effect of *air gap*." That's an apt term; and although research has done nothing yet about measuring the relationship of "air gap" to the effectiveness of communication, any teacher who has had experience with language laboratory instruction knows of its significance. The less "air gap" the more intimate the communication.

Teachers using language laboratory listening equipment have also discovered some things about sound motion pictures. They have observed that when pupils watch motion pictures and hear the sound track through earphones, the total impact seems to be strikingly more effective. This likely is the result of something more than just the elimination of distraction to enforce greater concentration. The effect is one of more direct and meaningful communication. It is intimate communication.

Possibly the current emphasis upon the use of electronic equipment in the teaching of foreign languages could eventually make a contribution to instructional methods in all subjects that is now little more than a wild dream. If sounds coming through earphones do cause more intimate communication and more effective learning, why should they be confined to the sounds of foreign languages? These tools can be adapted to many subject matter areas and all grade levels, and the meager experimentation that has been carried on up until now should be immediately expanded and intensified.

These comments, to this point, have been concerned only with recordings: recorded sound on tape and disc, and sound and pictures recorded on film. With all recorded materials there is an obvious remoteness in time. The sound and the pictures were necessarily recorded sometime in the past. They are not immediate sound. This fact may not affect the intimacy of the communication, but it likely affects the reality of the experience. Teachers speaking into microphones to pupils with earphones would be an example of immediate intimate communication.

Another example, and one that represents the ultimate in immediate intimate communication, would be watching a live educational television program and hearing the sound through earphones. A unique characteristic of the television medium is its ability to provide for immediate eye-to-eye communication between speaker and listener. Only through the medium of television can a communicator look directly into the eyes of two or more listeners at the same time he is speaking. In fact, through the use of television, a communicator can speak with eye-to-eye contact to an unlimited number of people; and if they are listening through earphones, the intimacy of the communication would be at its peak.

A few years ago, an incoming Governor of an eastern state quashed the development of educational television in that state with a glib and ignorant pronouncement. In effect, he said that he wanted no television screen to come between the teachers and the children of his great state! How wrong could a man be and still be governor?

## Intimate

## Communication

*Paul C. Reed*

# Distributing Sight and Sound

*by Paul C. Reed*

**Y**OU can see from the labels on the accompanying drawings what a problem it is to name an audiovisual facility so new in concept as this one is. Neither architects nor educators have found a simple name for it. It's a Forum Room, a small auditorium, an engineering and distribution center for radio and television programs, a facility for central sound and closed circuit television programs. It is all of these things, and radio and television studios and workshop, too. Imaginative teachers already foresee that this center for sight and sound can become an exciting influence in the instructional program of Rochester's new East High School when it opens in September 1959.

While the Audiovisual Committee was at work in the spring of 1954 planning for the new school, it learned that another committee was recommending a small auditorium. The Audiovisual Committee "hitch-hiked" on this idea and expanded it to include the following recommendations in its final report:\*

"The Audiovisual Committee recommends that this small auditorium be equipped for sound amplification and reproduction and picture projection the same as the main auditorium.

"It is also recommended that there be a sound

control booth provided for this small auditorium so that it may be used as a radio studio and possibly eventually for the origination of simple television programs. This sound control booth would be equipped with amplifiers, microphone controls and recording facilities. If the school is to be equipped with a central sound system it should probably be centered in this location.

"In its function of radio-television studio, this small auditorium is visualized as a miniature of the large studio at WHAM-TV Radio City. (Now WROC-TV). It might be possible to plan the building so that the sound control booth also serves an adjacent room which could be used as a smaller studio for instructional and recording purposes. The control room should be planned so that both the small auditorium and the adjacent room can be used simultaneously."

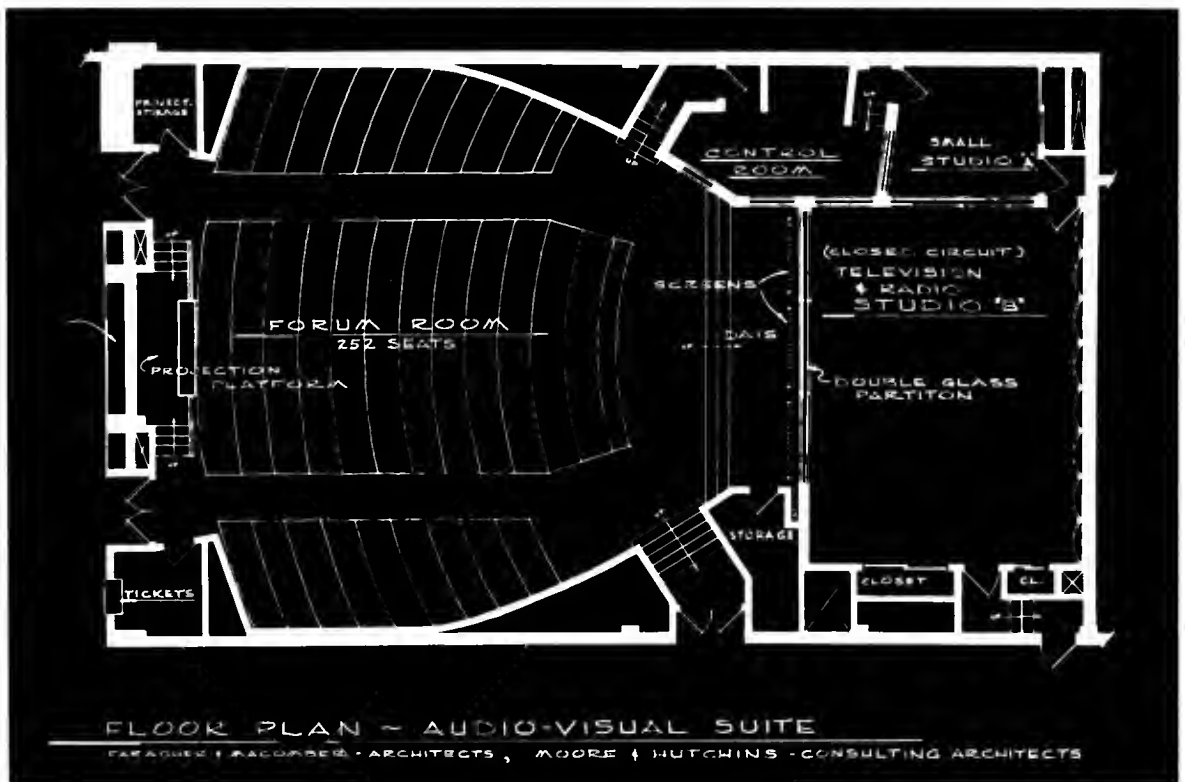

The architects, Farragher and Macomber, took the ideas from there, and working closely with members of the committee while the plans were being worked out on the drawing boards, developed the unique and brilliant solution that is pictured here.

The Forum Room or small auditorium can be used by itself for all kinds of meetings and groups completely independent from the radio and television workshop studios. Three or four English or social studies classes, for instance, may come here to share a speaker from outside, or to listen to a panel discussion, or to see projected

\*Copies of this report are available upon request to Dr. Howard C. Seymour, Superintendent of Schools, 13 S. Fitzhugh Street, Rochester 14, New York.

Aerial photo shows impressive plant of Rochester's East High School. The sight and sound suite is shown at center foreground (outlined). The music building is to the right, with the main auditorium at its rear. The instructional materials center is housed on the second floor of the building in the center (outlined).

## Distributing Sight and Sound

pictures. The room will be used for faculty meetings, for parent associations, and other community groups. It is not, however, a "little theater." In place of a stage is a dais, up just two steps from the floor. A drapery across the back shuts off the studios and provides an appropriate and simple background for speakers, a panel, or for a projection screen.

There is no projection booth at the rear of the room. Here there is a platform, up four steps from the floor, and across the front of this platform is a built-in table-high ledge, wide enough to accommodate any projection equipment. Of course there is an integral loud speaker system and microphone outlets so that any sound can be reinforced for hearing within the room, or picked up in the control room and distributed to any or all of the more than eighty classrooms in the building.

The "control room" is virtually the electronic heart of the whole school. Here are the amplifiers, the control panels, the monitors, that will make it possible to distribute sight and sound to all the classrooms. It may very well develop that the one control room will be too small for the many functions it will perform. If this occurs, "small studio A" likely will be transformed into "control room B."

The decision to include complete closed circuit television facilities for the school was made only last year. But this possibility has been foreseen, and the plans were flexible enough to accept this change. Here is what had been recommended about television in the committee's original 1954 report:

"Already experimental plans are moving forward for a central closed circuit television system in various educational institutions. Such a system distributes visual information within a school in the same manner that a central sound system distributes sound . . .

"Because of the theoretical practicality of this kind of picture distribution and because this might be a desirable method for use in the new high school at some future time, it is recommended that as a minimum requirement suitable conduits be included in the new building to provide for a flexible closed circuit system."

That "future time" came sooner than had been expected in 1954. In the Spring of 1958, Superintendent Howard C. Seymour appointed a CCTV Committee to reconsider this original recommendation. The committee studied closed circuit television activities in other institutions and recommended unanimously that closed circuit television be provided at the time the school

Probably the brightest idea in this sight and sound suite is the soundproof, plate glass window wall between the studio workshop and the Forum Room. Even though the far wall in the profile drawing is an outside wall, the architects resisted any temptation to put the windows in that wall. They placed the windows inside the building and between rooms so they might *serve* the instructional program rather than *obstruct* it by bringing in glaring sunlight.

These three, eight feet square, double panels of glass, are windows that serve many purposes. They separate the live sound of the two rooms, but through electronics and the control room, the sounds from either room may be controlled and heard in the other. Groups in the auditorium with the lights dimmed or off may watch the activities in the studio unobtrusively and unobserved. And they can hear every word. With translucent projection screens placed at one or all of these windows, a whole new range of possibilities develop. Using standard projection equipment from the studio side, pictures may be projected to two hundred fifty-two people seated in the auditorium. Or, for closed circuit television, pictures may be projected from the auditorium side, and with or without live people in front of the screens in the studio, these pictures may be picked up by television cameras and distributed to as many as twenty-five hundred people seated in classrooms throughout the building.

Already, before the building is even completed and ready for use, its flexibility and adaptability to new uses has been demonstrated. Over five years will have elapsed between the appointment of the committees to plan the building and its completion. These elapsed years were not wasted ones, however. They were years of the most thoughtful, careful, and thorough planning and building.

One of the five fundamental principles and assumptions upon which the Audiovisual Committee had based its recommendations was that "*planning must be for the present and the future:*"

"In its deliberations the committee was constantly mindful that it was planning for the present *and* the future.

"Most of the audiovisual materials now being used in the schools—16mm sound motion pictures, educational radio programs, 2 x 2 color slides, tape recordings—were not even known 25 years ago. With the accelerated development of audiovisual communication methods, especially television in recent years, it is not possible for this committee to predict the specific audiovisual forms for the future. Planning must provide for flexibility."

"Flexibility" was thus a key idea in all of the audiovisual planning for this building, and the effect of this on the final plan will again be emphasized in the third article of this series to be published in the May issue. This final article will tell about the instructional materials resources center and the way it developed from another fundamental principle believed in by the committee: that "audiovisual materials are instructional materials and closely related to books and other teaching materials."

Forum and Radio Shop—"Telecast"

opens.\*\* They recommended: that the wires be pulled through the conduits that fortunately had already been installed; that television receivers be supplied for at least half the classrooms; that television camera and auxiliary equipment be provided; and that provisions be made for picture and sound pick-ups from some twelve to fourteen specified remote locations within the building. With these recommendations built into the building, sight and sound can be distributed electronically around and to all the corners—and there are many of them!

Now let's take another look at Studio B on the floor plan drawing and also in the profile drawing that shows it alive and in use. Studio B is likely to become one of the busiest rooms in the whole school. This can be a classroom for one or more sections of a new and very special English course in radio and television production. It surely will be the headquarters for one or more very popular extra-curricular club groups. It will be a principal origination point for instructional radio and television programs for classroom use within the school, and possibly throughout the school system.

\*\*This report is also available upon request to Dr. Seymour.

# Music Lessons by Telephone!

by *Sim Wilde*

**N**O one dials and nothing rings but the Asheville City Schools are sending their music lessons by telephone wire.

On any week day morning at 9:30 one can hear a familiar voice in six elementary schools say, "Good morning, boys and girls. It's music time again." And Mrs. Frances Martin, music supervisor, begins another lesson. The operation of the wired loop broadcast is simple, yet the situation is rather unique according to telephone officials. From atop a small room in City Hall, the teacher, plus one person operating the controls, sends the music lessons to grades one through six, five times a week. The only equipment involved is a microphone, an amplifier with a phono attachment, a tape recorder to keep a record of the broadcasts, and a piano on which to conduct the lessons. All this is hooked to a telephone wire which travels to the telephone company for further amplification to the inter-com systems in the schools. The principal simply punches the right buttons on the inter-com to send the broadcast to the rooms desired.

All this evolved in a strange way. One of the principals of the schools was not satisfied with the meagre time the music supervisor could spend in his school. He asked her to make some tapes of her music lessons so he could play them to his classes as desired. This seemed logical and the supervisor willingly did so. However, other schools demanded the same service and before long it seemed that all her time could conceivably be taken up in the making of tapes. This

would hinder her work at the various schools. It was at this point that somebody came up with an idea to have a music lesson broadcast to all the schools at the same time. In this way the supervisor could spend fifteen minutes a day on the air (or in the wire so to speak) and the rest of the day in field work and preparing the lessons.

Then began a search for the proper medium over which to broadcast the program. Commercial radio stations were contacted. Yes, all were willing to do the job as a public service but there were many complications. First problem was the time element. Radio stations have to work on strict time schedules. The lessons would have to be broadcast at the station's direction. This would constitute a major problem in the event of a sudden change. In addition the making of tapes and the use of other equipment made the radio stations an awkward place for the broadcast. No, a system under the direct supervision of the schools was needed. But who could afford a private radio station?

Then somebody remembered hearing somewhere that it was possible to send messages over telephone wire if there was some sort of speaker system on the other end. Of course! All the schools had inter-com systems. Why not send them over telephone wire to them?

A hurried conference was held with telephone engineers. They admitted it was, indeed, possible but that they had not been faced with the proposition before. The only cost involved, they said, would be the instal-

Top: A first grade's rhythmic activity to music of Bizet.

Center: Fifth-graders study woodwind instruments through broadcasts and charts.

Left: A junior high school monitor.

lation charges and the regular rentals the same as for a telephone. And they were eager and willing to help work it out.

The decision was made to experiment with two of the elementary schools the first year. The telephone company went right to work installing a line to the little room in City Hall and running the line into the schools. A local radio shop hooked the wire to the school inter-coms. On the business end of the idea, an amplifier was purchased with a phono attachment so that not only words and live music but recorded music could be sent out. The supervisor began the preparation of her scripts—planning to send to the first and second grades one day, the third grades another day, the fourth grades another day, and so on.

It was a smashing success. The teachers in the two schools found the music lessons well prepared and excellently done. Those who felt they had a meagre background in music found first rate music lessons done for them. In addition they were supplied with lesson plans so they could prepare for and follow up the broadcasts. The supervisor had at her immediate control many records and materials that the teachers found difficult to obtain. It was so popular that at the end of the year, another problem was faced. All the schools wanted in on the broadcasts.

This called for more consultation with the telephone company. Since there would be six schools involved this time, more elaborate plans had to be made to make the quality of the reception in schools near or

far acceptable. Telephone engineers had a suggestion at this point. Why not rent their amplifying equipment, let them equalize all the lines for volume and tone control, and they would guarantee reception to the schools. Agreements were made, a contract was signed, equipment was obtained, and the lessons were ready to begin.

Of course there were kinks that had to be ironed out. Some of the intercoms were not in too good condition. They had to be serviced and repaired. Variances in the age and make of the intercoms had to be allowed for. But gradually these troubles were solved and the quality is as good as the famous Bell Telephone quality can be.

If one should visit a sixth grade class in any of the six elementary schools participating in the program on a Wednesday morning one might hear a rendition of a famous piece of music as the program starts. Then would come the voice of Mrs. Martin explaining the music and telling about the composer and the conditions under which the music was written. From there the lesson would go on to songs in the music books the children have on their desks. They would participate in activities planned by the supervisor and sing along with her. They might listen meditatively while she explained the wonder of *Sunset* from the "Grand Canyon Suite" or they might shiver as they heard "Danse Macabre." Another time they might laugh delightedly as they clapped their hands in time to a rousing folk song. Then after fifteen minutes or so would come the end of the lesson with the same music signing off the program. One might then watch the teacher in the classroom as she led her class in follow-up activities. Later in the day one might observe as Mrs. Martin checked with the teacher to see if reception was good or if a certain part of the lesson went over to the students.

The cost? Less than half the cost of a teacher's salary per year. And the beauty of this type of broadcasting is that the telephone wire belongs to you 24 hours a day. This leaves much room for expansion and future plans. Foreign language lessons could be sent to elementary schools over the same hook-up. Adult education classes could be taught in the same way. Prominent persons could speak to all the schools at the same time, night or day. Civil Defense programs could be worked out so that all schools could be contacted in a matter of minutes. Communications from the superintendent's office could be sent at regular times. Et cetera, et cetera, and et cetera. There are thousands of possibilities for the use of this arrangement. Tentative plans are to hook all sixteen Asheville City Schools to the broadcast.

If your school has a telephone and an inter-com, you could have such an arrangement. But it will take the cooperation of many people. The example of the work done in Asheville is a tribute to the many people who worked to make the experiment a success. As usual the cooperation of Southern Bell in Asheville was at its best. The teachers and the principals were patient and understanding in the necessary interruptions and confusion at the beginning. The superintendent, E. C. Funderburk, was willing to let his personnel experiment with a new idea even at the risk of failure.

As a result of this community and professional cooperation, the schools now have a valuable and money saving system to provide its children with an improved music program.

And to think—you never get a busy signal.

A

B

# The Fabulous Language Labs

by *Elton Hocking*  
and *Robert C. Merchant*

ONE year ago, there were only about fifty high school language labs.<sup>1</sup> Soon there will be hundreds or even thousands of them, thanks to the federal matching funds available through Title III of Public Law 864, the National Defense Education Act. The provisions of this act, in turn, only reflect the recent awareness of our country's extreme deficiency in modern language skills, as expressed most recently by the publications of Dr. James B. Conant.

Countless language teachers and principals are now asking: What are the purposes of a language lab? Do they coincide with the purposes of our own language teaching? What kind of equipment do we want? What can we get for our money, including the matching funds? How do we choose equipment, install it and service it? How shall we make the best use of it?

The primary purpose of the lab is to multiply the aural-oral practice of the pupils, especially in the beginning classes, and thus to implement the accepted principle that foreign language skills should be acquired in this sequence: (1) aural understanding; (2) speaking; (3) reading; (4) writing. The general acceptance of this principle since World War II (when the armed services found that language students, and even language teachers, could not speak their foreign language, is extremely significant, for it rejects the "silent reading" primary objective of the

<sup>1</sup>See *Foreign Language Labs in Schools and Colleges*, by Marjorie C. Johnston and Catharine C. Seerley of U. S. Office of Education, 1958. Available from Superintendent of Documents, Government Printing Office, Washington 25, D. C. 35 cents.

See also *Standards for Materials and Equipment for the Improvement of Instruction in Science, Mathematics and Modern Foreign Languages*. Available free from Dr. Edgar Fuller, Council of Chief State School Officers, 1201 16th St., N.W., Washington 6, D.C. (Your superintendent doubtless has a copy of this.)

C

previous generation. The "deaf-and-dumb" techniques have now been abandoned, and hearing-and-speaking has been endorsed by the Modern Language Association, the American Council of Learned Societies, and by virtually every major organization of modern language teachers in our country. The CEEB, finally, has announced that a recorded test of aural understanding will be included in its foreign language tests, beginning one year hence.

Any teacher who still clings to the reading method and grammar-translation in the elementary course can not make good use of a language lab. On the other hand, any teacher who believes in the oral-aural method should have a lab. Even if the teacher's oral French (or German, or whatever) is faulty, he can profit, like his students, from excellent recordings and imitative practice.

If he speaks the language well, he can also make recordings for his students, and thus "multiply the good teacher." This is not the place to expound the techniques used in the language lab. Suffice it to say that electronic equipment and appropriate techniques can accomplish what was formerly possible only by semi-tutorial instruction; a ready comprehension of authentic foreign speech, good pronunciation habits, and an oral repertory of useful, high-frequency foreign phrases and expressions, spoken naturally.

Such are the purposes, in elementary classes, of the language lab. Each teacher or principal must decide whether these are also his purposes in offering foreign language instruction.

What kind of equipment? This is really a multiple question, for it involves money, scheduling, and a couple of moot points in the psychology of audio learning. (See diagrams.)

Mere listening to recorded material is doubtless better than nothing, but it is inherently passive and it soon becomes tedious. Vocal imitation is needed, for speaking is surely a do-it-yourself activity. This in turn requires a feeling of privacy (to avoid self-consciousness and to

heighten concentration); some acoustical isolation (to prevent a general uproar and inter-disturbance); and headphones (to shut out extraneous sounds and, more important, to achieve the person-to-person sense of immediacy that only headphones can give).

All this adds up to a row of acoustically-treated booths, however simple, along the rear and/or side wall(s) of a regular classroom. (See Diagram A.) A double glass partition enables the teacher to keep an eye on activities in the booths while conducting a totally undisturbed class.

A more ambitious layout (see Diagram B) fills the rooms with booths which can be transformed in a few seconds into normal seat-and-desk facilities.<sup>2</sup> This arrangement is desirable for small schools which cannot devote a room exclusively to language laboratory work. The entire class participates simultaneously in lab activities, rather than group by group, as in Diagram A.

The full-sized lab, whether convertible or not, raises the perennial question of whether it should be used by each class as a unit, or by individual students who drop in as they would at the library. Both types are found in the universities, where schedules and facilities generally allow more freedom of choice. For our present purpose it is assumed that the high school lab must be scheduled with the utmost efficiency, and that student and teacher schedules are best suited to class-by-class use of it.

Convertible or permanent, the booths of lab B should be wired so that individual recording facilities may easily be added later. As original wiring, the cost of this is negligible; as a later rewiring job it is costly.

<sup>2</sup>Cf. William F. Roertgen, "The Functional Language Laboratory," *Modern Language Journal*, January, 1959, p. 6.

Intermediate between B and C is the activated microphone technique by which the student speaks and simultaneously hears his voice through headphones. No recording is involved: he hears himself electronically while he is in the very act of speaking what he hears. Doubtless he also hears himself more or less by bone conduction, in the normal way. No research is yet available on the relative amount or the effect of thus hearing oneself objectively and subjectively at the same time. A more difficult research problem is to determine the possible gains or losses through the attempt to telescope the *production* of careful imitative foreign speech with the simultaneous hearing, comparison with the model, and criticism of one's speech production. Considerable research, both physical and psychological, will be needed to settle these questions. If the activated microphone proves to achieve results as good as those of individual recording and playback, much money can be saved on equipment. But this remains to be proved.

The complete laboratory with individual recording and playback for all students (diagram C), has always been considered the optimum arrangement. The student first engages in oral imitation, alternating with "his master's voice" (recorded); after several minutes of this, he plays back his own recording of what he has heard and said, thus hearing himself as others hear him. This playback enables him to concentrate on comparing his own performance with that of the master, and thereby to criticize and improve himself. Individual recording, followed by individual playback, maintains the natural separation and sequence of creation followed by review and self-criticism.

The individual recording facility for each student may be of three types: (1) a dual-channel instrument for each student; (2) a single-channel instrument for each; one multi-channel instrument serving as many as 16 students. Any of these may, and preferably should, be wired to a master switchboard or console which enables the teacher to "tune in" any booth and hear all that the student hears and says. A further refinement permits the teacher to converse with any student while the others are undisturbed.

*Dual-channel* instruments are somewhat more expensive than single channel, and most require a pre-recorded master tape for each instrument. Every machine is a self-contained unit, so that each student may be practicing a different lesson or language. This is the library type of installation, permitting complete flexibility. It is also the library type of study, assuming motivation and maturity on the part of the student. However, just as the library must have a great many books for its borrowers, this kind of language lab must have a great many pre-recorded tapes on hand. The task of recording, cataloging, filing, etc., is considerable and costly.

The *single-channel* installation requires only one master tape for the whole room. The "master" is played on an instrument operated by the teacher, and simultaneously is piped into all the booths. This "master-slave" arrangement, relatively simple and economical, facilitates the teacher's task of monitoring, grading and criticizing the work of the various students, since normally they are all doing the same thing at

## Your Money's Worth

[Diagram A]

**BOOTHS:** Commercially built, \$60 to \$200. Locally constructed, \$30 to \$150, average around \$70. Simple partitions (faced with acoustical material) added to tables cost only a few dollars per student position. Standards: As for classroom furniture, plus the need for visual and acoustical isolation. **CONVERTIBLE** booths, suitable for eventual use in Lab B or C, can be constructed by using dividers hinged to fold down over the table top. In Lab B or C, a hinged front panel would be added.

**ROOM TREATMENT:** Varies with the room. At least some acoustic tile on ceiling and upper wall to deaden echoes and lower noise level.

**EARPHONES:** Crystal should be used, since nothing cheaper is acoustically adequate. From \$12 a pair (can be damaged by extremely high humidity) to \$20 for "metalseal" phones.

**ELECTRONIC AND ELECTRICAL WIRING:** Varies with the room. Average: \$3 to \$10 per student position, including materials and labor.

**RECORDER-PLAYBACK:** Conforming to N.A.R.T.B. secondary standards for frequency response. If used for re-recording or speech correction, should meet N.A.R.T.B. primary standards. Equalization characteristics: N.A.R.T.B. recommended practices insuring compatibility from one machine to another.

Wide band noise: At least 35 db below 3 percent harmonic distortion level.

Flutter: Below 0.3 percent. Wow: Less than 0.1 percent, r.m.s. Such an instrument costs from \$200 up.

**MICROPHONES:** Almost without exception, those furnished with instruments are of poor quality. Adequate replacement cost from \$35 to \$150. Remember that the "weakest link" analogy holds here, and a recorder will be no better than its microphone and earphones.

the same time. However, a different lesson or language may at the same time be piped to a desired number of booths by using any one of them as a sending station for the others. This in turn may be subdivided at will.

Until very recently, the master-slave arrangement required a recorder-reproducer in each student booth, operated by the student and sometimes misused or abused by him. The resultant

## Equipment for Your Language Laboratory Needs

### [Diagram B]

The general specification for lab A apply here. It may be desirable to have two or more playbacks mounted in or near the teacher's desk, and an intercom amplifier (\$50) and microphone to enable him to talk to students through their earphones. Movie equipment, slide projector, and other aids may be added effectively. Room wiring should be planned for future expansion into lab C, and may cost from \$5 to \$25 per student position, including materials and labor.

### [Diagram C]

The specifications for labs A and B carry over here, except that the requirements for the student recorders, if not used for re-recording or music, can be less stringent. The N.A.R.T.B. frequency response standards may be modified to let the upper decibel response limit be a mirror image of the lower limit. Flutter: as high as 0.5 percent; wow tolerable to 0.3 percent, r.m.s. Microphones may be in the \$10 to \$35 range. Great attention should be given to simplicity of operation, durability, ease of maintenance, and similar factors. The technical expert should check on levels, impedances, and actual functions performed. Reject an installation in which the student cannot hear his own voice through earphones at a 60-80 db level, both while recording and during playback. Individual student recorders: \$175 to \$550, installed. Multi-channel equipment: From \$455 to \$625 per student position.

A centralized switching system for channeling lesson material to the students, with monitoring and intercom, will cost from \$50 for a simple switch panel to \$1,500 or more for a functional, attractive control console with extreme flexibility.

Little faith can be placed in advertised specifications, since there is no controlling agency. Secure competent technical advice before making decisions.

breakdowns and delays impelled the experts to instruments need no longer be located in the student booths. Rack-mounted in some central location, the instruments are remotely operated by students using switches in their booths, or—more simply—by the teacher using a master seek a remedy, with the result that the “slave” control for all instruments. Another innovation, the multi-channel instrument, can serve 16

booths and is also operated by the teacher. With both of these arrangements, the students can do all that they now do with their individual instruments.

Poor quality, whether of sound or of mechanical performance, is never a bargain. One high-quality (not necessarily hi-fi) recorder-reproducer is better than a dozen “cheap” instruments of telephone-quality sound. Mechanical breakdowns are obviously demoralizing to students and teacher alike. But the insidious failure to transmit all the necessary sound frequencies is even more serious, for it may not be detected by a teacher who speaks the language well. Just as we “hear,” over the telephone, a good many sounds that are not really transmitted, so will he equate easy intelligibility, in the foreign language recording, with full reproduction. But his students will never hear those missing high-frequency sounds in the strange new language.

Rule of thumb, or of ear, must be abandoned by teacher and principal and purchasing agent. Likewise, rule of price, of salesman and advertising blurb. In their place, sensitive instruments must be used by an expert, perhaps a local radio engineer or hi-fi repair man. For a proper fee he should first choose (on approval!) whatever satisfactory equipment your budget permits, by a study of its guaranteed specifications and performance ratings. Competitive bids should then be sought. On receipt, the equipment should be tested by instruments, and rejected if the expert finds that simple adjustments do not bring it up to advertised performance.

Installation and wiring, however simple, should be planned and supervised by the expert. He will forestall the unwitting blunders of the local handyman, or even the licensed electrician. Knowing electronics, he can prevent such “gremlins” as crosstalk, install an automatic shut-off, and safety devices to prevent the hazards of shock or fire.

Like your car, your audio equipment requires regular service to prevent deterioration and breakdowns. The servicing should be done under contract by someone who understands electronics, perhaps a hi-fi service man. Regular lubrication, adjustment and tests will forestall serious trouble. No outside help is needed for the minor details. Record and erase heads should be cleaned daily. This is utterly simple, and it requires only a few seconds for each machine, but the job should be done carefully. Tapes can be easily spliced (on the right side!), using a standard splicer. Today's students, familiar with gadgets, easily learn to operate controls correctly. (But beware of the inquisitive boy who brings a screwdriver!)

The prospective purchaser of modest equipment should visit at least one or two well established labs similar to what he thinks he wants. After seeing and hearing them in operation, and talking with teachers and principal, he will be able to plan wisely and avoid disappointments. If he is going to have an elaborate installation, his superintendent should engage the services of an educational consultant in the field of language labs. Enlightened advice, both educational and technical, is the least costly component of the language lab.

# Louisville's Hi-Fi Library

## *A virtually complete audio service*

### *is offered to local citizens*

### *by the Louisville Free Public Library*

**O**NE of the largest collections of tape recorded music available anywhere is turning audiophiles into bibliophiles and vice versa. With it, the Louisville Free Public Library is providing a unique service to a population of almost 400,000.

Dorothy L. Day, head of the library's audiovisual department, is responsible for providing this "mountain of sound" to the public. Overall direction is the province of Clarence R. Graham, director of the nineteen-branch, city-wide library and originator of the present audiovisual setup.

Naturally, not every Louisville resident has the same taste in music. Miss Day supervises a battery of 39 Ampex model 350 professional tape recording machines and ten Ampex model 300 professional console models. The two FM stations operated by the Library (WFPL—89.3 mc, 250 watts, and WFPK—91.9 mc, 3000 watts) play pre-recorded tapes and longplaying records, 12 hours a day, seven days a week, all year long. Even the citizen without an FM radio is taken care of, as FM receivers can be borrowed on a library card!

Both stations distribute printed program schedules listing a wide variety of programs, ranging from "Old MacDonald Had Some Wood" to lesser-known works of Alessandro Scarlatti and tape recorded discussions on such subjects as "The Philosophy of Psychology."

The Louisville Library's audiovisual unit also pipes music over some 40 leased wires to city hospitals and listening rooms scattered throughout the branch libraries and the University of Louisville. The hospital line broadcasts music for 10 hours a day. Another line connecting the hospital and the library tape records lectures in the hospital auditorium for later playback to other classes.

City high schools and the University of Louisville are connected with the library's Ampex tape central too. As a matter of regular course, drama, music and music history instructors assign listening homework. The student can request that his assignment be played in listening rooms in his school or later in the branch of the library nearest his home.

Dramatic tapes of plays, lectures and discussions are piped over closed lines the same way. Many of these tapes, secured from the National Association of Educational Broadcasters, are also broadcast over both FM stations.

Another private wire use has just been innovated. It's a series of tape recorded reviews of children's books, which are piped over the circuits to assistant librarians in the branches and serve two purposes—familiarizing the staff with all the latest children's books and training new staff members.

Housed in two audio control rooms, these professional console model recorders serve still another function. Concerts of the Louisville Orchestra, performances by the Kentucky Opera Association and lectures at the University of Louisville are picked up by private wire and recorded at 15 inches per second back in the audio control room. These tapes then become part of the library's regular source for FM program material, at present consisting of around 16,000 pre-recorded tapes (most at 15 inches per second).

From the LP record library, around 15,000 records, each card holder can check out five LP discs at a time.

What has all this done to the library's original function? Since the start of the audiovisual program, book circulation has gone up 40 percent!

A biology teacher uses an overhead projector for a TV demonstration.

# Classroom Projectors Find Use in ETV

by Lou Penegy

**O**VERHEAD projectors are proving to be almost indispensable in programming in-school telecasts of the Alabama Educational Television Network. The network, the only one of its kind in the country, has three programming agencies, which reach approximately sixty thousand students per week.

At the Birmingham ETV studio, the overhead projector is in daily use by two of the direct teaching instructors. Bettye Watson, Alabama History instructor, uses it to sketch Indian trails, Civil War battlefield engagements, or the passage of stern-wheel flatboats through Alabama waterways.

Biology teacher Mary Rogers, pictured above, is able to "animate" diagrammed insects and plants. First, she projects the outline of the object under discussion, such as plant leaf or a fly wing, drawn on a transparency onto a screen which is picked up by the studio TV camera. Then, in loose-leaf style, a transparent sheet containing a few basic structures is dropped over it. This is followed by additional detailed art on consecutive transparent sheets consecutively dropped over the original outline, giving the student a logical, step-by-step learning sequence.

Producer Ted Nicholas claims the unit is "the most flexible and exciting visual aid" at the Birmingham studio. His opinion is that "its potentiality for ETV work has yet to be really tapped." And program coordinator Frank Martin believes he has found an "ETV first" use for the projector unit.

Although the studio also has a rear screen projector, occasionally complications make its

use impractical. One such instance occurred when the studio was producing a high school play which called for drama floor staging space and for a sizable chorus. The choir, scheduled to handle the musical bridges between scenes, had to be "live." The resulting mass of students scheduled for the studio curtailed the floor space and thus the required throw of the rear screen projector.

The overhead projector was brought into use and it was discovered to satisfactorily project an acceptable picture on to the studio rear screen.

The problem was to make a transparency for the needed setting; in this case it was the side of a specific cathedral in France. An illustration from a book was photographed, and the negative was enlarged to an 8 x 10 transparency. This was placed on the projector, which needed only a fifteen-foot throw to create a "life size" illusion when it was projected on the rear screen.

Mr. Martin also noted that the overhead projector uses two thousand watts less electricity than does the standard studio rear screen projector. A former motion picture theatre manager, he commented that this same principle could even be used by projecting from behind a tightly framed bedsheet where a rear screen is not available, but a good special plastic translucent screen is much to be preferred.

The producers are eager to try additional experiments in the application of the projection unit on ETV, and are interested in exchanging ideas with others who have had experience with various types of projectors in television programming.

**NEW**

FROM **UNITED WORLD...**

# 3 Important Film Series!

## A Complete Basic Human Activities Series

### "THE WAY WE LIVE"

Photography by  
Louis de Rochemont Associates

In this dynamic new series, United World has organized realistic and socially useful experiences into teachable film form to make it easier for all children to learn how to live more effectively with others in this global age. THE WAY WE LIVE series emphasizes how the basic activities of mankind are carried on from place to place. Throughout each film differences in the ways of doing similar things are shown in terms of differing environments and stages of cultural development. Each of the ten films in this series runs for approximately 20 minutes and sells for \$110.00.

#### Group II: "MAKING A LIVING AROUND THE WORLD"

- TRADE AND TRANSPORTATION
- ANIMAL RAISING, HUNTING AND FISHING
- FARMING IN NORTH AND SOUTH AMERICA
- FARMING IN EUROPE AND ASIA
- FORESTRY
- MINING

#### Group I: "FAMILY LIVING AROUND THE WORLD"

(Previously released)

- SCHOOL CHILDREN
- CHILDREN AT WORK AND PLAY
- FAMILY LIFE
- HOMES

## Physical Education Series

### "THE SPORT OF DIVING"

In Full Color

Demonstrations by Vicki Draves, Olympic Champion in both springboard and platform diving. Instructional commentary by Lyle Draves, Olympic Teams Diving Coach. Each of the 3 films in this series runs for 10 minutes and sells for \$120.00.

- FUNDAMENTALS OF DIVING...Here are pictured the first simple and correct practices for learning water entry and body control.

- SPRINGBOARD AND FRONT APPROACH...This film stresses the importance of the diver's approach to the end of the board and the spring. Stop-motion and slow-motion photography permits analysis of action.

- SWAN DIVE AND FRONT JACK-KNIFE...Here the instructor teaches the simple steps in achieving form and perfection, with stop-motion and slow-motion scenes on the 3-meter board in mid-air.

## Practical Study Units on Famous Shakespearean Plays!

### "THE WORLD'S A STAGE"

Great moments from Shakespeare's greatest plays...all made under exacting conditions of authenticity in England and performed by the gifted players of the OLD VIC REPERTORY COMPANY. Each film runs 13 minutes and sells for \$70.00. Their short running time makes these motion pictures excellent classroom teaching tools for all English departments.

Purchase orders for the films in these three new series should be directed to: Education Division, United World Films, Inc., 1445 Park Avenue, New York 29, N. Y.

NOTE:  
Purchase Consideration Preview Prints Are Also Available!

- ANTONY AND CLEOPATRA (Act III, Scene XIII)
- JULIUS CAESAR (Act IV, Scene III)
- KING LEAR (Act I, Scene IV)
- MACBETH (Act II, Scene II)
- MIDSUMMER NIGHT'S DREAM (Acts I, II, III...Lover's Scenes)

- MIDSUMMER NIGHT'S DREAM (Act V, Scene I...Pyramus and Thisbe)
- OTHELLO (Act III, Scene III)
- TWELFTH NIGHT (Act II, Scene V)
- WINTER'S TALE (Act V, Scene III)

# FILMSTRIPS

by Irene F. Cypher

At one time when we were screening for this month's previews we almost thought we might come up with a completely audiovisual column, there were so many sound-filmstrips. This is particularly interesting, for it would seem to indicate a definite trend toward such material; it would apparently indicate approval of the combination as a desirable one. There was a time when sound filmstrips did not arouse much interest or enthusiasm on the part of teachers, and much of the material produced was, in our own personal opinion, all too much like many of the commercials on radio and television. The pictures of the filmstrips were fairly good, but when it came to the recordings there seemed to be a universal tendency to employ narrators who sounded like high-pressure salesmen or itinerant preachers. Perhaps some of the criticism of this pattern made itself felt, for certainly the newer productions have come out from this pattern and are of much better quality insofar as the records are concerned. This is a very welcome sign, for there is a definite place for the sound-filmstrip as an instructional device. We all need to remember, however, that pupils can sense any trace of "snobbishness, insincere-emoting and ivory-tower preachiness." The record which provides the narrative for a filmstrip must adhere to the same standards set for the visual part, and must be of equal quality and high audio tonal value. We were quite intrigued by some of those we previewed, and here present them for your consideration.

## Cadet Rouselle and The Raftsmen

(2 single strips, color, each with record; produced by National Film Board of Canada and available from Stanley Bowmar Co., 12 Cleveland St., Valhalla, N. Y.; \$11 for each filmstrip-record unit). There is a richness in French Canadian folklore that has tremendous appeal. In the two filmstrips here considered, the appeal is to both eye and ear. The songs themselves are gay, melodic refrains that seem to stay with you, and the recordings are good. The pictorial content of both strips is not only colorful, but seems to catch the spirit of the songs and make them

live. In particular, teachers and pupils will enjoy the art work of "The Raftsmen." The original art work was done by the children of a Canadian school as part of a special project. It should prove interesting to discuss the drawings and to note the references to customs and life of the woodsmen in the Canadian northwoods area. This excellent material for art, music and social studies at many grade levels, should also be recommended for clubs and camp groups.

## Desert Plants

(2 single strips, color; produced by Moody Institute of Science, Los Angeles 25, California; \$6 per strip). "Our Desert Treasure" and "Miniature Plants of the Desert" provide us with a very complete pictorial story of plant life in the desert areas of our southwest. We discover that the desert is the home of many interesting plants and creatures, from the Joshua tree to the jack rabbit; we also discover what irrigation has made possible in turning deserts from great waste areas into highly productive areas. The student who has never seen the many beautiful types of desert plants will be interested to find how many kinds of cactus blooms there are; he will also be interested to learn of the many scientific studies dealing with plants and life on the desert. This type of filmstrip has value for curriculum purposes, and it is also enjoyable as a pleasant viewing experience.

## Seed Plants

(6 strips, color; produced by Creative Education, Inc., 340 N. Milwaukee Ave., Libertyville, Ill.; \$28 per set, \$5 single strips). Growing plants are an integral part of the life around us, and it is important for pupils to have some clear concepts of how plants actually grow. From seed to flower and fruit, this series shows us many such details: what happens when a seed is planted; what are the separate functions of roots, stems and leaves; how does a plant develop and mature; what uses do plants serve in the life of man. The photographs are clear and well defined, and the material is planned to meet the needs of pupils in the middle science course work.

# HISTORY COMES TO LIFE

in this **NEW** Series of Filmstrips on America's Glorious Past!

## THE CHRONICLES OF AMERICA FILMSTRIPS

15 HISTORIC MILESTONES IN THE  
INSPIRING STORY OF AMERICA

*From Columbus' Voyage into Uncharted Seas—  
Through the Courage of the Early Settlers,  
The French and Indian Wars,  
The Heroic War of Independence,  
The Opening of the West —  
To the War Between the States*

**\$97.50 FOR THE COMPLETE SERIES  
OR \$7.00 EACH**

**Comprehensive TEACHER'S GUIDE Free**

### **An Educational Adventure**

#### **in the Development of Our Democracy**

*How thrilling is the story of America!* Here now, young people can see the great heroes, the villains, the common man, spring into lifelike dimensions. Washington, Paine, Wolfe, Clark, Boone, and scores of others become flesh and blood — no longer mere names. Now the student can identify himself with these, relate to the moving historical episodes which gave birth to his democracy.

### **Largely Based on the Accurate Reconstructions Presented in the Chronicles of America Photoplays**

The *Photoplays* represented the culmination of ten years of painstaking effort by teams of outstanding specialists in the scholastic disciplines and the professional arts, and have achieved recognition as a significant tool in the educational process in our country. The production of the *Filmstrips* has been inspired by the same critical spirit, the same impatience with half-way measures, the same insistence on historical accuracy and high artistic standards.

### **An Unparalleled Opportunity**

Through the *Photoplays* has come a new source of authentic, original material for filmstrips, never before available. Never before did the possibility exist for portraying America's great heritage so dramatically and realistically in filmstrips. Here was an unparalleled opportunity for the Yale University Press Film Service, in keeping with its long tradition to make an important contribution to a better understanding of our country's history.

That is why *The Chronicles of America Filmstrips* are unique as a teaching aid. They emanate from the deep, wide range of historical riches presented in the *Photoplays* and other rare sources. Thus, the Film Service can offer these inspiring "educational adventures in the development of our democracy" at a cost that makes their special advantages easily accessible to all.

A FITTING COMPANION TO OUR OTHER ESTABLISHED TEACHING AIDS

## THE PAGEANT OF AMERICA FILMSTRIPS

30 UNITS

**\$195.00 for the Complete Series or \$7.00 Each  
including Teacher's Guide Free for Each Unit**

### **From the Primitive Indian to Atomic Power**

A magnificent panorama portraying five centuries in the life story of America — its growth and development presented in a wide, comprehensive range unmatched in the educational field. All important phases are covered, including our sociological, industrial and cultural progress.

Created by top-ranking historians and visual education specialists to the highest standards of scholarship and historical accuracy, this brilliant series has provided a rare teaching instrument in nearly every phase of the curriculum. The graphic realism of its images brings to the student a strong sense of participation, providing the basis for a better understanding of the vital problems of today.

## THE PAGEANT OF AMERICA 15 VOLUMES

A fascinating tapestry of over 11,000 rare, authentic pictures, woven together by a colorful text. A pictorial history of the adventures and statesmanship of our people — an inspiring guide to the youth of America.

**\$147.75 complete, or \$10.75 per volume**

## THE CHRONICLES OF AMERICA 56 VOLUMES

Written in stimulating narrative form by outstanding specialists — each volume with all the dramatic appeal of a novel. The story of the forces in action that built our nation — history at its authentic, readable best.

**\$199.00 complete, or \$3.95 per volume**

*Through these Filmstrips and Books, Educators Will Discover New Vehicles for Creative Teaching. Youth Will Take New Pride in Our Great Democratic Heritage. Order Now.*

# YALE UNIVERSITY PRESS FILM SERVICE

386 Fourth Avenue, New York 16, N. Y.

## FILMSTRIPS

(Continued from page 192)

### French Language Series

(Set No. 1—5 strips, color, with correlated records; produced by Pathe-scope-Berlitz, 10 Columbus Circle, New York, N. Y.; \$84.50 for Set No. 1; consult catalog for prices of complete set of 40 lessons to be produced). Never before has there been such interest in language study. Certainly anyone who is undertaking the study of French will find this audiovisualized unit both appealing and instructive. The filmstrips provide a human interest story, photographed in France; the records provide opportunity to hear and participate in a multi-voiced native French narration-at conversational pace. There are many potentialities for using both filmstrips and records. We personally feel that they bring a life-like quality to the study of French that will be particularly helpful to the beginning study of that language. The unit indicated here is the first in what will be a set of forty lesson units.

### The Man Without a Country

(single strip, color, with record; produced by Films For Education, Audio Lane, New Haven, Conn.; \$15 for filmstrip and record). Edward Everett Hale's story of Philip Nolan is here pictorialized for us, with a recorded dramatization by members of the Yale University School of Drama. The presentation is faithful to the story and highlights the main points of interest. It is intended for use with intermediate, junior and senior high school classes. Art work and color quality are vivid. The narration is called a dramatization, but is not a staged, over-emotionalized production; the tonal quality is level, informative and clear. Material of this type should stimulate further interest in reading, and also help to make "literature" take on a greater degree of reality.

### Life Long Ago

(6 strips, color; produced by Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$32.40 per set, \$6 single strips). Really to understand life on this earth today, we must know something of what transpired centuries ago. With the help of the Chicago Museum of Natural History this series shows us something of what happened in the coal age; what happened when reptiles ruled the earth; what we know about life long ago and how man has been able to read the stories told by fossils. There is always a fascination in seeing how scientific study has enabled us to reconstruct the story of the past. These filmstrips have special value when used in conjunction with text materials and with visits to museums and areas of historic-scientific importance.

### People and Pets

(single strip, color, and record; produced by The Humane Society of the United States, 1111 E Street, Washington 4, D. C.; \$1 charge to cover postage and handling). All too often the owners of pets fail to realize the responsibilities which go with such ownership, and also fail to give their pets the proper care. Working with the Girl Scouts of America, the producers of this unit have given us a clear picture of what it means to be the owner of a pet; of how we should care for cats and dogs, and what societies have been organized to assure proper control of animals. Many interesting facts about animal care are outlined. The material is designed for children between the ages of 7 and 14, but this is another instance when we would recommend disregarding rigid adherence to such designations. This set will be valuable for pet owners of any age.

### Roots of Religious Freedom

(single strip, color; produced by Jam Handy Organization, 2821 E. Grand Blvd., Detroit 11, Michigan; \$5.75 for strip). Everyone is quick to state that religious freedom is guaranteed by our Constitution, but not everyone can actually explain how religious freedom came to have such significance in the colonization and development of the United States. Some facts have been emphasized, some have been forgotten. This strip attempts to show how many groups entered into the

early development of our country and how important it became to all of them that the principle of religious freedom be protected. The strip is one with special value and meaning for upper elementary and junior and senior high school students, to help in developing an attitude of tolerance and in acquiring an appreciation of group rights and responsibilities.

### Artists of Holland

(2 strips, color; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.; \$6 each). Learning to know and appreciate the work of great artists is a wonderful experience and provides opportunity for personal enjoyment. In this instance the producer has given us examples of the works of *Vincent van Gogh* and *Rembrandt*. The paintings shown were photographed in many different museums and give a broad range of the period in the artists' lives. Close-ups allow opportunity for examination of parts of paintings and of details. The strips are the equivalent of field trips to view the actual canvases; very often such filmstrips are better than field trips under hurried circumstances, for the viewer can study the strips at will and under conditions when they are really used and needed. Pupils are able to consider at greater length and to go over the material many times. Of course there is the added value that many pupils will never visit the museums where these paintings are hung, and are thus enabled to see material they would otherwise not see. Recommended for use in art classes at many grade levels.

### Eskimo Art

(2 strips, black and white; produced by the National Film Board of Canada and available from Stanley Bowmar Co., Valhalla, N. Y.; \$3 each). All too little attention has been focused on the wonderful skill and highly developed native art forms of the Eskimos. Examination of their figures carved in stone, ivory and bone reveals great skill, a sense of humor and fine craftsmanship. *Eskimo Carving* provides us with splendid examples of figures illustrating all forms of Arctic life. *Haidar Argillite Carvings* concentrates on the carvings made by the Indians of the Queen Charlotte Islands from argillite, a dark, soft slate. Both strips bring us material that will help to increase appreciation of the Eskimo as an artisan. They are especially valuable for use in art classes and in social studies.

by Max U. Bildersee

A simple leaflet, "Nobody Listens?" states bluntly in conclusion, "When we get the fine ART OF LISTENING under control, we will have perhaps taken the single most important step in our education — be we children or adults."

This leaflet, published last November by the Middletown (N. Y.) Public Schools, is addressed to parents, teachers and children. It points out that although we begin to teach the arts of listening in Kindergarten (Remember, "Boys and Girls, this is Listening Time") some colleges are holding classes to teach college students how to listen.

When do we learn to listen? We are born able to hear and indeed our total language facility before reading is begun depends not only on the ability to hear — but also the ability to listen. Parents listen anxiously for the child's first words as evidence of this.

The leaflet underscores the fact of difference between listening for pleasure and listening to learn. It also points out that sound can be distracting when we do not want to listen. It charges all with developing good listening habits and good listening manners.

So — schools are aware of the importance of good listening. And they are doing something constructive about it. The art of listening must be developed for all children, exceptional or normal. All children and all adults use their ears from morning 'til night.

An imaginative teacher dealing with slow learners needing added help in the fundamental areas of reading, spelling, arithmetic and aural comprehension used the tape recorder to her advantage and to the advantage of her students.

Asked to describe what she did, the teacher, Mrs. Russell of Kingston, New York, said, "I sought to give these non-readers information, practice in listening and encouragement to learn."

Her methods were quite simple, and adaptable to any classroom. Mrs. Russell acquired tape recordings from broadcast sources, she invited more capable students to make special tapes for these less gifted children, she prepared special remedial tape recordings

herself and finally, she encouraged these special students to prepare tape recordings which indicated progress. These, then, were less gifted children studying on their own!

Broadcasts of stories, science talks and music intended for in-school listening were recorded and made available to the children. During the reading instruction period, a waste of time for those needing such deep remedial therapy, these youngsters were

encouraged to devote their time to listening.

The reported results are most interesting. According to Mrs. Russell, "They (the children) were able to listen to many more stories than a teacher would ever have time to read to them. There was a big growth during the year in their listening span. These listening periods gave them things to write about, to create pictures about and they had as many things to 'tell about' as the children who were reading — so there was observable improvement in communication."

One other observation made by Mrs. Russell in this particular connection is that more tapes should be made for this particular purpose. She further urges that, because a slow-learner needs everything geared down to his pace, story material for him should be read

**"No, I'm a plumber**

*...but I know good recording tape"*

AUDIOTAPE, the thinking recordist's tape, gives you the full, rich reproduction so satisfying to the happy audiophile — be he doctor, lawyer or Indian chief. Because behind every reel of Audiotape are two decades of research and development in sound recording.

When you buy a reel of Audiotape you're getting the tape that's the professionals' choice. Why? For example, the machines that coat the oxides onto the base material are unique in this field — designed and built by Audio engineers who couldn't find commercial machines that met their rigid specifications. Then there's the

C-slot reel — fastest-threading reel ever developed. For that matter, there's the oxide itself — blended and combined with a special binder that eliminates rub-off.

There are many more reasons why the professionals insist on Audiotape. They know that there is only one quality of Audiotape. And this single top quality standard is maintained throughout each reel, and from reel to reel — for all eight types of Audiotape. That's what makes Audiotape the world's finest magnetic recording tape. For recording engineers, doctors, garbage men, investment brokers, sculptors... and plumbers!

very slowly. Special needs, such as vocabulary problems, can be anticipated, there should be pauses in the story to make meanings clear, and at the end of the presentation there can be desirable and necessary repetition of words to prod growing vocabularies.

It seems to us that parallel techniques for the presentation of more difficult material to advanced students can and should be developed. The bright child, dawdling through dull and repetitive material, is as seriously inconvenienced as is the slower child unable to maintain pace with his contemporaries.

Mrs. Russell developed similar techniques in spelling for her charges. A tape recording was made of particular words which the children had not mastered. A "ditto" sheet was made of the same list. For practice the child looked at the word—listened to the word and then traced the word on the practice sheet. The second step involved listening to the word, and writing it below the reproduced copy. Finally, the tape was used in examination procedure and the child was asked to spell as many words as she could on a blank sheet of paper. The child set the pace—and ample opportunity was given for review and repetition.

Although these children were unable to take the regular standardized spelling tests for their grade and consequently could not be too definitely measured, certain progress was evident. City-wide survey tests were used, and these children showed growth. The children were motivated to do better—they evinced an interest in spelling and a desire to improve their grades. Children were permitted to test their own progress at any time—by self administered examinations via the

tape recorder. Finally, this permitted the teacher to give these children special review and consolidation of learning experiences without taking time from the other students in the class.

In arithmetic for these children tape recordings were used to provide drill and examination in fundamental processes. A tape containing one hundred practice computations (addition, subtraction and multiplication) was made, and the listening children were supplied with answer sheets. Records were kept of scores.

A second tape contained practice and examination procedures together. The tape gave a fact or problem and time was allowed for response. Then the problem was repeated with the answer so that the child had immediate information of success or failure.

Practice tapes were used continuously—tapes offering both problem and answer and test tapes (problem only) were used at approximately ten-week intervals. Score comparison showed improvement. And again, this exercise provided an activity which an individual or group of children needing specific additional training could carry on without immediate teacher direction.

Similarly, these specially prepared tapes were used in literature appreciation instruction. The purpose was to help slow learners enjoy simple poetry—to permit them to learn at their own pace about a poet—and to increase vocabulary.

The tape recording used offered several poems by a particular poet. First, to motivate interest, there was a short biography emphasizing simple stories about the poet. Then, a poem was read for listening only. The poem was re-read—with the children encouraged to supply or to repeat the rhyme words. And finally, the children were encouraged to read the poem along with the recording.

Mrs. Russell suggests that tapes about particular poets be supplemented by tapes about some one particular interest. These interests can be seasonal, involve holidays and children's activities as well as animals and the variety of other areas in which children's minds dwell.

Many schoolmen will welcome the newest dimension in audio materials—the lending library. More accurately, a rental library, the LISTENING LIBRARY (10 East 44th Street, New York 17), is a new venture in supplying recordings for limited periods of time to schools and individuals for instruction as well as for entertainment.

Max U. Bildersee — box 1771, albany 1, n. y.

The Listening Library is founded on the premise that recorded literature is as much a part of our heritage as is printed literature. There is the added significance that the spoken word is a literary medium of communications parallel in importance to the printed word.

John V. Hinshaw, President of this new organization, says, "First writing, and then printing, gave permanence to language—man's only method of conveying his thoughts, his feelings and his past. But in visual reading the printed word, a whole dimension is lost. The eye, flashing across the page, cannot 'hear' what the author has to say. It cannot distinguish the varied and colorful meanings which auditory expression gives to each word. Only through speech is the full depth of literature attained."

The Listening Library is a membership organization entitling participants to rent records listed in the catalog, purchase rental records at reduced prices or purchase new records and tapes at special discounts.

The State Education Department in New York has added a new facet to state-wide examinations in **COMPREHENSIVE MUSIC**. According to Dr. Joseph G. Saetveit, Supervisor of Music Education, this entirely new music examination was prepared and given "with a view of spotlighting the musically gifted and talented high school students."

The examination is given in two parts. Part I consists of the audition of a musical performance. These auditions are recorded and are submitted

for review by state officials. The written portion of the examination, accounting for seventy-five percent of the grade, includes a phonograph recording to be heard by the participants. Certain musical items are furnished on this disc recording. The instrument used to play the items was an organ.

Here are new uses for both disc and tape recordings worthy of note which may have further significance in a variety of other examination procedures, particularly in languages and in other facets of communications. How else, for instance, to examine students over a large area in speech or in oral composition? The implications of this procedure for examinations are tremendous.

The first simple and satisfactory device we have seen for finding the right spot on a tape recording is the **DATREL TAPE INDEX** (156 North Franklin Street, Hempstead, N. Y.). Basic to the system is a set of numbered tabs which are quickly and easily applied to the shiny side of the tape, and which remain indefinitely or until removed. Made of Mylar, they last as long as the tape and are not injured or removed under ordinary usage.

School personnel will find many immediate and valuable uses for these tabs. They can be used to mark special portions of available tape recordings—to indicate particular music needed for instruction, illustration, or other purpose. Here is a boon to the teacher who wants to cite a particular phrase

QUALITY FIRST!

MRS. MARY LOU PLUGGE, *Chairman of the DEPARTMENT OF SPEECH AND DRAMATIC ARTS AT ADELPHI COLLEGE in New York, finds her NORELCO 'Continental' tape recorder an essential tool in speech instruction. Here MRS. PLUGGE illustrates, to her lovely student CAROL SAMISCH, the proper way to produce a sound. MISS SAMISCH, in turn, repeats the sound into the tape recorder so that she may listen to an accurate reproduction of her own voice and compare it. Says MRS. PLUGGE, "My NORELCO tape recorder is valuable to me for a number of reasons. There is an impressive tone quality in its reproduction of sound. Concurrent with this is the aid of the mechanical pause button which allows me to stop to analyze progress without turning off the machine. The control over recording is such that the possibility of accidental erasure is completely eliminated." The NORELCO 'Continental' is a product of North American Philips Co., Inc., High Fidelity Products Division, Dept. 1S1, 230 Duffy Avenue, Hicksville, Long Island, New York.*

in a recording — accurately, smoothly and quickly, for she can use this index system without fear.

We hope this will lead to something quite different, too. Many audiovisualists make extensive use of visual illustrations in the course of talks. They supply the audio. Now, with this indexing system, they will be able to pre-select audio illustrations on tape, spot them simply and accurately and use them effectively for group presentation.

The implications for instructors of this new indexing system are many. In language laboratories they will have application in the selection of materials to be heard by students. Similarly, the English teacher using the same equipment can immediately offer a particular poem, or soliloquy, or other excerpt from longer recording. The speech teacher has at her hand immediate reference to particular students who make recordings. No longer must she "change reels" for each student because she can now quickly apply the tab (it can be done while the tape is moving, it is just that simple!), make a note of number opposite the name of the student and record.

Are you using the recorder in your teacher training program? Are you

asking students to record whole classes? Then, in rehearsing you can "tab" a spot which you want to review. Thus the practice teacher can rehearse her own performance in the classroom — and make immediate notation of portions of the lesson which should be heard by the supervisor. Similarly, the supervisor upon hearing the recording can quickly and easily "spot" the portions of the lesson which should be reviewed with the student teacher.

Are you keeping more than one title on a single roll of tape? The applications here are obvious. Do you want to assign individual or small group listening to a particular portion of the tape recording? No longer do you fumble with the machine trying to find the right spot — but rather you can assign listening "beginning with tab number 3 and continuing until you reach tab number 5." And, to make things still easier and still more practical, the tabs are color coded!

RUN — DO NOT WALK to the nearest post office, and write to STRATCO AUDIOVISUALS, LTD. (P.O. Box 1883, Grand Central Station, New York 17, N. Y.) for information concerning their newest audiovisual packet for the kindergarten-

first grade groups.

Entitled "Teaching Games," this particular recording comes complete with assorted visual materials which make learning fun. In addition to the record there are sets of pictures to illustrate the recording and to be used to elicit oral responses from the children. Also included are essential sponge-like tri-dimensional models. These are made of urethane plastic which is both light and durable. It is also non-flammable — we know because we tried to ignite a block! These models, by the way, are in a variety of colors.

The song games included in this exceptional total audiovisual teaching material are "I Can Dress Myself," "Safety," "Left-Right Directions," "Colors," "Days of the School Week" and "Shapes." The tri-dimensional and geometric shapes contribute the essential visual connotations to the words.

The record contains stories, three of which particularly are designed to challenge the imagination of the child and to develop imagery. These are told entirely in sound effects and are subject to the interpretation of the listener. They are based on typical childhood experiences including an outing at the lake, a summer storm and a circus parade.

TEACHING GAMES is accompanied by an exceptionally complete manual for the teacher. This is NOT designed to do other than suggest possible applications of these teaching materials in the lowest grades. The music recorded is entirely original and is suited to the listening abilities of the youngest children. All in all — this is an exceptional audiovisual teaching packet.

Things are happening in the AUDIO of audiovisual education. City school systems are emphasizing listening, language laboratory techniques are used for exceptional children, rental services for disc recordings are being established, tape index techniques are developed and, finally, a whole audiovisual unit for the lowest grades designed to appeal to sight, sound and touch is offered.

And more will happen. Recording demonstrations are being organized on an area basis. The audio of audiovisual education is enlarging its sphere of action as teachers and administrators recognize that although, as Mark Sullivan said, "A picture can tell more than a page of text" (OUR TIMES, Volume I, Page 399) a page of text can conjure a thousand pictures and the mind oriented to audio, practiced in listening, sees the word, hears the meanings and thereby creates the audiovisual image essential to learning.

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

## Give Them a Chance

(Pennsylvania State University, University Park, Pennsylvania) 12 minutes, 16mm, sound, black and white, 1957. \$60.

### Description

This film surveys the curriculum experiences of mentally retarded pupils and shows how the children learn and react in a setting which is adapted to their needs. It explains the objectives of the program for retarded children and points up the values inherent in the types of activities which are afforded these pupils. The role played by a competent and understanding teacher is shown throughout the film by subtle implication. The thesis of the film — that mentally retarded children can succeed if given a chance — is developed.

As the film opens a boy comes into a classroom marked "Children's Workshop." Upon following him inside one sees nothing unusual about this particular classroom and its occupants, but the narrator explains that these are mentally retarded children who must eventually become self-supporting citizens in spite of their handicap. Their chronological ages range from seven to thirteen years while their mental ages range from three to nine years. These pupils require much longer to learn what other children achieve in a few years.

The group and the teacher are shown as they prepare to study number work. The children group themselves into study groups and begin to work with visual and manipulative materials in learning to tell time with a mock clock and to count with the aid of a flannel board. Children help one another while the teacher gives individual attention and encouragement to a child who is learning the concept "3+2" by manipulating sticks. The narrator explains that most of the learning at this level is by association.

In a reading group, children are using written and pictorial flash cards at a table while they make a game of word-recognition. At another level, a girl volunteers to read aloud to her class. The narrator points up the courage that is required to perform such a task, while the girl is shown as she reads, occasionally glancing around to draw psychological support from her understanding teacher.

Continuing the survey of the curriculum experiences, the film shows boys deeply absorbed in their work and obviously receiving pleasure in their accomplishments. During the art period, attention is focused on a little girl as she paints with broad sweeping brush strokes of unrelated colors, while she curiously watches the unfolding and obliterations of the shapes and

forms of her own creation. She is beginning her acquaintance with art materials and with creativity that heretofore held no interest for her. Views of girls sewing show that they are relaxed but attentive as they practice manual and social skills. Meanwhile others are working individually on their own special projects, and the teacher is helping another girl on a

## DEPT. OF OBSTETRICS PROUD FATHER DIV.

We're fond of this photo that we took in one of our familial moments and thought you might like it too.

Occasion: addition of the tenth baby to the films that we have been making to correlate with the text series, *Heath Elementary Science*.

Speaking of producing correlated films, we don't know whether to weep quietly or giggle. Every producer is a producer of films correlated with *Heath Elementary Science*, or so it seems from their literature. No matter if *Our Misunderstood Friend*, the *Weatherman* was produced seven years before the Schneiders wrote that chapter on weather, it Correlates.

What's the phrase? *Sic semper semantics?*

We keep thinking we should jump up and down with small cries: "absolutely genuine . . . collaboration with authors and publisher . . . 100% wool . . . no preservatives added . . ." Maybe we would be consoled if, like the others, we could turn around and advertise that our films are really also correlated with the Ginn series. Can't do that. 100% wool, you know.

We've been rambling about in this column for six months now, obedient to the American folk lore that says we must advertise. We happen to hate advertising, hence our relaxed approach. But do others share our feelings sufficiently to have read this column this far? We don't know but *we're going to find out*. We have 24 slightly used prints of one reel subjects that we are going to *give away* to the first 24 directors of established A-V libraries who write to us. Titles: *Plants Make Food*, *The Clothes We Wear*, *Pipes in the House*, *Wonders of Plant Growth*. Look them up (EFLA cards, H. W. Wilson, etc.) and tell us the order of your choice.

No hox tops. You can write us a 25 word essay beginning, "I hate advertising because . . ." But you don't have to.

CHURCHILL-WEXLER  
FILM PRODUCTIONS

801 N. Seward St., L.A. 38, Calif.

difficult task.

During a period when her help is not needed the teacher is shown at her desk keenly observing her pupils and recording notes for future reference. Her attitude exemplifies her devotion and concern for the pupils and their development.

After a field trip, which is not shown, the pupils prepare their summaries as they are individually inclined to express themselves. A boy who is larger than his classmates is shown as he experiences keen fascination in the discovery that he, too, can make a scrapbook of artistic creation.

Within the sequence of scenes, children show their reactions in various ways. Some work deliberately, some with the joy of discovery, some observe and strain for meaningfulness, and yet others seem to plod along according to plan. Group planning and participation are inherent in many of the experiences—the class decided to decorate the covers of their scrapbooks with spatter-paint designs, and they are shown as they enthusiastically engage in the work of making their own distinctive spatter patterns.

The closing scene shows the teacher and the class enjoying singing as they use gestures to interpret words. The camera pans the group as the narrator points out the values of such activity and the practice of tolerating individual differences and differential standards of performance in these kinds of activities in order to encourage participation and build confidence of withdrawn children.

### Appraisal

*Give Them a Chance* effectively pleads the case for special education of mentally retarded children. It is sympathetic in its treatment but not unduly sentimental. Teachers-in-training and teachers will find this film useful in focusing their attention on the problems of slow learners. Parents can gain some idea of the kinds of experiences that are provided children who can not successfully adjust to the ordinary classroom procedures.

The technical quality of this film is not excellent, but its treatment of the subject matter compensates for this inadequacy. All scenes are photographed as ordinary action shots, and some of its close-ups are very effective in portraying emotional reactions of individual pupils.

—William A. Wheeler

### Life of the Molds

(McGraw-Hill Text-Films, 330 West 42nd Street, New York 36, New York) 21 minutes, 16mm, sound, color or black and white. 1958. \$165 or \$85.

An Affiliated Film Production sponsored by the Charles Pfizer Company. Teacher's guide available.

### Description

This film shows that molds are both destructive and beneficial to man. It uses cinephotomicrography, some of which is time lapse, to show various phases in the life cycle of molds.

Opening drawings depict the 1845 ruination of the potato crop in Ireland followed by the famine in which a million died and a million and a half lled—a disaster caused by tiny molds.

Next, the film tells that today we know much more about molds and recognize a hundred thousand species ranging from the tiny *Penicillium* to the large mushroom. It then shows, by time-lapse photography, mushrooms pushing through the ground and growing to full size as the narrator tells that molds lack chlorophyll and thus cannot manufacture their own food.

The next scenes picture the underground "white threads" of the mushroom then by time-lapse photography show the bread mold hyphae as it grows and advances eating a pathway through the food. Speeded-up photography shows the spores bursting, the growing hyphae emerging and the development of the stalks with the spore containing sacs at their tips.

The film then pictures the destruction of grapevines in France by the powdery mildew and shows that the asexual spores of the powdery mildew are formed in chains rather than in sacs: It continues by telling that molds can reproduce very rapidly, and thus, in a short time, can completely devastate such hosts as grapevines and potato leaves.

The next sequence begins by explaining that the spore sacs of the potato blight need to be flooded with cold water before the spores can germinate. It shows the emergence of these spores from their sacs and pictures another type of spore developed from a sexual union and highly resistant to the rigors of winter and drought.

The film then shows by cinephotomicrography the details of the sexual process in molds. It shows the hyphae of Sex A growing toward a spore of Sex B, surrounding it, and finally fusing with it. The narrator points out that the union results in spores that have the characteristics of the two parents. The film then shows the spores germinating and pictures the mat formed by the rapid growth of many hyphae.

Next, the film shows that molds not only devastate such plants as elm trees, rose bushes, grass, wheat, corn, and rye but some molds also kill animals for food. It pictures the coiled hyphae

of a mold closing around a nematode which is then digested and absorbed into the mold.

The film continues by showing the protoplasm streaming within the hyphae as the narrator tells that this is the delightful process of life itself—a living test tube. The hyphae send out enzymes which change the food into chemicals that the mold can absorb and use for its growth and development. The film pictures the molds from which we get penicillin and terramycin and explains that the chemicals coming from the hyphae are used in the production of antibiotics. Drawing and live-action photography show briefly the large scale commercial production of antibiotics.

That many medicines are made from molds including those used to combat pneumonia, meningitis, tuberculosis, syphilis and trachoma is indicated as a use of molds. Another use for molds is in genetic research. Certain traits of molds can be examined and combined according to a plan and the individual spores can be isolated and examined under a microscope. Another advantage of using molds in research is that they produce many generations in a few hours.

The film concludes with the thought that molds are destructive but they are also beneficial to mankind and they are helping scientists to learn more about the nature of life itself.

### Appraisal

This film elevates the "lowly" mold to its rightful position of importance as a friend and foe of mankind. The opening scenes of destruction and famine dramatically point up the economic importance of the seemingly unimportant, commonplace, mold. Later scenes, however, show that molds are beneficial to mankind as well as destructive and the beauty of the "repulsive" mold is captured by the excellent time-lapse cinephotomicrography. The film presents important facts and principles in a fascinating and stimulating manner: spores emerge from their sacs to germinate and become a tangled web of hyphae; the coiled hyphae of a mold capture a nematode; hyphae and spore unite in a primitive sexual union. This film will have a wide age range of audiences. It will be useful in junior high and senior high general science and biology classes and will also be a useful teaching tool in college biology, botany, and microbiology classes. Even those who have had little or no biological science background will find this film both exciting and informative.

— George Vuke

### Problems of the Middle East

(Atlantis Productions, Inc., 7967 Sun-

set Boulevard, Hollywood 46, California) 21 minutes, 16mm, sound, color or black and white, 1958. \$200 or \$120.

### Description

This film depicts the history and culture of the Middle East area from antiquity to the present resurgence of nationalism and unrest. Its emphasis is on the anthropological approach as a key to the understanding of the varied and complex issues involved in this troubled area. Four main problems are presented and analyzed: the place of minorities, the area's agricultural need and potential, the rise and impact of western technology and industry, and, lastly, the role of education.

The first section portrays in graphic detail the whole Tigris-Euphrates—Fertile Crescent panorama—citing the successive influences of the Semites, the Romans, the Moslems, and the Christians. The film also describes the Armenians, the Kurds, the contemporary Israeli, the Lebanese—four distinct ethnic groups, each treated in terms of its origins, history, culture, language and of its influence upon the current Middle East complex.

The next sequence tackles the problem of agriculture, with emphasis on the ubiquitous need of adequate water and the technology needed to alleviate

Founded 1930

this age-old dilemma. Furthermore, the urgency for land reform is reviewed and the film stresses the need for abolishing the old feudalistic system before the area can fully realize its true potential. Competition between the United States and the Soviet Union in offering technological assistance is sharply stressed, and the film warns that this aspect of the cold war must not be underestimated or ignored.

The third crucial area delineated by the film is polarized around the problems arising from the impact of the industrial revolution and modern technology. Two questions are raised: how can this most strategic and historic area be industrialized without upsetting the indigenous customs and mores, and how can this be achieved without the debilitating and corrosive features of westernization?

The brief final sequence is concerned with the necessity of education in helping ameliorate the backwardness of these dynamic Middle East people.

**Appraisal**

Few subjects are more complex and more inexhaustible than that of this film. Its main purpose, to acquaint the viewer with the historical and anthropological backgrounds of the Middle East is well realized. Thus the film makes a valuable contribution to senior high and adult education levels. Particularly well drawn out is the present Arab dream of an Arab world stemming from the Islamic empire of the Middle Ages and the unifying factors of a common culture, language, and religion. In contrast, the sequence on the educational needs of the Middle East is most inadequately developed. Perhaps this lack, as well as the too briefly exposed maps, will be cared for in the reading and discussion which surely must follow the showing of this well-conceived and colorful film.

— Robert B. Pettijohn

1056 So. Robertson Blvd.,  
Los Angeles 35, Calif.

The film title fades away to a notice on the chalkboard of a high school classroom stating that the Press Club will meet at three o'clock when Miss Alton will announce the new editor-in-chief of the "Southwest High Banner." As the students begin to gather they speculate about who will be chosen. The most likely prospect is Bob Stevens, who soon has a cluster of friends around him extending congratulations in advance. Ben Curtis appears in the doorway and immediately the conversation turns to him. No one would choose him as editor although Betty admits he makes good grades and writes well. Ernie, a good-natured, likeable extrovert, is not so sure, though, that he wouldn't make a good editor. In spite of others' opinions he maintains that Ben Curtis is "nobody's fool" and "has real talent." Bob wonders that Ben isn't ashamed to associate with "people like themselves." His clothes are so poor, he is so awkward, and he comes from such a poor family. In his thoughts he remembers Ben's mother as a "lousy worker" when she used to do housecleaning for his mother and Ben's father as never holding a job longer than "to buy a bottle."

The entrance of Miss Alton brings the speculation to a climax. Bob wants the job and wants it badly. As Miss Alton talks he reviews the qualifications of those who might be chosen and confidently eliminates all others except himself. The appointment of Ben Curtis instead is a bombshell, an incredible decision based on poor judgment.

Not only is Bob surprised at the turn of events. Ben Curtis is even more astonished. A flashback to the time he enters the meeting reveals the reasons for his reaction. True, his clothes are old and worn, not new and "sharp" like those of his fellow-students. He is aware of the difference between himself and the others. As he stands uncertainly leaning against the door he surmises that the others are laughing at him. He does wish they liked him. Perhaps he should just go over and say something friendly—but no! That Ernie Davis would probably just make fun of him. One stu-

lent approaches and suggests that it may be he — Ben — who will be named to the coveted position. In Ben's mind his student also is making fun of him. He seats himself as Miss Alton enters and begins to speak. Ben is sure Bob will be selected and hopes that Bob will give him a chance — it wouldn't have to be a very big job. Then, somehow, there is applause and Miss Alton is asking *him* if he will come up and take over. Slowly gathering courage he waddles his way to the front and begins to assert himself in the new role of a leader.

Miss Alton stands quietly to one side. Through a second flashback to her entrance we glimpse her viewpoint of Ben and his capabilities. This has been a difficult decision. She pauses a moment and surveys the situation. It is apparent that Bob expects the appointment, yet Ben Curtis is the best person for the task. Not only is he intelligent and an expressive writer but he takes his work seriously. Addressing the group she explains that since she was asked to make the decision she assumed they wanted it made on the basis of merit rather than on personality only. She hopes her choice will meet with their approval, and to end the suspense she presents the new

editor-in-chief of the "Southwest High Banner," Ben Curtis, asking him to come and take over the rest of the meeting. As she steps aside she wonders again if her decision was right. She is certain that Ben is qualified but will he associate with the other students and allow them to get to know and like him? Perhaps this new role will be the very thing that will help him.

The narrator ends the film with some pertinent remarks while a series of opposite personalities is shown — the physically attractive and the physically unattractive; the shy one and the aggressive one; the soft-spoken individual and the "loud-mouth." It is pointed out that all of us have ideas about people who appear different than our friends, and several questions are posed. Do you really understand Ben and the reasons for what he does? What about his attitudes toward the others? Was he always correct in his judgments of them? What about Miss Alton's decision? Did she do the right thing?

#### Appraisal

The best use of this film is probably in guidance on the junior and senior high school level (1) to set students thinking about why people do things

and (2) to promote tolerance of others' behavior. It may, however, also be helpful in college education and counseling classes (1) to demonstrate a situation which may be similar to one encountered in the field and (2) to show prospective teachers their responsibility to the "whole student" in certain decisions which sometimes need to be made. Constructed to stimulate discussion, a simple situation is developed to point up the problem but not to solve it. One evaluator feels that the repetition of the key scene from three points of view is boring, but the other evaluators feel that the setting will catch attention and that the treatment of the characters is objective and will encourage understanding rather than antagonism. The teacher may find varied uses such as prior to school elections since broad problems are implied like (1) the popularity with the group vs. the ability to perform a task competently; (2) the existence of class distinctions and discrimination in public schools; (3) the bases of acceptance into a group based on both family background and personal characteristics; and (4) the reasons for misunderstanding others are both personal and group oriented.

— Jean Holt Moore

# AV IN THE CHURCH FIELD

by William S. Hockman

## A Study In Perspective

by LeRoy Ford

Production Supervisor, Audio-Visual Aids Department, Education Division, Sunday School Board, Southern Baptist Convention

"Linear perspective" is defined as "perspective by which a true picture is produced . . . from the actual dimension of the object. . . ." Let's take a look at the true picture and actual dimension of our progress in utilization of audiovisuals in religious education. Here's the picture as it appears after a study of film utilization in 146 churches.

1. A motion picture is used in one class session out of every 2,103 for young people and adults. (Figure 1) The 146 churches surveyed represented 3,681 classes. In one month's time, 14,724 class sessions were held. Motion pictures were used a total of 7 times. Now, if a teacher can stick it out for 40 years, he would use a motion picture one time.

2. One filmstrip was used for every 156 class sessions for young people and adults. Filmstrips were used 94

A motion picture is used in one class session in 2,103.

times in the 14,724 sessions.

3. Only one church in 146 (.7%) uses films oftener in the classroom than any other place.

4. Seventy-two percent of the churches used films more in assembly periods than any other place. Thirteen percent used them more in mid-week meetings; 5 percent used them in Men's meetings; 5 percent in Women's meetings; 4 percent in other meetings and less than one percent in the classroom. (Figure 2)

5. The larger the church the greater the feeling that available films are generally too long for effective use. Fifty-two percent of the churches considered the films too long. Other opinions are shown in Figure 3. Thirty-five percent of all churches

think films too long.

6. Thirty-two of 146 churches did not own a motion picture projector; 108 owned only one; 5 owned 2. No church owned 3 projectors.

7. Twenty-four of the 146 churches did not own a filmstrip projector; 87 owned one; 9 owned 3; no church owned over 3.

This study was made from reports from churches of all sizes. The number and size of the churches is shown in the following table:

Membership of Church	Number of Churches reporting
Below 500	12
500 to 999	42
1000 to 1499	42
1500 to 1999	25
2000 and over	25

Here are the conclusions reached:

1. Present films seem to be designed for everything but the classrooms—the classroom period is the core of our teaching program.

2. The study shows a trend in religious education toward smaller classes—enrollment wise. It is not uncommon in the Southern Baptist communion for a church of 1,500 members to have 25 adult classes.

Where motion pictures are used most in religious education.

In larger churches, a greater percentage considers the average film too long.

Some churches today have as many as 15 classes for adults alone! Even the smaller churches may have 4 to 8 or 10 classes for adults. Similar trends are noted in other age groups. Is there any way for distribution of equipment and materials to keep pace? In the light of this trend, mass utilization on the classroom level is not possible if present conditions relating to costs of equipment and materials continue. In short, the trend (and it's already here!) toward more and smaller classes must be met with more and less expensive equipment and materials.

3. Shorter films — (8 to 10 minutes or less) are needed. For example, 20 minutes is the generally accepted length of a department assembly program. If these are true worship periods, the programs are to produce awareness of God, contemplation, conviction, resolution, decision, and power to act. It is generally accepted that group participation through singing, prayer, and scripture reading, is an integral part of worship. A 20 minute film in a 20 minute program leaves no minutes for other activities. The class periods are generally around 45 minutes in length. A 20 or 30 minute film, plus administrative ac-

tivities, leaves little time for the teacher to be before his class.

## Home and Family

How can a family get the job of group-living done so that every one grows and develops while contributing to the community of satisfactions all of them should experience?

The 68-frame color and sound filmstrip, *As One Family*, searches for some of the answers. It finds the family council helpful. Not the frozen and rigid type, but the flexible, informal variety. It finds that crises, little and big, are best met when they arise, and it suggests that almost any family can have some time during the week for activity as a family if it will try.

I liked this filmstrip. It has naturalness. The commentary has a bit of sparkle. It has no trucking with the fancy jargon of the professionals. Its solutions seem reasonable and acceptable. This family seems to be wringing quite a bit of juice out of the lemon of life.

What bothers me is that many people who should see it will not. It belongs in the school PTA meeting; in the church family night program; be-

fore the young couples club of the church; and on the agenda of the youth fellowship. Yes, young people should see it. It will hold the mirror up to them, and not distort what they see. It can stimulate them to profitable discussion on just what it is that they want from their homes and are willing to put into them as well.

If given a content and setting, and then followed by some kind of discussion, it is highly recommended. From Church of the Brethren, Elgin, Ill.

## New Slant Here

It is about time that we begin producing filmstrips on the Old Testament materials which imply the findings of critical and historical scholarship. This will deliver us from the wooden literalism that has plagued much of this material to date.

*How The Old Testament Came To Be*, 67 frames of good color art by George Malick and well-written commentaries by Carl E. Berges (for adults) and Carolyn Goddard (for children), tells how some of the O.T. writings were first recorded. It explains the urgency which the writers felt, and shows how the writings were collected

*Family Films*

offers:

**A COMPLETE FILM AND FILMSTRIP PACKAGE FOR NATIONAL FAMILY WEEK MAY 3-10**

*For Little Children*

**"Stories About Home and Family"**

(4 color filmstrips and records, \$19.50)

Delightful stories to help the little child learn about God's plan for a home and family.

*For Older Boys and Girls*

The "Our Children" series of discussion films will help boys and girls put Christianity into practice at home.

13 motion pictures, color or black and white  
Rental, \$5.00 and \$8.00

*For Young People and Adults*

**Christian Home and Family Life Kit**

and proclaimed to be sacred. The composite nature of the O.T. is touched in very brief explanations of how the "J", "E", and "D" documents came about.

This is a good and useful resource for young people and adults. It can be used with profit in college and seminary courses. Its greatest use will be with our church school teachers. It can orient them so their teaching will be more in line with scholarship and less with dogmatic literalism.

Equally good and useful is *Spokesmen For God*. This introduces us to the life and work of Elijah, Micah, and Haggai. Frances Eastman does the script for adults and Oscar J. Rumpf the one for children. Both are well-written and adjusted to the needs of these two audiences. For it Harold Minton has turned out 73 frames of his excellent art.

Both are highly recommended for use by teachers and the teachers of teachers in church and college. Both are available from Christian Education Press, 1505 Race Street, Philadelphia 2, Pa., and the price is \$5.50, including the printed script.

## Child-Choose Theory

In his "Helps-For-The-Month" bulletin for the First Quarter of 1959, editor Paul G. Kiehl takes a whack at the let-the-child-choose theory of teaching. "In the use of visual aids," he says, "It shows itself in different ways. We must produce and show audiovisual materials which entertain the child, because he likes to be entertained."

He goes on to observe that we want it to have a moral point but we need to slick up the job so the child is entertained. That is certainly a silly thing to waste our money on when making films and filmstrips for educational purposes.

How long will it take us to learn that our money is better spent structuring our materials to make them interesting. By this we mean having the quality which is needed to hold the attention and make them easy to understand. Easy to understand, they are easy to think about; and this is a central phase of the learning process.

When a film or filmstrip is interesting it can be seen profitably several times without any one getting bored. Thus, we are free to use good materials over and over; to wring the educational juice out of them time and time again without their coming apart in our very hands. Paul is right; this clamor for what's new and for what's entertaining, is a theatrical

inheritance. It has tended to persist because so much of our educational AV material has been made by those having their deepest orientation in entertainment and not in education. Let's have some re-orientation for all those in both production and use who have not seen the new light.

## S.O.S.

The line that reaches from the abundance of America to the privations of many people can easily be called "lifeline." This is the reason the 77 frame B&W sound filmstrip produced by the Broadcasting and Film Commission for Church World Service and its cooperating denominations was given the title *Lifeline*.

This fine filmstrip tells just what the Share Our Surplus program is and just how it depends upon money from the churches to keep our surplus moving. And how much can be moved by how little - One dollar will move up to 300 pounds of life-giving food to the hungry in typhoon-blasted Japan, quake shaken Greece, teeming Hong Kong refugee-choked West Germany, or hurricane-devastated Haiti, and so on around the world. Here, in 15 minutes the story is told, with pictorial eloquence and realism; in moving words and stirring ideas.

This is the filmstrip which the churches will need to interpret the S.O.S. program and the One Great Hour of Sharing offering this year and next year, and in all the months of the year. Recommended for Juniors and up. Below that, the user might wish to black-out certain frames and cast the commentary in his own words shortening it by half. Available from Church World Service, 215 Fourth Ave., New York 10.

## Series Completed

With the release of *From Ten to Twelve* and *The Teens* the "Ages and Stages" series of six films by Crawley Films for the National Film Board of Canada, is now complete. Their basic availability in the U. S. is through McGraw Hill, Film Text Dept., 330 West 42nd Street, N.Y. 36. Inquire as to rental rates.

This series begins with the 13-minute *He Acts His Age*. It shows us a group of children at a picnic. Via an acutely observant camera and a perceptive commentator we become quite aware that every one is acting his age. It's an excellent introduction to the series, and helps to

sharpen our powers of observation for those to follow.

In a nursery play-yard we see the *Terrible Twos* and *The Trusting Threes* in action: playing, fighting, exploring, learning. The teacher is active, too, but much less so than many 'busy type' teachers and parents will expect. In 20 minutes those having eyes to see with can fill their heads with much to think about.

Roddy is our *Frustrating Four* and *Fascinating Five*, and we see his zig-zag course of behavior through kindergarten and home; first as a four year old, and then as a five year old. This gives us a depth view of one child. It's very revealing. What a difference one year can make!

In the Arden's home we find our *Sociable Six* and *Noisy Nine* children: Betty, six, and Sandy and Pete, eight and nine. The candid aspect of all these films is little short of amazing. Surely they knew the camera was looking in on their doings! But naturalness marks every shot so profoundly that we never think of the children as acting. They are living for us, and to the hilt, whether getting on or scrapping. Again, what lessons parents and teachers can learn from such a film.

*From Ten To Twelve* gives us many realistic examples of typical behavior patterns of the pre-teenager. More of an individual now, he is full of dynamic ways. Emotional currents begin to mark his behavior. The film helps us to see the ages and the stages of the Jones children, and to appreciate the emotional field which polarizes around this family group which is headed by a rather sensible set of matured parents.

For our view of *The Teens* we go to a middle-class urban family: Joan, well on the way to maturity, is fifteen; Barry, fourteen, thrives on vigorous activity with his gang, while Timmy still needs solitude and shared hobbies which often mark the thirteen-year older. Our camera takes steady aim, and our observer is penetrating in his comments on what we see. Thus we learn a lot, if our minds are open, and we like it.

The last two films are 26 minutes each, and the other three about 22. They seem much shorter! At this length they give plenty of time for a discussion follow-up. Of course they would make a superb series for church school teachers and parents. And let me urge that all the films be shown to the same audience, not just on an age-group basis. One weakness of many teachers is that they never knew, or have forgotten, what the pupils they teach were like in

earlier stages of growth; and fail, also, to appreciate just what they are headed into. The same for parents.

Think of the money you can save if you will use this series rather than secure the services of a speaker or speakers! In honoraria for people as competent as these films you would pay out five times the total rental for the series. Let me urge you to preview them, and then use them with teachers, with groups of parents all across the life of your church. Religious observations are not made. That we can supply easily in their utilization. Highly recommended.

## A Useful Trinity

The Society for Visual Education has just released three sound and color filmstrips in its "How We Got Our Bible" series. The target audience for the series is 5th grade through adult. The commentary was narrated by John Mallow, with good over-all effect, for LP (33-1/3 rpm) records. The filmstrips were authored by Doris Clore Demaree, and Venida Jones composed the background music.

*Making The Old Testament* (41 frames; 12 minutes) illustrates the various steps in the development of Scripture, and how it was collected into "hooks" and became our O.T. In short, it seeks to answer three questions: what is the O.T.? what does it contain? and, why was it written, preserved, and collected into one book? Its answers are supposed to supplement general study, not substitute for it. In composition, color, and general conception, Mathilda Keller's art is very satisfactory. A good and useful filmstrip!

*Making The New Testament* (43 frames; 11 1/2 minutes) gives some of the more important reasons for the writing of the N.T. materials, relating the work, travels, and writings of men like Paul, and Luke, and Mark, and Peter to the N.T. writings. A fine overview, and very useful in the church's instructional program.

*The Bible: A Book For Every One* (48 frames; 14 1/2 minutes) tells how the Bible came down from the original Hebrew and Greek through many translations, revisions, and many hands to its present form. The work of Jerome, Bede, Wycliffe, Tyndale, and others, is briefly touched. We are told of the origin of the great English versions—Great, Geneva, Bishop's, King James, English Revised, and the RSV of our own time. In this, and the one above, the art of Esther Bell is good in conception and execution, helping the filmstrip to communicate.

# USEFUL!

## products for your A-V equipment

### SAFE-LOCK PORTABLE PROJECTOR CABINET AND STAND

All steel, 42" high, 29" x 17" plywood top with safety rail. Gives over 11 cu. ft. for storage of projector, speaker, etc. Adjustable shelf. Safe-locking panel door. Four 3" casters, two with brakes. Baked enamel finish in tan or gray.

Model No. 42

### PORTABLE STEEL PROJECTION STAND

Four 3" casters, two with brakes. Height: 41". Stable, tapering design (19" x 31 1/2" at bottom) 18" x 26" at top. Rail on 3 sides. With non-skid rubber shock-proof mat. All steel, with 1/2" tubular steel frame. Baked enamel in tan or gray.

Model No. 41

### TAPE AND FILM CABINETS

For every need . . . 5" or 7" tapes, film strips, slides. Cabinets are all steel, with full suspension drawers. Photo shows each type of cabinet stacked on handy Mobile Cart.

## NEW EQUIPMENT

### Viewmaster Turns Schoolmaster

The well-known Sawyer "Viewmaster" 3-D color picture reels have now been adapted for classroom use in a novel correlation of projected image, individual 3-D viewing, illustrated primary grade readers, and dramatized recordings of the book content keyed to the projected picture sequence. Each unit comprises a) several picture wheels which can be projected in a low-cost 100-watt plastic projector (\$19.95), or viewed in any of the "Viewmaster" viewers; b) a 33 $\frac{1}{3}$  rpm two-side record; c) a nicely illustrated children's reading book; and d) a very practical teacher's guide printed right on the correspondence—manila folder that holds the unit together securely.

Sawyer's first eight subjects include four childhood classic fairy tales: **Goldilocks and the Three Bears**, **The Ugly Duckling**, **The Three Little Pigs**, and **The Sleeping Beauty**. Two on kindergarten-primary music **Rhythms and Sounds and Music**, include concepts applicable in higher grades. **Fun with Pets** and **Fun at the Zoo** complete the initial release list.

A screen (10 $\frac{3}{4}$  x 9 $\frac{1}{2}$ ") with folding shadowbox is available for intimate group showings. The projector accommodates all Viewmaster picture reels, such as children have long been receiving in their homes as gifts. Available at low cost, in great variety, and virtually indestructible, they constitute a most useful self-activation device for even the youngest. This "Viewmaster turned schoolmaster," tested in California and Oregon school installations, is about to enter the national market. Dealer inquiries are invited.

### Photo Copies in Open Class

A new system of physical photography permits copying of slides, motion picture frames or other transparencies right out in the open, under ordinary classroom lighting, without darkroom or chemicals. This Beseler-Kalvar "Slide-O-Film" is simply placed in emulsion-to-emulsion contact, exposed to light for periods varying from two seconds to several minutes, depending on the density of the intensity of the light source, then subjected to heat (two seconds in boiling water or about twice that long under a 200-degree flat-iron). If made from a negative the resulting positive is ready for immediate projection; if made from a positive the

Unit shown with "Viewmaster" viewer, 2-dimensional projector, and TV-size screen.

negative copy may be used for making contact prints or enlargements.

The film is on an exceedingly tough Mylar base, in 35mm rolls or 2 $\frac{1}{4}$  x 2 $\frac{1}{4}$ " sheets. A Beseler sample kit (25 cents to cover cost of mailing) includes a "Slide-O-Mount" printing frame for

copying in any 300-watt or 500-watt slide projector, film sufficient for six 35mm copies, and an instruction book. A handy box-printer is available.

Among suggested educational applications are the rapid in-school production of slides from black-and-white or Koda-

Beseler-Kalvar "Slide-O-Film"

color negatives; slide making by students to illustrate creative projects and classroom demonstrations; and production of negatives from slides or films for copies or enlargements. The Beseler Company has established a special Slide-O-Film Research and Education Department to help develop and popularize other educational applications.

# Looking for Something New?

HERE IS YOUR KEY TO THE  
AUDIO-VISUAL RELEASES OF 1957-1958

## The BLUE BOOK of Audio-Visual Materials

- films
- slides

the ONLY source-book that completely correlates  
all four principal types of instructional materials

- filmstrips
- recordings

**Costs Only \$1.00**

Not only does the BLUE BOOK tell you where to get 16mm films; it also tells you *where to get 35mm filmstrips, slide sets, and educational recordings.*

The new BLUE BOOK lists all these major types of teaching aids under the same subject heads. The listings include: title, type of material, length, silent or sound, color or black and white, television clearance, sale and/or rental price, primary source of distribution, release date, content description, and recommended age level.

The BLUE BOOK lists materials on virtually all subjects — agriculture, armed forces, arts and crafts, cinema arts, education, entertainment features in many languages, personal and vocational guidance, health and safety, home economics, industry, transportation, industrial arts, languages and language arts, literature and drama, mental health, mathematics, science (physical, biological, general, medical and allied), physical education and sports, social studies (geography,

history, anthropology, government, social problems) and many more. No matter what your field of interest, the help you're looking for is in the BLUE BOOK.

For more than 30 years the BLUE BOOK has been the desk-top reference and work-book of leading audio-visual education administrators. Its first 28 editions, revised annually, were cumulative, those following list only the new releases of their year. This year, again, the Blue Book issue lists, classifies and indexes the new offerings released during the past academic year. Every subscriber gets the BLUE BOOK — and a great many extra copies are sold for all-year reference use in film and other libraries. A-V administration offices, research and production centers, in short — everywhere that accurate release data is needed quickly, handily, constantly! *This makes the annual BLUE BOOK issue a doubly useful one for our subscribers — and, consequently, for our ADVERTISERS.*

### An Ideal Combination

To keep your BLUE BOOK up-to-date, each monthly issue of EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE now carries a special section of listings of new audio-visual materials presented in the same helpful format as in the BLUE BOOK. A year's subscription to the magazine costs \$4.00; the annual BLUE BOOK issue costs \$1 each; and the 28th (separate cumulative book) edition that makes your file complete is priced at \$2.00.

# HELPFUL BOOKS

**THE AUDIO-VISUAL EQUIPMENT MANUAL.** By James D. Finn. Published under the general editorship of Edgar Dale. 384 pp. 1400 illustrations. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$9.50.

**AUDIO-VISUAL MATERIALS: THEIR NATURE AND USE.** Revised Edition. By Wolter Arno Wittrich and Charles F. Schuller. 570 pp. 249 Illustrations, 14 Color Plates. Harper & Brothers, 49 E. 33rd St., New York 16, N.Y. 1957. \$6.50.

**AUDIO-VISUAL METHODS IN TEACHING: REVISED AND ENLARGED.** By Edgar Dale. 544 pp. Illustrated; and with 49 full-color plates. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$6.25.

**EDUCATORS GUIDE TO FREE SLIDE-FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Tenth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$6.00.

**EDUCATORS GUIDE TO FREE TAPES, SCRIPTS, AND TRANSCRIPTIONS.** Compiled and Edited by Walter A. Wittich, Ph.D., and Gertie Hanson Halsted, M.A. Fourth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.75.

**EDUCATORS GUIDE TO FREE FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Educational Consultant, John Guy Fowlkes. 18th Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$7.00.

**MITCHELL'S MANUAL OF PRACTICAL PROJECTION.** 450 pp. Illustrated and cross-indexed. Covers every aspect of motion picture projection. Material presented in easily understood language — not too technical, yet technically accurate. Most complete and practical handbook for projectionists ever published. International Projectionist Pub. Co., 19 West 44 Street, New York 36, N. Y. \$6.00.

**STANDARDS OF PHOTOPLAY APPRECIATION.** A Course of Study in Photoplay Appreciation, Including a Photoplay Approach to Shakespeare. By William Lewin and Alexander Frazier. Illustrated. Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey. \$4.75.

**A WINDOW TO THE CHILD'S MIND** — Alpark's New Educational Handbook by Dorothy R. Luke, 268 pp. The first authentic analysis of Helen Parkhurst's recorded interviews with children. An indispensable guide for teachers. 1955 Alpark Educational Records, Inc., 40 East 88th Street, New York 28, N. Y.

# Trade News

## Ideal News Record

A schoolhouse window on the news of the world is now provided in the form of a monthly recorded commentary on educationally significant events. These 15-minute vinylite recordings, authored by Forrest E. Conner, Superintendent of Schools, St. Paul, Minn., and Jack Allen, Chairman of Social Studies, George Peabody College for Teachers College, Nashville, Tenn., are accompanied by a teacher guide for history and civics class use. Broadcasting over the intercom for all-school use is another challenging application. The January and February issues have been very well received; there as a 50 per cent increase in subscriptions between the two first releases. Distribution is through 28 regional Ideal Picture libraries. Yearly subscription (9 issues) \$18. (Ideal Pictures, Inc., 58 E. South Water St., Chicago 1, Ill.)

## Sylvania CCTV Camero

Pilot production is announced on a new vidicon-type camera, weighing less than 15 pounds and designed as a standard unit expected to meet at least 85 per cent of all installation conditions without need for custom installation. Price will be determined after completion of the pilot production run, but it is expected to be well below that of most custom-designed systems currently on the market. In the opinion of Mr. Marion E. Pettigrew, senior vice president of the Sylvania Home Electronics Division, "One of the greatest areas of potential use is in local school systems."

## Technifax Schooling Continuous

Courses in practical visual communication ("Visucom" for short) continue throughout the year at the Technifax laboratories, Holyoke, Mass. Workshop courses, 3 to 5 days, are available without charge even for materials used, to qualified applicants desiring hard-core do-it-yourself instruction in diazotopy, photography, photocopying and design and use of visuals of all kinds. Write direct, indicating nature of your interest and work.

## NAVA Convention

The 1959 National Audio-Visual Convention, to be held at Chicago's Morrison Hotel July 25 through 28, will follow much the same pattern found so successful in recent years. NAVA's exhibits will be open Saturday, July 25, from 1 to 6; Sunday and Monday from noon to 6; Tuesday 9 a.m. to 1 p.m. Projector and other major equipment manufacturers will hold their sales meetings prior to the 25th. There will be no sales meetings or set group meetings of any kind during exhibit hours except after 5 p.m. Breakfast will be served at 8 a.m. Saturday and Monday, but without formal entertainment, in order that groups wishing to breakfast together may do so, in reserved sections of the Terrace Casino, where the general sessions will be called to order promptly at 9 o'clock. Three half-hour programs, featuring speakers of national prominence, will leave free time for sales meetings or other group functions from approximately 10:45 until not later than 12:30.

The religious worship service, at 11 a.m. Sunday, will be arranged and conducted by a committee of clergymen who are NAVA members, headed by Harvey Marks, of Denver. The Sunday afternoon and evening Religious A-V Workshop will be run as in the past by the A-V Committee of The Church Federation of Greater Chicago.

Other professional A-V groups meeting contiguously with the NAVA Convention include Educational Film Library Association, Association of Chief State School A-V Officers, Industrial Training Directors Workshop, Agricultural Audio-Visual Workshop, and A-V Conferences of Medical and Allied Sciences.

The exhibits are certain to be bigger and more varied than ever. Additional space this year will include the sizable Hollywood Room, which served as general office and press room last year, but even with this increase it is expected that every inch of space will be sold out long before show date.

Last year's innovation of having a NAVA officer on public relations duty at all times on the lobby floor was found so helpful that it is to be expanded this year to have a similar officer available in the exhibit halls and another at the registration desk to help with any problems encountered by either exhibitors or visitors.

This year's ladies' program likewise will follow very much along the lines developed in 1958, with hours fixed to permit also active businesswomen to take part in the ladies' social functions with minimum time taken from exhibit hours. The 2x2 color slides shown by co-chairman Gussie Kruse two years ago found so much favor that women visitors are being invited to bring along a small collection of their own favorite slides, not more than a dozen, for a "get better acquainted" program.

### Zenith Moving

Zenith Radio Corporation intends to move its Chicago street level display salon to a new location, the present IBM quarters at 200 N. Michigan. The purpose of the salon, like that of its New York counterpart (666 Fifth Ave.), is to give prospective buyers a chance to pre-shop the entire line before placing their order with the dealer of their preference. Harold Driscoll, formerly advertising manager at Bell & Howell, now holds that post at Zenith.

### Fifth Army Film Centers

Schools, etc. in the State of Michigan who desire to borrow Army films should send their applications to Film and Equipment Exchange, Fort Wayne Bldg. 308A, 6301 W. Jefferson Ave., Detroit 17, Mich. Similar exchanges in the Fifth Army are at Fort Sheridan, Ill. (Ill., Minn., Wisc., Iowa, No. & So. Dak.); Ft. Carson, Colo. (Wyo., Colo.); Ft. Riley, Kans. (Nebr., Kans.); Ft. Benjamin Harrison, Ind.; Ft. Leonard Wood, Mo., and for the St. Louis area—Film and Equipment Exchange, U. S. Army Support Center, 12th and Spruce Sts., St. Louis, Mo.

### RCA's Audio Roadshows

A series of presentation units will hit the road via station wagons, each manned by a sound technician and a professional public speaker, to tell RCA's story of recorded sound from the tinfoil cylinder to the stereo disk to service clubs and other group audiences. Club chairmen may apply for dates to RCA Shows and Exhibits Department, Camden 2, N. J.

### Heart-felt Film Plea

Dr. J. Edwin Foster, at the American Heart Association, knows from experience that no film program can be better than the condition of the print that goes into the projector. He has just prepared a little 12-page illustrated booklet, "Minimum Film Handling Equipment and Its Use," intended for agencies such as his own which maintain small film libraries and must do their own inspection and repair. It grants that better film service can usually be provided for small agencies by film handling concerns that make this their business, but where these are not conveniently available a lot can be accomplished with a splicer, rewinds and other minimum resources and know-how. The booklet provided much of the latter. Ed's address: 44 E. 23rd St., New York 10.

### Better Microfilm

Eastman Kodak announces an improvement in its microfilm positive that raises potential resolution to practically the 240 lines per millimeter of the original Kodak microfilm negative, as against the current 150 lines that dropped to about 80 after printing and processing. Better reading quality in roll film records of books and other library materials will result.

# Summer Checkup & Repair Time

**YOUR AUDIO-VISUAL EQUIPMENT HAS HAD 9 MONTHS OF HARD WEAR. NOW IS THE TIME TO CALL YOUR NAVA DEALER FOR CHECKUP, REPAIR, CLEANING, AND RECONDITIONING.**

Start the 1959-60 school year with all your audio-visual equipment in good shape. The summer vacation is the ideal time for your NAVA Dealer to give every projector, screen, tape recorder, and record player its annual going-over. He'll clean out a year's accumulation of dust and dirt, lubricate, adjust, and repair, assuring you a year of trouble-free operation and maximum effectiveness.

Call your NAVA Dealer now . . . tell him what date he can pick up your equipment. He's listed in the Yellow Pages, or you can get his name by sending in the coupon below.

National Audio-Visual Association, Inc.  
Fairfax, Virginia

Please send me your free directory of NAVA Dealers, coded to show services offered by each.

May 6-9 — Institute for Education by Radio-Television, Deshler-Hilton Hotel, Columbus, Ohio.

June 15-17 — Technical Association of Graphic Arts, annual meeting, Rochester, New York.

June 22-26 — Indiana University A-V Workshop, Bloomington, Ind.

July 10-11 — New York State Audio-Visual Council, summer meeting, Statler-Hilton Hotel, Buffalo, N. Y.

July 10-12 — Associated Amateur Cinema Clubs, Inc., Film Festival, Conrad Hilton Hotel, Chicago, Ill.

July 19-23 — National Institute for A-V Selling, 11th annual, Indiana University, Bloomington, Ind.

July 19-23 — Cooperative Conference on Instructional Materials, University of Texas, Austin, Texas.

July 20-31 — Annual Laboratory-Demonstration Workshop, The Betts Reading Clinic, Haverford, Penn.

July 25-28 — National Audio-Visual Convention & Exhibit, 19th annual, Morrison Hotel, Chicago, Ill.

Aug. 10-21 — Summer Audio-Visual Workshops, Syracuse University, Syracuse, N. Y.

Sept. 2-13 — North American International Photographic Exhibit, nineteenth annual: closing dates for prints July 24 and for slides, August 7. California State Fair and Exposition, Sacramento, Calif.

Sept. 28-Oct. 1 — Industrial Film and AV Exhibition, New York City.

Oct. 26-30 — Society of Photographic Scientists and Engineers, annual national conference, Edgewater Beach Hotel, Chicago, Ill.

Oct. 26-30 — National Association of Educational Broadcasters, Sheraton Cadillac Hotel, Detroit, Mich.

# 35 32

... a unique process pioneered by General Film in which a strip of 35mm film, perforated with 32mm sprocket holes, is split down the center to produce two 16mm prints of outstanding quality.

After successfully processing millions of feet of 35/32 black and white and color film we have observed many outstanding advantages and list a few: better sound quality, lack of roller abrasions in sound track area, the ability to use standard 35mm professional equipment, and the efficiency that comes from handling two prints in one operation. Negatives made on 35/32 film stand wear and handling of multiple printing much better than do 16mm negatives.

Additional information to help you apply these advantages to your own film needs is available on request. Ask for Bulletin G.\*

a new sound in sound projectors...

# PAN-HARMONIC SOUND

Now yours with all Bell & Howell Filmosound Specialists

ugged Filmosound Specialists are sapphire jeweled for 400% longer life. Choose from 3 models and many combinations of features!

Now, for the first time, the *audio* communicates as clearly as the *visual*. Bell & Howell's Pan-Harmonic sound offers new clarity and richness for sharper communication.

The vastly improved sound results from (1) a high fidelity amplifier, and (2) a newly designed speaker, *permanently mounted* in the projector case itself.

This permanent location provides *enclosed baffling* for superior fidelity and impelling realism. The location also insures *uniform distribution* of sound, forward and to the sides. Sitting high, at ear level, it projects sound *above* the usual obstructions

and reaches the audience directly.

Add to this the *convenience* of a clean and speedy set-up, for with an integrated system there are no wires to string from projector to speaker.

Thus, in areas of 2,000 square feet or less, the new *Filmosound Specialists* offer remarkably improved communication and convenience.

**Write for private audition**

Gentlemen:  
I would like to hear for myself, how Pan-Harmonic sound can improve our Audio-Visual communications.

*“Besides being a reader  
of LIFE, I’m a teacher.  
I mention this because  
LIFE has both  
personal and professional  
values for me.  
For example...”*

**As a LIFE reader—and a professional in the field  
of education—what examples would you give  
to illustrate the value of LIFE to you and your school?**

**Your answer to this question could be worth \$100.00!**

*If you'd like to add \$100.00 to the value  
of your personal library (in books of your  
own choosing) the Publishers of LIFE in-  
vite you to write them a short letter on  
the following subject:*

**“The Value of LIFE in our School”**

The Publishers are extending this special  
invitation to you and to all educators in  
every phase of education—from kinder-  
garten to graduate school—as part of a  
broad inquiry into LIFE’s impact on vari-  
ous areas of public and private life.

Your letter will be regarded as personal  
correspondence and will not be published  
without your consent.

*The writers of the five letters selected as  
best by the judges will receive*

**\$100 in Books**

of their own choosing.

In addition to these five Grand Prize  
Awards, the Publishers will present

**\$50 in Books**

to 20 Second Prize winners. The writers  
of the next 50 letters selected for Honor-  
able Mention will receive their choice of  
one of the following LIFE books:

**LIFE’s Picture Cook Book**

**LIFE’s The World’s Great Religions**

**LIFE’s The World We Live In**

To qualify for any one of these awards, your  
letter on “The Value of LIFE in our School”  
should be postmarked no later than June 30,  
1959 and should be addressed to:

**Mrs. Mary Johnson Tweedy**

## This Month's Cover

On our May cover we are proud to present a scene from the award-winning film "Bitter Welcome," which took the Blue Ribbon for the category *Mental Health and Human Relations* in EFLA's recent American Film Festival. The black and white sound film concerns the struggle of a former mental patient to regain his place in his community, and is presented by the Mental Health Film Board, New York City. For more details on the Festival, see pages 246-7.

## TV Controversy

In this issue, Philip Lewis explores the provocative possibilities of educational television, while carefully stressing the point (so often overlooked by some of this medium's detractors) that any mechanical method is only as good as the material it transmits. Next month, *Educational Screen & AUDIO-VISUAL Guide* will feature an article by Robert Diamond on the actual application of in-school television in the Plainedge School, Long Island.

During the months to come, this publication as well as others will reflect the widely varying opinions of educators regarding the teaching applications of television. One hears all sorts of arguments, most of them

backed up with statistics of some sort. Students like televised classes and learn well from them; they abhor them; they are boring time-wasters; they are completely indifferent. Now and then one learns of a college or school in which the goal seems to be as complete mechanization as possible—a horrifying preview of the worlds of Orwell and Huxley. But it is well never to lose sight of the fact that the ultimate success or failure of television or any other educational medium depends on the intellectual value of the material and the intelligence expended in its presentation.

## Special Issues

July will again be devoted principally to the National Audio-Visual Convention and Exhibit, to be held from the twenty-fifth through the twenty-eighth at the Morrison Hotel here in Chicago. In this issue, we will attempt not only to aid the visitor with regard to meetings, exhibits, and so forth, but to provide those unable to attend with an impression of the proceedings.

August is, of course, our annual Blue Book, a very important issue to keep for handy reference the year 'round.

# GRAFLEX®-SVE SCHOOL MASTER

## Filmstrip and Slide Projector

School Master 750 is shown with accessory rewind take-up and accessory semi-automatic slide changer.

True realization of the versatility of a School Master begins with its superb projection of both filmstrips and slides. The School Master gives you the most brilliant projection available in a classroom projector. It converts from projection of filmstrips to slides in seconds without tools or removal of parts. Operation and maintenance excel in simplicity. An exclusive built-in carrying handle provides easy portability.

But the School Master's amazing capabilities are

completely realized when the teacher fully explores the possibilities of the many accessories provided. Two important ones are illustrated and described below.

School Master Projectors are priced from \$84.50 and are available in 500 watt and 750 watt models, manual or remote control. Exclusive accessory Rewind Take-up which allows filmstrip to be rewound correctly into storage container without being touched by operator, only \$7.50. Fits all School Master models.

### These Accessories Broaden Your A-V Program

#### SPEED-I-O-SCOPE SR.

This attachment for School Master projectors is a "must" for any teacher whose field includes remedial reading, languages or arithmetic. Exposes material at selected intervals of from one to 1/100 second. Brightness of image can also be controlled. The Speed-I-o-Scope Sr. has seven speeds plus bulb. Price . . . \$89.50 with case. Speed-I-o-Scope Jr. \$59.50.

#### MICRO-BEAM ATTACHMENT

This accessory converts the School Master into an efficient projector of microscope slides. Various size disc openings permit focus on any section of image. Image is enlarged 12 times for each foot of distance from projector to screen. Price . . . \$39.50 with case.

\*Trade Mark.  
Prices are subject to change without notice.

For additional information on School Master Projectors and accessories write Dept. ES-59, Graflex, Inc., Rochester 3, N.Y. A subsidiary of General Precision Equipment Corporation.

# HAVE YOU HEARD?

News About People, Organizations, Events

## Four Universities To Establish Language Institutes

Institutes for the purpose of improving teaching skills of foreign language teachers in elementary and secondary schools, "particularly in the use of new teaching methods and instructional materials," will be established this summer at the University of Colorado, University of Maine, University of Michigan and Louisiana State University. Authorized under Part B, Title VI of the National Defense Education Act, these sessions will be free to participants; Federal funds will provide \$75 per week for each teacher in attendance, plus \$15 for each dependent.

## New ETV Appropriations from Ford Foundation

The National Program in the Use of Television in the Public Schools, an experiment in regular classroom instruction by television in elementary and secondary schools, has received from the Ford Foundation an appropriation of \$1,097,000 to continue its work for the third and fourth years. At present this includes experiments in schools of eleven cities: Atlanta, Detroit, Evansville, Kansas City (Missouri), Louisville, Miami, Milwaukee, Norfolk, Oklahoma City, Philadelphia and Wichita. Additional school systems in the Louisville and Evansville regions and in North Carolina, Nebraska and Oklahoma are also taking part. The new appropriation will ex-

pand the program to include school systems in Anaheim, California, Des Moines, Iowa, central Michigan, central Ohio, and western Florida. More than 750 schools are expected to be participating next year.

The Washington County, Maryland, experiment to provide regular classroom instruction through closed-circuit TV received a grant of \$245,000. This project now includes all 15,000 pupils in thirty-six of the county's forty-nine schools.

## Indiana University Holds NET Conference

Representatives from 42 film libraries in 29 states participated in the first National Educational Television (NET) Film Service Conference held recently at Indiana University.

The two-day conference brought together staff members of the National Educational Television and Radio Center (NETRC), Ann Arbor, Michigan, NET Film Service personnel at Indiana University and directors of film libraries involved in the distribution of NET films.

Planned to bring about a better understanding between libraries, NETRC and NET Film Service, discussion centered around four general areas. They were (1) a definition of the basic program policy of NETRC, (2) a clarification of the link between the film libraries and the Center, (3) the importance of the television or kinescope films made for the 16mm audience and (4) the implications of the National Defense Education Act with respect to production of programs for NETRC.

Those making presentations and leading discussions were Kenneth Yourd, James Robertson and Ed Cohen, representing NETRC; Charles Schuller, Director of the Audio-Visual Center, Michigan State University and President of DAVI; and L. C. Larson, K. C. Rugg, Ed Richardson, Marvin Dawson and R. W. Frye from Indiana University. Herman B. Wells, President of Indiana University, opened the conference with a reception at his home.

## Aural Reading Machine

A new machine to enable the blind to read ordinary printed material is being evaluated by the Battelle Me-

morial Institute, which designed it under contract to the Veterans Administration. At the present stage of development of the reader, the sounds produced by the device do not resemble speech but are patterns of musical tones similar to chords played on an organ. By interpreting these tones trained users should ultimately attain a speed of fifteen to thirty words per minute.

## IAVA Meets at Springfield

The semi-annual meeting of the Illinois Audiovisual Association, April 2-3, drew an attendance of 85 from all parts of the state. Highlight of the meeting was an address by Dr. George T. Wilkins, newly elected State Superintendent of Public Instruction, on the Illinois plan for implementing the National Defense Education Act. This was later detailed by a member of his staff, Edward S. Chesko, especially as to Title III. The first afternoon session was taken up by six roundtable discussion groups who reported their findings at the opening of the second day sessions. A dinner meeting was addressed by Dr. Charles F. Schuller, DAVI president, also on NDEA. His address was followed by the screening of Coronet, Delta and EBF films.

At the business meeting Friday morning, chaired by president Horace M. Wollerman, minor constitutional changes were approved to harmonize with the major changes voted last fall. An offer is to be extended to EFLA and to NAVA to cooperate in staging an educational (classroom) AV workshop along lines similar to those found successful for years by the medical, industrial training and religious AV specialists. A similar offer of cooperation was extended to NAVA in meeting the invitation of the National Association of School Boards to help arrange an audiovisual program at that association's meeting in April 1960. Dr. Philip Lewis, Dr. James P. Fitzwater and William F. Kruse were named a committee to implement these offers.

Of the 85 registrants at the close of the first day, 40 were professional AV specialists, 7 were county or other superintendents, 4 represented government agencies, the remainder were AV manufacturer or dealer representatives.

"But why do I have to go to school when there are so many educational programs on television?"

(Copyrighted 1959 by F. A. Owen Publishing Company; reprinted from *The Instructor* by permission)

# NO MORE AUDIO- VISUAL ROOMS!

Audio-Visual rooms (special projection rooms) are no longer adequate. The ambient light of the modern classroom must be quickly and easily adjusted to suit any subject, projector or student activity. LEVOLOR Audio-Visual venetian blinds can be installed in all classrooms to do just that.

With a LEVOLOR installation, the instructor can at any time and for any subject quickly and easily adjust the classroom light. There's no delay, no need for a special room assignment.

Write for Levolor's invaluable survey report "How Dark Should Classrooms Be For Audio-Visual Instruction?" No charge or obligation. Write to Audio-Visual Dept., Levolor Lorentzen, Inc., 720 Monroe St., Hoboken, N. J.

Be sure to specify

**DISTINGUISHED VISITORS AT EXHIBIT:** Postmaster General Arthur E. Summerfield (center) inspects tape recorder exhibit. Others, left to right, Mrs. J. M. Kuhlik, Richard L. Sanner (Hawaii), Charles S. Schuller (DAVI President), and Anna L. Hyer (DAVI Executive Secretary).

**LEADERSHIP LINE-UP:** DAVI President Walter S. Bell (center) confers with next-in-line President-Elect, James D. Finn (left), and Vice-president James J. McPherson.

## DAVI Convention a Success

"**Q**UANTITY. Quantity Education" was the central theme of the 1959 Convention of the Department of Audio-Visual Instruction of the National Education Association (Seattle, April 13-16). The opening general session address by President Charles F. Schuller called attention to the short-changing of education during war and postwar years and especially during the past decade. He urged teachers to work outside as well as inside their classrooms so as to extend their influence "into those legislative bodies on whom so much of the future of education depends."

He called on DAVI members in particular to work more closely with other professional educator organizations to solve the basic issues, qualitative as well as quantitative, that today confront the schools and their publics. Special credit was given the drive by NAVA, as well as by DAVI to pass, and, later, to hold the line for the National Defense Education Act.

Other general session speakers included Lindley J. Stiles, dean, School of Education, University of Washington; Roy M. Hall, Assistant Commissioner for Research, U. S. Office of Education; and John Fritz, Director, Audio-Visual Center, University of Chicago. There were addresses also by film producer Julien Bryan and by J. Stanley McIntosh, Executive Director, Teaching Films Custodians.

The five-day program followed very much the usual DAVI pattern, with separate smaller meetings for special occupational subject area, television

and administrative interests. Total paid registration was announced as 1,005, and several thousand complimentary tickets were distributed through school channels to teachers for after-school attendance at technique demonstrations and at the exhibits.

At the exhibitors' meeting, Sunday, there was sympathetic understanding of the difficulties faced by Mrs. "Mickey" Bloodworth, who was called in to complete the convention arrangements begun by Kitty Welch (Mrs. M. C. Hedquist). Ben Peirez spoke for all the exhibitors when he urged better planning for next year's meeting at Cincinnati. A committee of exhibitors was chosen to meet with DAVI's new planning committee.

Of 868 registrants during the first three days 158 were AV directors in school systems, 140 University and college staff, 48 AV building coordinators, 36 superintendents and principals, 48 teachers and the rest widely distributed in subject and administrative interests.

There were 18 registrants specifically in the field of religious education, but two packed sessions, on Sunday afternoon and evening, attested the growing importance of this now officially recognized DAVI Section. "Commercial" registration at the same point was 230.

The exhibit booths (69) were sold out weeks before the show and another 20 could have been disposed of had there been room. All exhibitors made impressive use of their space.

Important revisions in committee

structure were made at the Board meeting prior to the opening of the convention. A Committee on Committees, headed by incoming president Walter S. Bell, overhauled DAVI's list of 47 committees and recommended the continuation in their present form of only four — Archives and History, Buildings and Equipment, Legislative, Research, and Standards (and specifications) for AV Equipment. Two are to merge into a single "Professional and Teacher Education Committee."

Other committees in the main will be absorbed into five "sections" which will henceforth elect their own officers: They are (a) College & University Programs; (b) School Systems Programs; (c) Individual Schools Programs; (d) Religious Education Programs; (e) Armed Forces Programs.

Executive Secretary Anna L. Hyer made a well-visualized report on DAVI's many activities during the year. A "first" at this session was the awarding of meritorious service certificates to 31 veteran members who upon reaching either retirement or age 60 and with not less than 10 years of DAVI membership have made "outstanding contributions to the field of audio-visual education." The following were the initial recipients of this honor: Albright, Roger; Arnsperger, V. C.; Auginbaugh, B. A.; Baumbaugh, Harry E.; Berg, Esther L.; Childs, Henry; Crakes, Charles R.; Crawford, Winifred E.; Davis, Evelyn; Devereaux, Alfred E.; Duffield, Paul E.; Emmert, Wilbur; Garrity, Helen B.; Hamilton, George E.; Hollinger, John; Hochheimer, Rita; Hunt, Emma A.; Krasker, Abraham; Kruse, William F.; LeSourd, Howard M.; Lewin, William; Lindstrom, Chester; Mahan, Bruce E.; McClusky, F. Dean; Olney, Austin L.; Ramsey, Grace; Rising, Justus; Rue, Judith; Shields, Wendell; Smith, M. I.; Trolinger, Celia.

## With the Authors

PHILIP LEWIS is Director of the Bureau of Instruction Materials for the Chicago Board of Education. He has been TV editor of this magazine for over ten years, and has served on the DAVI National Television and Teachers Committees. A former teacher of audiovisual courses, he has acted as consultant to groups and schools, and has conducted and participated in many workshops. Dr. Lewis also designed the Audio-Visual Center at Chicago Teachers College and pioneered the TV setup used there as a model. He is currently authoring a TV Guidebook for the Electronics Industries Association.

WILLIAM C. MILLER is an educational Consultant with the Wayne County Board of Education, specializing in instructional materials. Formerly he was instructor in audiovisual education, and then Assistant Director of the Audio-Visual Materials Consultation Bureau of the College of Education, Wayne State University, Detroit. He has served in official capacity in many local and statewide organizations and has also been a member of the editorial board of *Audio-Visual Instruction*.

MAJOR W. C. WASHCOE is a member of the staff and faculty, U. S. Army Command and General Staff College, Fort Leavenworth, Kansas, where he is Chief of Editing and Publishing Services. He is also in charge of determination of criteria and provision of technical advice on audiovisual applications. A graduate of Penn State, he worked in professional theater before entering the Army. Recently, he was program chairman for the Armed Forces section of the DAVI convention.

DEPARTMENT EDITORS are: AUDIO—Max U. Bildersee, audio education consultant, state department of instruction; AV IN THE CHURCH FIELD—William S. Hockman, Director of Christian Education, First Presbyterian Church, Glens Falls, N. Y.; FILM EVALUATIONS—L. C. Larson and Carolyn Guss, both of the Audio-Visual Center, Indiana University, Bloomington; FILMSTRIPS—Irene F. Cypher, Associate Professor of Education, New York University.

# SUDDENLY they respond...

when you teach with the  
**AO Spencer Opaque Delineascope**

**SO EASY** Teaching and learning are much easier with this unique delineascope. You just flip a switch to project a big, bright picture of your teaching materials exactly the way you want to show them...subjects become dramatically alive...and your class responds as a unit. You teach more effectively because you show what you mean. Learning is more fun this way.

**SHARPEST IMAGE** Coated objective optics cut internal glare and reflection. With the exclusive all-glass reflecting system, this guarantees a sharp, crisp image on the entire screen...edge to edge...corner to corner.

**1,000 WATT INTENSITY** High-powered illumination shows a clear, detailed picture in a semi-darkened room, or even a normally lighted room with shades up. The entire system is cooled by a quiet, motor driven fan... a constant stream of air over projected copy keeps it safe.

**STURDY, PORTABLE** The delineascope is built of rugged, light-weight, lifetime aluminum. Carry it anywhere. Precision mechanical fitting throughout assures permanent optical alignment.

# Let's Get Together on Title III

NAEB is the abbreviation for the National Association of Educational Broadcasters, and NDEA is a symbol for the National Defense Education Act of 1958. The respected Executive Director of NAEB had some very interesting things to say about Title III of NDEA in a recent issue of the NAEB Newsletter. In his memo column to members of NAEB he seemed pretty incensed because he believes the audiovisual people are advocating the purchase of films, filmstrips, and projectors with Title III funds to the exclusion of other media. He tells the radio and television educators they had better get busy to protect their interests.

When you talk with the film people they claim it's the etv boys who are trying to get a corner on all the funds. There are also loud pleas from the science laboratory and language laboratory people that the funds should go mainly for their equipment. The textbook publishers are trying desperately to overcome the impression that textbooks are not altogether excluded and that you can use Title III funds for buying textbooks. The librarians see the NDEA as an opportunity to enlarge the language, science, and math book collections in the libraries.

School administrators' desks are being covered with brochures and advertising circulars telling them what to do about Title III. But it's a rare piece indeed, that makes any reference whatsoever to the intent and purpose of Public Law 864. There *was* fundamental purpose to the Act; and it should not be forgotten that it was intended ". . . to provide substantial assistance . . . to insure trained manpower of sufficient quality and quantity to meet the needs of the United States." With specific reference to Title III, the purpose is stated in the title itself, to provide financial assistance for "strengthening science, mathematics, and modern language instruction."

It seems to us there are grave dangers that in the urgency to develop plans and projects for the expenditure of Title III funds, quantities of things may be bought under pressure without full consideration as to just how these materials and equipment will be used to strengthen the instructional program. We heartily endorse and repeat a conclusion of NAEB's Executive Director that "Neither TV nor films of themselves, in whatever quantity, will *guarantee* better education." The big and the difficult question is, "How will these newer materials and equipment be used, once they have been purchased with Title III funds, to strengthen instruction and to insure that this country will be provided with the trained manpower it needs?" This is the big question that must be answered at local levels and in terms of local needs. If Title III funds are to be spent wisely, the question should be answered *before* materials and equipment are purchased rather than afterward.

Decisions about steps to be taken to improve the instructional program must be made by those who have the responsibility for the instructional program. In the last analysis it is the Boards of Education that have this responsibility. But they act upon the recommendations of their Superintendents, and a Superintendent's recommendation is soundest when it is based upon the advice and counsel of all of his staff members who are concerned.

Although school audiovisual directors cannot make the final decisions about what will be done with Title III funds, they do have an important role to play. They should work closely with science, math, and foreign language supervisors and consultants, with librarians and textbook consultants, and with radio and television specialists. *All* instructional media encompassed by Title III should be considered and definite agreed-upon plans drawn up to acquire only those materials and equipment that hold most promise for meeting local needs for the improvement of instruction in the specific areas.

The times are too urgent and the educational needs of this country are too great to permit petty bickering among the too enthusiastic advocates of different media of communication. In this modern age, no instructional program can achieve maximum effectiveness without the use of audiovisual media, and spoken and written words, too.

*Paul C. Reed*

At Morris E. Ford Junior High School, Franklin Pierce School District, Parkland, Washington, Mr. C. Bernard Walter, District Audio-Visual Coordinator, says:

**“You can sit anywhere . . . see a clear, sharp picture . . . hear sound distinctly—when the Kodak Pageant Projector is on.”**

“With this projector, students next to the windows can see as clear a picture as those in the darkest corner of the room. And there’s no question about the audibility of the sound anywhere in the room.

“Teachers like the Pageant because it’s so simple to set up and run.

“We administrators like the machine because it doesn’t give us any upkeep worries. We don’t have to keep lubrication records for one thing.” (Pageant projectors are lubricated for life at the factory.)

The extra brilliance you see with a Kodak Pageant 16mm Projector is due to this machine’s Super-40 Shutter, an exclusive feature, which projects 40% more light on the screen than ordinary shutters at sound speed.

Superior sound audibility is a matter of the Pageant’s true-rated amplifier (choice of 8-, 15-, or 25-watt models), plus the unique sound-focusing control, which lets you pinpoint sound clarity.

Ask your Kodak Audio-Visual Dealer to demonstrate. Or get full details by writing for Bulletin V3-22.

# TV's Exciting Development

by Philip Lewis

**A**FTER little more than a decade of discussion, experimentation and field-testing, television has achieved impressive status and almost general recognition as to its inherent values for educational applications. Now a new phase has been entered which promises to both challenge and inspire educators engaged in all aspects of the teaching-learning process.

It must be made clear that television, either closed-circuit or broadcast, is only a vehicle or means of communication with certain peculiar advantages as well as definite limitations. If the educational end-products are to be valuable as a result of using this medium, it will be because the content transmitted electronically has been carefully selected to achieve worthwhile and necessary objectives, and the presentation has been made in a manner utilizing techniques which television can accommodate effectively.

This same principle has been applied without question to textbooks, motion pictures, recordings and other instructional materials in the past. Why then, should not television be accorded this same treatment? It is not an either/or decision between TV and motion pictures, as has been stated by some persons in the field. Neither does, nor should this become an issue of automation in teaching to eliminate the very necessary face-to-face relationships between the instructor and the student. It is unthinkable to replace the chalkboard with the tiny slate, the

modern duplicator with the gelatin tray, or the functional student desk with the archaic wooden bench and table. Technological developments must be adopted and adapted wherever they will facilitate the work of the teacher and better serve the needs of the student.

Experience with televised instruction projects over the country reveals a number of basic problems needing adequate solutions before the full potential of TV is realized. Many of the answers, when they are forthcoming, will benefit the general field of education as well:

1. What should be the place of television in the total framework?
2. What instructional approaches can best be used with TV?
3. What must be done to insure an adequate supply of trained TV teachers? What are the attributes necessary for a television teacher? What preparatory experiences should the classroom teacher have in order to use telecasts effectively?
4. How can the efforts of the TV teacher and the classroom teacher be coordinated for optimum results? What feedback arrangements and cooperative planning patterns should be used?
5. What evaluation instruments need to be devised to measure the overall effects of television teaching — not just achievement alone?
6. At each maturity level how much televised instruction can a student receive and still main-

Figure 3. Top view of classroom designed for TV. In the center, a ceiling suspended unit contains eight separate screens.

tain a desirable balance in terms of the total program?

7. What factors should be considered in the design of school buildings to provide adequately for the use of television? What modifications can be made to existing buildings?

8. What can be done to overcome scheduling bottlenecks encountered with televised instruction?

9. What are the economic considerations in the use of television?

10. What equipment developments and other technical advances are needed to permit implementation of educational objectives?

11. What do we really know about the communication process that can be applied to the use of television?

It is not intended to convey the impression that all of the questions listed need not be answered completely before an educational institution participates in the use of the television medium. Actually, only widespread utilization will evolve the answers. It is important, however, to recognize the factors to be dealt with in any project to be activated.

#### Classroom Considerations

A recent canvass of the school building field revealed that comparatively little information has been released dealing with architectural approaches to adapting schools and classrooms to television. One of the exceptions discovered was in the person of John Rowlett, an Oklahoma architect, who has demonstrated both vision and creativeness in his approach. Two major considerations are involved: (1) to arrange classroom viewing situations so that only a single TV screen is visible to a student regardless of the use of multiple sources. (2) rooms are arranged with mobile dividers so that extreme flexibility of arrangement is possible—compartments for small group televising, expanding into large areas for total group classroom instruction. It is well worth the time to review the sketches in Figures 1, 2, 3, 4, 5, and to adapt any of the suggestions that suit the needs of a local school situation.

#### Receiver Possibilities

Currently, most television-equipped classrooms have two separate receivers. It should be quite

Figure 4. Front view of classroom shown in Figure 3, with six-screen unit.

Figure 5. Cyclorama TV, in which the teacher could create any environment by flicking a switch. The TV wall could be a passive aid or the active teaching agent. These sketches are by architect John Rowlett.

practical to design a modular receiver with a central tuner, power supply, etc., into which additional compact viewing screen units could be plugged and arranged 90° or less apart to service almost any situation. This assembly could be ceiling mounted, or placed on a mobile stand. Each screen would be isolated from the next by a narrow, clip-on baffle, and would provide flexibility of class grouping, future expansion possibilities, and simplified servicing requirements.

A provocative "Education for Tomorrow" display arranged by the American Seating Company at a recent A.A.S.A. Convention (Figure 6) suggests some possibilities for installing small TV receiver screens at each student work station in a laboratory. These units would be connected to TV cameras focused on the instructor's demonstration table. With such facilities skill operations could be taught more effectively and without the customary number of repetitive and time-consuming performances on the part of the instructor.

#### Data Remotioning

Electronic transfer of data will become an increasingly important function of television as used in educational institutions. An exciting example of such an installation connects the Alderman Library by coaxial cable to five widely separated buildings on the campus of the University of Virginia. This closed-circuit system makes it possible for an individual to use a spe-

Figure 7. This system (DuKane Co.) incorporates central sound, intercom, fire sensing alarm and other accessories.

Figure 9. Experimental equipment to demonstrate the ability of a single TV channel to telecast two separate programs simultaneously. (Blonder-Tongue Laboratories)

Figure 6. An "education for tomorrow" unit (exhibited by American Seating Co.).

R.C.A. Video tape recorder, which magnetically records in black and white (three racks at right) or in color with the addition of the three racks on the left.

cial telephone to call the Library from a central location in one of the cable-connected buildings. The librarian receives the verbal request for reference information and selects the volume desired from the stacks. The book is placed upon a support attached to an automatic page turner facing a television camera. When the book is in position, the originator of the call is in full charge of the page turner and the TV camera through the use of remote controls, and may pursue his reading from the monitor screen at his building location.

#### *Television and Central Sound*

The DuKane Corporation has released information on their M.C.S. System (Figure 7). This is described as an integrated approach incorporating centralized facilities for a school to provide for the distribution of sound, intercommunication, television, bell signals, fire sensing alarms, and related services. It is interesting to note that television has been included as an integral feature.

#### *Video Tape for \$10,000*

It was mentioned previously that scheduling broadcast TV offerings in a school was one of the major obstacles to their general use. Telecasts now require that all students must be ready to view a program when it is on the air, or when it is placed on the cable from the originating studio in a school. Video tape devices have been heralded as a solution to this problem. Current models, however, while highly successful for commercial applications are still rather expensive for general acceptance for use with educational projects (Figure 8). Recently R.C.A. demonstrated an experimental prototype video tape machine which has been designed to sell for around \$10,000. Although the quality of the recordings will be somewhat below commercial standards, the results should be quite satisfactory for most educational purposes. With such ma-

chines in schools, television in education will take on a flexibility that up to now has been only a dream.

#### *How Many Channels Are Needed?*

Some cities have already activated two educational TV stations in order to provide sufficient programming time for use with schools. Such expanded facilities are only a beginning. It is not yet known how many channels will be needed to allow TV to make its optimum contribution when utilization approaches its peak. Even the persons concerned with the Hagerstown installation (with access to five closed-circuit channels) are considering the possibilities of adding telecasting facilities.

Several suggestions have been advanced to help provide additional channels. These range from the more extensive use of low-power transmitters with limited coverage to the employment of satellite and translator facilities. An unusual approach to the problem has been made by the Blonder-Tongue Laboratories (Figure 9). An experimental electronic arrangement makes it possible to send out two different programs simultaneously over a single transmission channel. It has been suggested that when fully developed, a commercial station could use the "a" section of its channel for regular programming while the "b" section could be used for educational purposes.

#### *The Designs Are Still Being Formed*

The purpose of this presentation is in the nature of an interim report. It is difficult to cover all of the developments occurring within the last year or so in this space—or to even put them into proper perspective. This is the responsibility of the individual. It is important, however, to take note of the trends and to help direct their future course, rather than to wait until the patterns have crystallized without the active participation and guidance of the educator.

# Only One Stop For Instructional Materials

by Paul C. Reed

**T**HE library in Rochester's new East High School will be called a "library." In fact, it will be known as the Albert H. Wilcox Library in memory of the loved and respected scholar and leader who served as the first principal of that school for nearly forty years. However, the main library reading room has been planned in relation to the adjacent rooms so that the whole will serve as an *instructional materials resource center*. It is designed to serve the needs of every Department, and to serve effectively all the teachers and pupils of the school.

In its original report,\* the Audiovisual Committee for the new school conceived of this combination facility as a "one-stop service" for instructional materials. In addition to the traditional library services, the Committee specified the audiovisual functions to be carried on from this central point as follows:

1. To provide teachers with complete information of all ready-made audiovisual materials available to teachers from within and outside the building.

2. To file and loan on request to teachers such school owned audiovisual materials as flat pictures, charts, slides, filmstrips, records.

3. Upon teacher request to obtain from the Central Office and other places outside the building such audiovisual materials as motion pictures, recordings, etc.

4. To make originals and reproductions of chart, map, and photographic materials at the request of teachers.

5. To assist teachers in making all kinds of audiovisual materials needed for instruction—maps, charts, 2x2 transparencies, etc.

6. To provide for maximum mobility of all

audiovisual equipment in the building, its assignment upon demand, and its basic control and maintenance.

7. To assist teachers in the selection and most appropriate use of all audiovisual materials.

As you examine the accompanying floor plan drawing, you will see how well Faragher and Macomber, the architects, have planned the building facilities to serve the clearly stated purposes for which they are intended. Note particularly how they have provided for flexibility, and designed the space to serve not only functionally but to attract both teachers and pupils. Look at these features:

The twenty foot glassed showcase entrance alluringly invites all who pass to come inside to read and study.

The listening area for record and tape listening can be expanded or contracted to meet needs. There are no special cubicles. Recordings will be heard through earphones from one or several players.

Teachers' Preview and Conference Room

\*Copies of this report are available upon request to Dr. Howard C. Seymour, Superintendent of Schools, 13 S. Fitzhugh Street, Rochester 14, New York.

Floor plan for East High School's instructional materials resource center. Local architects Faragher and Macomber retained Moore and Hutchins of New York City as consultants. At right is a drawing of the library entrance.

LIBRARY ENTRANCE & DISPLAY CASES

Not showing in the drawing, beyond the library room at the extreme right, is a large study-hall classroom. This room can be added to or subtracted from the main reading room by a drapery at the windows between the rooms. The study room itself is divided by a folding partition.

Principal lures for teachers to the instructional materials center are the Teachers Professional Library and the Preview and Conference Room. Individual teachers and groups will use these attractive quarters for instructional planning. Although these rooms may be reached through the Library, it is more likely teachers will use the back door through the workroom. The isolated location of the Teacher Library was planned. Teachers sometimes like to get away from other people!

The workroom is conceived as a place where teachers may work to make their own instructional materials or to have them made. It also serves as a library workroom for book processing. It is spacious with a minimum of built-in shelving and counter space. Tables and files are provided and other equipment will be supplied as specific needs develop.

The photographic dark room is large, with plans available for converting it to two dark-rooms if they are needed.

The area labeled "stacks" is for the storage and distribution of sets of literature and supple-

mentary books used primarily with English and social studies classes.

You may be wondering at this point why there is no apparent provision for the storage of audiovisual equipment. In most av centers there is never enough space for this; and the movement of equipment between the center and classrooms is one of the constant chores for pupils in the projection club. But if you read the first article in this series, the one titled "Each Room an AV Room" on pages 126-7 of the March issue, you will recall that audiovisual equipment is to be supplied in more-than-usual quantities for this school. It is planned that this equipment will not be returned to a central storage point at the end of each day. Only extra and emergency equipment will be at the center; the rest will be assigned to Departments for long term periods, and will be located close to the points where it is used.

In planning for the use of audiovisual materials in East High School, it was recognized that the classroom was the critical point in the instructional program. It is here where teachers bring instructional materials into contact with learners. The classroom must be planned to make it just as easy as possible to use instructional materials once they are brought in. Other facilities must be provided

(Continued on page 249)

# The Versatile Overhead Projector

**T**HE overhead transparency projector is one of the most versatile audiovisual tools available for classroom use. It can be operated by the instructor without assistance as he faces his students, maintaining eye contact, measuring student reaction, and pacing himself accordingly. The transparencies used can be vivid, clear, lifelike, and easy to project, even in a lighted

room. Dramatic results can be achieved with minimum effort, and great variety in presentation techniques is possible. Ways of achieving limited animation are available — the simple “strip tease” and “flip-on” methods of progressive disclosure, operable plastic transparencies, Visomatic and Technimation treatments, to name some of them. A china marker and the cellophane roll permit use of the projector much like a chalkboard; pressure sensitive materials, bits of colored plastic, and even liquids may be used. Various easily made, even “homemade,” transparencies give the instructor a wealth of variety in presentation that is limited only by his imagination and by the ingenuity of the visualizers and artists in the audiovisual center that supports him. The transparencies can be used in any order, with the return to a previously used projectible an easy matter. The large aperture permits most efficient use of the available light.

At the U. S. Army Command and General Staff College, the transparency for overhead projection is the most used of some 30 audiovisual materials. The College realizes that the proper use of effective audiovisuals can result in more effective communication and, therefore, more efficient teaching and more rapid learning . . . learning that is retained significantly longer than learning acquired through purely verbal experiences. And when one must teach an ever-increasing amount of material more effectively in a given time frame, one turns to audiovisual aids among these several applications of the overhead projector.

The effectiveness of any projected image depends to a great degree upon adequate image brightness and its visibility to all within the classroom. The screen size is usually determined by the 6W formula which prescribes that the screen width should be one-sixth the distance to the furthest viewer. No viewer should be closer than two screen widths, or at worst, one screen width. Text projected upon this screen requires a letter height of one inch for a 32-foot viewing distance; two inches for 64-foot viewing. This includes a built-in safety factor for poor eyes and use of bold colors. Thus, using a 9½-inch wide transparency, a 5/32-inch high letter on the transparency will guarantee that the text is legible to all, presuming, of course, a clean, open, sans serif, medium condensed letter. If both upper and lower case letters are involved, the 5/32-inch criteria pertains to the lower case letters; if symbols, to the smallest feature to be discriminated.

An ideal situation would utilize a triangular classroom with the screen at the vertex. A rectangular or square room is more often available, and in it the screen normally should be in a front corner. The lower edge of the screen surface must be high enough for all students to have an unobstructed view of the whole screen. Front surface projection, with a standing instructor, provides unusual viewing problems, depending upon the viewing distance, screen size, and degree of keystone elimination required. It can lead to some very high and sharply tilted screens and similarly tilted projectors. Pointers and materials cannot be laid on a sharply tilted projection stage. If it is presumed that the in-

## Muir Hall Classrooms

Shown are two triangular rooms, with a projection booth between (1). The rooms feature instructor-operated rear screen overhead transparency projection (2). Students are oriented on the lectern at the apex of a triangle, and are within the 90° included viewing angles of the magnet-responsive chart panels (3), most of the chalkboard (4), and the rear and front screen surfaces. An electrically operated matte surface screen (5) drops in front of the lenticulated wide-angle dark grey Klearcite rear projection screen (6). Both green and projection-white ("magic wall") chalkboard are available, the latter in size 7.5' x 10'. No student is farther from normal projected images than six times the width of the smallest image used on all projection surfaces. Lighting is controllable, "bright" (48 foot-candles), "dim" (6-10 foot-candles), and "off," all from the lectern and podium. Slides and motion pictures can be projected on the walls; display panel attachment clips are provided on the tackboard trim. Overhead "blacklite" fixtures are installed, as are panel lights. Portable extra wide angle overhead transparency projection equipment, commercial opaque projectors, and sound equipment are provided on call.

structor must stand (all USA CGSC instructors stand during formal instruction), a solution to some of these problems is use of a suitably large vertical screen, off to the side of the instructor, using a special instructor-operated rear screen projection system.

The particular system discussed below entails a projection situation in a room with a 12½-foot ceiling beam, a 54-foot viewing distance, necessitating a nine by nine foot screen. The instructor stands on an 18-inch podium, either at a lectern or between the lectern and the screen, facing his class and using the overhead projector so that it produces a clear image without keystone from a perfectly level elevated projection stage. He can move freely about the stage, writing, drawing, using progressive disclosure, and pointing, either on the transparency with a colored transparent plastic pointer,

## A Bell Hall Classroom

The 9 by 9 foot overhead transparency rear projection screen (1) can be operated by the instructor at the projector (2) or behind the lectern (3). The level projector stand (4) matches the lectern. Selectively switched ceiling lights, projectors, etc., can be controlled from the lectern or face of chart panel hideaway (5). An 8 by 10 foot projection white porcelain enamel steel chalkboard (6) is centered on the front wall. Four large chart panels are provided, two (7 and 8) with iron screen over tackboard to permit use of magnetic aids over tacked-up charts, one (9) with inset piece of green steel chalkboard, and one (10) with a second projection white chalkboard. Panels slide to expose any two at a time. From the center aisle a standard overhead projector (11), and from closer in, a wide angle projector (12) can be used for additional images on surfaces which can accommodate simultaneously chalk, charcoal, magnetic aids, and "blacklite" materials. "Blacklite" source is behind panel light cove (13). A large fixed green chalkboard (14) is provided. A movable lectern (15) and instructor's lockable bookcase (16) are at right. Dimmable spotlight (17) is provided in some cases. The room is equipped with curtains on tracks (18). Some light baffles (19-20) are also acoustical. Tables (21-22) are provided as is an assignment board (23).

or at the screen image itself with a longer opaque felt-tipped pointer.

The room has a window wall with audio-visual blinds. The blinds are not as effective as well-installed opaque draw curtains, but they do serve to reduce room ambient light on the screen and other projection surfaces to about one footcandle. This is not dark enough for the best opaque projection, or under-exposed color film, but it is more than adequate for the most colorful diazochrome transparencies when a well designed and efficient overhead projector is used.

The instructor has selective switching control of fluorescent lighting, to give 48 footcandles on the tabletops for detailed reading; a medium level of 25-30 for black and white projection and casual reading; 12-18 for projection of mixed color and black and white line material with

### Projection Furniture Ensemble

A lectern, with tiltable paper tray, shelf, drawer, reading light, and, at upper right, control switches for lights, projector, etc. Matching projector stand, with transparency shelves, adjoins (without touching) it. Pin registration is used on the projection stage. This furniture was designed by the author along with the other items used for the rear screen projection installation.

### Overhead Transparency Projector PH-637A

Standard Signal Corps equipment commonly called the "Vu-graph." This unit is completely instructor operated. A continuous acetate roll is part of the unit and may be rolled across the projection stage. This may be written on with "grease" pencils.

### Remote Control Slide Projector

This automatic projector will project 30 35mm slides from each magazine. All slides used at one time must be bound in identical mounts, so as to prevent irregularities in focus. The unit is initially set up by a trained projectionist, but the instructor has complete operational control. The slides can be set to change automatically at intervals of 6 or 14 seconds, or the instructor can advance each slide by a touch of the hand control. Slide magazine may be moved forward or backward by the remote control. The projector is shown mounted on a mobile projector table.

cursory reading; and, finally, lights out for full color and opaque projection. Naturally less than half the tabletop light falls on the vertical dark grey screen.

The projection system involves a very efficient 750-watt overhead projector with an  $f/3.0$  lens of 18-inch EFL, placed on special furniture to permit a throw via a seven-foot square,  $\frac{1}{4}$ -inch thick, rear surface, plate glass mirror, to a flexible Polacoat lenscreen which permits room occupants within an included angle of 90 degrees to see very well. For a portable installation, a more durable surface, lenticulated Klearcite, WDM, is almost equally good. Money permitting, a rigid screen can be used effectively, and would permit the instructor to point directly at the screen with greater abandon. Similarly, a front surfaced mirror would give a more perfect image, but the material described gives an adequate one. The framing details are simple. A ceiling piece keeps ambient room light from the back of the screen and the grey screen color minimizes the effect of frontal ambient light.

Since the optical axis is slightly inclined upward to the mirror, a downward tilt of the mirror is built into the framing, to prevent key-stoning.

Any efficient projector for transparencies, slides, or film, when once placed on the established optical axis of the system, and given the proper lens-screen-distance relationship, can be used. If several projectors were to be used side by side, a pivoting of the mirror would be required, of course.

Each of the 24 classrooms in Bell Hall, and two in Muir Hall, in addition to the system described, are equipped with one or two projection-white porcelain-on-steel chalkboards used as projection surfaces for remote instructor controlled 16-mm motion pictures, two by two inch (35-mm) slide projection from the rear of the room, and for additional overhead projection from the front of the room. Terrain and charts are projected, and solutions or other data are added by colored chalk or charcoal or blacklite materials as well as by means of magnetic aids. The surface is a fine multipurpose aid to instruction. It can be erased with a combination rubber and suede eraser.

In some cases lenses up to 40-inch EFL are used for long throws over the heads of the students in auditoriums and briefing rooms to accommodate guest speakers who bring transparencies instead of the usual slides.

Two dimmer-controlled projectors, focused to give overlapping images, are used where large-image "fades" and "dissolves" or other special effects are required. Also, two projectors giving side-by-side images, rear or front projection, are used to make comparisons, provide dual images, or where smooth and rapid transitions from image to image are required for high-level presentations.

At USA CGSC specific projectors are used for specific jobs. There is neither time nor personnel available to convert one projector to a multiplicity of uses within the already crowded classroom hour, an hour in which every moment must be used efficiently by the instructor to sell an instructional point . . . to make a learning experience a memorable and effective one.

School children learn about their city's fire department at close range.

## Are Field Trips Worth While?

by William C. Miller

"I'm sold on the values of field trips," the superintendent said, "but I wonder why 80 percent of the school journeys take place in May and June."

Certainly when good weather comes, students and teachers alike yearn for the out-of-doors. Winter weather does limit some types of educational journeys but most field trips can be experienced during any season.

"If field trips are legitimate educational tools," the superintendent continued, "shouldn't visitation be going on throughout the year?"

Such questions are being asked more and more frequently with good reason. Because the field trip method is widely accepted, school journeys are becoming more common. Giving youngsters an opportunity to learn firsthand about their community rates high as a vital method of instruction; but some of the practices which go on under the name of educational field trips need objective examination. Outings which have as their primary purpose rewarding youngsters for good behavior, or trips which are not an integral part of a topic under study in the classroom should be subjected to close examination. School outings and picnics have a socializing function and there are opportunities for learning experiences, but such outings should not be labeled as field trips.

What questions should we ask ourselves to make certain we are utilizing the field trip method to the fullest? Here are some questions

designed to help evaluate field trip practices.

Did the need for this field trip grow out of regular classroom work?

Is a field trip the best method of gaining the needed information? Perhaps a motion picture could present the same information as effectively or resource people could be brought in at a great saving of time and money.)

Am I familiar with the place to be visited so that I know what will be seen? (A prior visit will help when it comes time to prepare the group. Contacting the place to be visited and informing them of the particular needs and interests of the group is also time well spent.)

Have I prepared the group for the field trip experience? (The group will profit most if they have specific information to look for and if they have discussed the most effective ways to observe and take notes.)

Was everyone able to see and hear satisfactorily during the field trip? Was time allowed for questions and did the questions reflect an understanding of what was observed?

Were the observations made during the trip discussed upon returning to the classroom and did the group engage in other follow-up activities?

By asking ourselves these questions we can properly evaluate our field trip practices. By having frequent and well-planned field trips, we can provide the best possible educational experiences for our pupils.

"A Dancer's World," winner for Music, Dance and Pantomime. Produced by Nathan Kroll, distributed by Rembrandt Film Library.

"City of Gold," winner for History and Biography. Produced by the National Film Board of Canada.

## American Film Festival Premiere!

**A**PRIL 1-4 saw the inauguration of the American Film Festival, sponsored by the Educational Film Library Association under the direction of Emily S. Jones. More than 40 16mm films, from a field which had been pre-screened to 250, received Blue Ribbons at the Gala Award banquet, where the awards were presented by Dr. Irene Cypher (New York University and *Educational Screen & AUDIOVISUAL Guide*), Mrs. Grace Stevenson (American Library Association), Cecile Starr (*Saturday Review*), Dr. John Bachman (Union Theological Seminary), Howard Thompson (16mm reviewer, *New York Times*) and Darryl Miller (American Medical

Association). These films and filmstrips, listed below, will later be screened at film festivals in Los Angeles, New Brunswick, N. J., Chicago, Muncie, Ind., Minneapolis, and other cities.

Highlighting the Festival was the presence of many leaders of the film field. Also, Martha Graham accepted the award for "A Dancer's World" in person (see opposite page). Additional pleasure for those attending was provided by two programs sponsored by the American Federation of Film Societies: William K. Everson, president of the Theodore Huff Film Society and film historian, presented a series of films dating back to 1896; and Len Lye, prize-

winning film producer, showed several experimental films.

At the EFLA annual meeting, past president Edwin Welke of the University of Minnesota related the history and development of the Festival. Officials and exhibitors for the most part felt that the success of the 1959 American Film Festival should lead to bigger and better things ahead.

## Blue Ribbon Winners

### *Agriculture, Conservation, and Natural Resources*

"Watershed Wildfire," produced by the Motion Picture Service of the U. S. Department of Agriculture.

### *Citizenship and Government*

"Charting A Course," produced by Charles Guggenheim and Associates for the Citizens' Charter Committee of Saint Louis.

### *Economics*

"Beyond the Valley," produced by John Bransby Productions for Esso Standard Oil Company.

### *Education and Child Development*

"Class of '58," produced for *Twentieth Century* on CBS-TV, sponsored by Prudential Insurance Company, distributed by Association Films.

### *Geography and Travel—North and South America*

"Valley of Light: Yosemite," produced by the Ford Motor Company.

### *Geography and Travel—Europe, Asia, and Africa*

"Japan," produced by the International Film Foundation.

### *Guidance and Careers*

"The Human Cell and the Cytotechnologist," produced by Churchill-Wexler Film Productions for the National Committee for Careers in Medical Technology.

### *History and Biography*

"City of Gold," produced by the National Film Board of Canada, distributed by McGraw-Hill.

### *Home Making*

"The Art of Gift Wrapping," produced by Hallmark Cards for Association Films.

### *Instruction in Arts, Crafts, Skills, and Study Techniques*

"Magazines to Transparencies," produced and distributed by the University Broadcasting Services of Florida State University.

### *International Relations*

"The Lady From Philadelphia," produced by Edward R. Murrow and Fred Friendly for CBS, distributed by Contemporary Films.

### *Mental Health*

"Bitter Welcome," produced by Affiliated Film Producers for the Mental Health Departments of Minnesota, Louisiana, and Delaware. Distributed by Mental Health Film Board. \*Sec Cover.

### *Nature and Wildlife*

"A Way of Life," produced and distributed by the Missouri Conservation Commission.

### *Sports, Physical Education, and Recreation*

"The Melbourne Olympic Games," produced by Jam Handy Organization for Coca Cola.

Erickson, Carlton W. H.

## ADMINISTERING AUDIO-VISUAL SERVICES

(The Macmillan Co., New York, 1959. 496 pp. \$6.50)

*Reviewed by Paul W. F. Witt,  
Professor of Education, Teachers  
College, Columbia University.*

This book was designed to be used as a textbook in graduate courses preparing audiovisual specialists, as a handbook for audiovisual directors and building coordinators, and as a planning guide

for superintendents, principals, and curriculum leaders. These people should find this book very useful for the author has done a competent professional job of collecting, organizing and presenting a large amount of pertinent practical information within a sound pedagogical framework.

He has drawn on a rich background of personal experience in a variety of educational posts and situations and has utilized selected references and a wealth of information gleaned from recent visits to a number of leading audiovisual centers to offer many useful ideas, illustrative examples, and materials regarding competencies and duties

of audiovisual directors; organizational patterns for audiovisual (and instructional materials) programs; inservice education of teachers; acquisition, care, and maintenance of equipment; evaluation, selection, procurement, distribution and use of materials; development of desirable physical facilities; planning and operation of audiovisual centers; budgeting; and the development of lay understanding and support.

Noting the complexity of the audiovisual director's job, the author describes the director's roles as executive, supervisor, audiovisual specialist, and equipment technician; but he also emphasizes, desirably, that the director is first and foremost a curriculum specialist and that he should function as a member of the curriculum team. In keeping with modern concepts of supervision, the author makes clear that the director's job is to help teachers select and use audiovisual materials "for greater valid achievement." He points out that it is fatal for the director to devote his time and energy to equipment repair and routine duties.

Erickson recognizes that audiovisual programs are not developed "by the numbers," but in terms of clearly defined goals, on the basis of principles, and with reference to local needs and conditions. In his words, "It is the purpose of this book to open up clusters of problems likely to confront the school system audiovisual specialist and to point out fruitful lines of attack on these problems, but it will be the degree to which the director can identify his local problems in terms of clear-cut needs and the degree to which he can set up his own purposes for action that will determine his effectiveness." To perform his duties effectively the audiovisual director needs, according to the author, "... penetrating insight into the processes of teaching and learning . . . broad understanding of the roles that audiovisual materials play in helping teachers, and . . . ability to apply a system of principles in guiding his thinking about the utilization of the materials he will seek to provide."

Effective programs do not just happen, they are the result of leadership, "friendly, understanding, capable, democratic leadership." This book should contribute significantly to the development of leaders in audiovisual instruction who have these attributes. We urgently need them.

# One Stop for Materials

(Continued from page 241)

to expedite getting the materials to the classroom.

The sight and sound distributing facilities, discussed in the second of this series of articles published last month, were designed to bring the "intangible" materials into the classrooms — the sounds and visual images. Radio and other sound programs come into the classrooms through a central sound system at the teacher's request and for his instructional use. Through centralized closed circuit television facilities, television programs come into the classroom from remote parts of the building, the community, or the nation. They come as instructional materials to be used by the teacher as he needs them. The sight and sound system serves classroom instructional needs.

Similarly, the instructional materials resources center described here is conceived as a service facility to meet the needs of the classroom instructional program. It will service the "tangible" instructional materials. It will be the center for information about all available materials. It will be a materials storage, ordering, and distribution center where, ideally, teachers may but express the need for specific instructional materials, and those needs will be filled. Ideally, also, the center will serve as a place where teachers may make or have made those graphic and photographic materials that are unique to their needs and must be created to their order. Backing up this school resources center will be the resources of the school system's Department of Instructional Materials serving the needs of all schools.

Quoted on the first page of the Committee's report that set down the basic principles, ideas, and ideals for the audiovisual facilities that have been built into this new school, are these words from the Thirty-first Yearbook, 1953, of the American Association of School Administrators: "The newer conception of materials needed for instruction will affect the design of school buildings."

This happened in Rochester. Certainly the Board of Education, the Superintendent and all of the staff concerned with the new school understand clearly this "newer conception." They understand that if teachers are to do their best teaching, teachers have a right to ready

access to whatever instructional materials they need when they need them. Administration has a responsibility to recognize these rights of teachers and to fill these needs. Rochester's Board of administration also recognizes that teachers need and will use all kinds of instructional materials when they are made readily available; and that these materials must be carefully and closely interrelated at the point of use.

The "newer conception of materials needed for instruction" affected the design of East High School. Its form and design evolved from the specific learning and teaching activities that were to be carried

on within the building. The planning of its classrooms and the planning of the facilities to serve those classrooms not only will make it possible for teachers to make use of audiovisual materials, the building itself will urge teachers to use them.

(Editor's Footnotes: There are two of them. The first is a word of appreciation to John Wallour in the Faragher and Macomber office who made all of the illustrations used in this series of three articles. And the second footnote is a very personal one. To understand my real and devoted interest to the plans for this new school, you should know that I was graduated from the old East High School and it was there I was first a teacher! PCR)

Scene from "Burden of Truth"

## Burden of Truth

(United Steel Workers of America, 1500 Commonwealth Building, Pittsburgh 22, Pennsylvania) 67 minutes, 16mm, sound, b&w, 1957. Apply to distributor for terms governing use. Produced by Allend'or Productions. Teacher's guide available.

### Description

This film focuses on the theme of anti-Negro discriminations and segregation in American life and challenges the viewers to accept the burden of truth. It assembles correlated incidents to represent a pattern that operates in the society and through its characterizations it presents prevailing sentiments and practices along with the usual arguments which are used to justify their existence. Joe Hamilton, a Negro youth, is presented as the central character of the plot and his experiences are dramatized first as a janitor of a saloon in his Southern hometown, then as a working college student in a northern university, and later as an industrial worker in a northern city. *Burden of Truth* deals with Joe's courtship of Ella Mae, his vocational adjustment, and his housing and social adjustment. In each situation the interaction of the people shows varying degrees of acceptance

and rejection toward Joe, and the story points up the dilemma of whether Joe should be accepted as a person, or should be perceived as a Negro symbol which should be rejected and avoided.

The opening scene of the film shows Joe and Ella Mae, his wife, besieged in their newly acquired home in a white neighborhood by the white neighbors who strongly object to having a Negro family in the block. While Joe and Ella Mae prepare to unpack their belongings, a stone is thrown through the window as the angry neighbors mill around outside the house. Ella Mae leaves the room to comfort their baby who is awakened by the confusion. As Joe begins to remove the broken glass near the smashed window, Ella Mae calls, "Joe, be careful." The words "be careful" set Joe to thinking of similar conditions of racial conflict and animosity in his hometown. As he squats in the scattered array of smashed glass, a sequence of scenes flashes back to a saloon in a southern town where Joe is painting a door, and the owner of the tavern tells Joe, "Be careful of that glass," and do not get paint on it.

As he carefully paints the door a little Negro boy who has not learned the doctrine of segregation, runs to a public fountain to drink water but is

halted by his father. Two white men demand that the father spank his son to teach him his place. When the Negro man's excuse for his son is not accepted by his tormentors, in humiliation and resignation the father administers the spanking to the son and only then is he allowed to retreat from the unpleasant situation, followed by the laughter of the amused white men.

Following are scenes which represent the feelings and behavior of southern workers towards Negroes. At the bar a worker reports on his encounter with a union organizer. This scene represents the objection to union organization in that Negroes would work beside whites and that equal pay to all workers would remove the inequalities between the groups. It is further stated that since Negroes need less than whites it would be unfair to allow them to earn white man's pay.

Upon leaving the saloon the two men who expressed a desire for segregation molest a Negro woman who comes along the streets on her way from work. Attracted by her screaming, Joe rushes up to explain her presence, but is brutally beaten for his efforts to interfere. As Joe lies on the ground being kicked and pounded, the film focuses on a view of the mob in front of the house just when a woman tells her neighbor that she is not prejudiced or anything, but "they should stick to their own kind."

The sequence concerning Joe's life at college is developed through the orientation stages with Joe's acquaintance with Jerry, a white school mate, and Ella Mae through their shared interest in baseball. Jerry is characterized as a carefree, nonchalant, easy-going youth who seeks the pleasures of college life while neglecting some of his studies. Joe and Jerry develop a friendship through tutoring sessions in English literature and casual relationships about the campus. Jerry's friends, however, pointedly warn him that "other people will talk" if he associates with a Negro on a level of friendship.

Following the incident with his friends Jerry goes through a period of confusion, but decides that his right to choose his own friends is more important to him than what other people think. To prove that a previous exchange of irritable words was not intended to break up their friendship, Jerry invites Joe to his home for a

A Coronet film  
to orient beginning  
students of Spanish...

## SPANISH: Introducing the language

Vivid scenes of a bullfight... a colorful Hispanic courtyard... a simulated Latin-American auto race—introduce the student to the Spanish-speaking world and provide a new motivation for learning the language. A charming dialogue in a Spanish restaurant in New York shows that Spanish is not just a classroom discipline, but a daily means of communication among people throughout the world. Teachers will find the film extremely helpful to orient new students to the language at all grade levels from elementary through high school. *Running time, 11 minutes. Available in either full, natural color or black-and-white.*

weekend. Unable to make an acceptably polite refusal, Joe reminds Jerry that he should check with his father to see "if the lease allows it."

In due time Joe and Ella Mae and Jerry and Gloria, his college sweetheart, graduate and become engaged to be married. In the meantime Joe and Ella Mae have problems of adjustment to life as Negroes in a white society. Lloyd, Ella Mae's brother and guardian, welcomes Joe as a suitor because he has dreams of marrying Ella Mae to a teacher or someone "who could care for her and help his people."

The courtship goes smoothly until Joe decides that he does not wish to teach, but would rather seek a position in advertising with a large firm. Lloyd is disappointed and strenuously objects to Joe's idealism and especially disapproves of Joe's taking a job as a restaurant helper while he applies for an advertising position.

During ensuing arguments Lloyd presents his views in the story of his struggle to better himself and his grudging acceptance of the place which society has reserved for him in the mill and in the Negro neighborhood. He refuses to continue to fight to work and live where "he ain't wanted," and demands that Joe give up his fight

and come to the mill with him. Ella Mae, impatient of waiting to be married, finally agrees to Joe's taking the job in the mill as a laborer. Shortly afterward Joe takes a job in the mill and he also takes Ella Mae as his wife.

While in the mill Joe refuses to content himself with his lot and continues his fight for advancement on the job and simultaneously carries on a running fight with Lloyd at home. Lloyd cannot forgive Joe for not being a "teacher or something" respectable. With a baby coming Joe becomes increasingly sullen at home but has his spirits rise when he enters competition for a promotion on the job. Lloyd advises against bidding for the promotion until he is first in line, but Joe tries and wins the job, though his chief competitor is a white man with seniority.

With increased pay in hand, Joe is impatient to buy a house for his family. Jerry, who is now married to Gloria and working in the real estate business, is called upon to make good his promise to sell Joe his first house. Jerry runs into trouble with his father, a constant speech-maker on democratic principles, when he decides to sell Joe a house outside the Negro neighborhood. In questioning his father's hypocrisy Jerry forces his father into advising

him that it is good business strategy to sell to Negroes when the profit is high enough, but not to incur the disfavor of people when no great profit is involved.

Lloyd, jealous and reluctant to part with Ella Mae and the baby, gives voice to excuses to justify his position on race relations: in his argument he predicts trouble and aggressions toward the child and persecutions from the neighbors. He warns Joe against "pushing" lest they take away the few privileges they do have and that "our place is with our own." He angrily and desperately argues, "Do you want your son to grow up and marry a white girl?" Joe maintains that he wishes his son to know that some whites are human, too. At the close of the film Lloyd pointedly asks, "Just how do you tell the good ones?"

The dilemma of Joe and Ella Mae and the fears of the neighbors are not resolved in the film. The audience is invited to discuss the issues.

#### Appraisal

Leaders in the fields of human relations or race relations and teachers of social studies will find this film useful in provoking thought and discussion in their groups. They must be on guard, however, to guide the discussion

into fruitful channels because the film does not point to specific issues for discussion, but rather, points to general problems. The purpose of the film is to bring to light discriminatory practices which work against certain ethnic minority groups. It should be useful in connection with social problems in groups which range from the high school level to college and adult levels. The target audience of the film seems to be general adult groups.

*Burden of Truth*, in using somewhat extreme examples to dramatize its theme, gets its message across. The manner in which the scenes are put together in the southern portrayal, along with their dramatic impact, presents a slightly misrepresentative picture of real, normal conditions. The sequence presents a series of truthful incidents which do happen to many people in time as the normal pattern of life for most individuals in the region. The language of the film speaks with blunt forcefulness in this case.

The characters of the film are consistent throughout as they represent various stereotyped opinion groups when they face problems which produce this American dilemma. Within the conflicts of the drama and the interaction of the personages, keen and subtle nuances of the discriminatory attitudes and practices are brought to light. The film shows the influences of social pressures on both sides of the issues and indicates that the discriminatory practices are based in fear of others more than on personal feelings.

The film is primarily a discussion type film, but it carries a message to Americans who have not examined their positions carefully and accept the pattern of discriminations against various minorities as a part of the nature of things. It bluntly presents the situation of the Negroes who accept discriminatory treatment because of their fear of conflict and the loss of the "little they have" as contrasted with those who pioneer in seeking equal opportunity to live and work as Americans.

— William Wheeler

## Communication in the Modern World

(Coronet Instructional Films, Coronet Building, Chicago 1, Illinois) 11 minutes, 16mm, sound, color or black and white, 1959. \$110 or \$60. Teacher's guide available.

Description

*Communication in the Modern World* is the story of how ideas and feelings are communicated from one

**Our thanks —**

**Just a year ago we announced  
our first film.**

In twelve months, by being willing to look at the product of a new company, you have established us on a firm basis. We promise to continue to put quality first in our work for you.

**Graver-Jennings Productions, Inc.**  
P. O. Box 303, Monterey, California

(If you have not received notices of our newest releases, write us.)

person to another through a variety of media.

The narrator explains that there are two forms of communication, sight and sound. Examples of these two types are presented, such as gestures, smoke signals, traffic lights, policeman's whistle, jungle drums, and the telephone. Motion pictures and television evidence a combination of the two.

As the viewer is introduced to a great number of mass communication channels, which include the modern printing press, two-way radio, telegraphy, postal service, and phonograph recordings, the importance of these many media to eliminating the barriers of time and distance is emphasized.

How important is communication to transportation, business, and everyday living? These questions are answered visually in quick order. The railroad of today must depend upon cross-country communication in order to know adverse routing conditions and crossing signals are a must for the safety of the motorist. The airplane pilot depends upon the radio for landing instructions, weather reports, and emergency pleas. Radar assists not only in commercial airplane travel but in water travel as well. The business man could not operate as extensively as he does without the assistance of an efficient communication system. He uses the telephone to talk to all parts of the country quickly, the postal and telegraph service to receive orders and transact business agreements, and the newspaper advertisement to promote his wares and services. Everyday activities are influenced by the daily mail delivery, traffic lights, radio, television, and the telephone.

Government agencies depend upon communication services in protecting the community—the policeman responds quickly to radio appeals and the fireman is notified instantly of fire by telephone or firebox. Television serves the government by keeping the people informed on vital issues as an enlightened public votes more intelligently. The continents of the world

are linked together by underwater telephone cables and radio signals span the earth. As a result, nations are brought closer together as is symbolized by the work of the United Nations.

The instructional film has brought the world to the classroom and the mass production of inexpensive books has shared the ideas of the great men of the past and present with every reader.

As the narration indicates, "Good communication is essential to help people exchange ideas and feelings more effectively."

#### Appraisal

The evaluating committee feels that *Communication in the Modern World* is especially useful as an introductory film for a unit on communication in the intermediate and junior high grades. As a broad overview of the great variety of communication channels in use, it serves the necessary role of introducing the student to the urgency of having rapid, effective communication and to the number of ways one communicates. Although the film does not delve deeply into any particular communication process, it does demonstrate the recurring need for such basic communicative tools as the telephone, radio, postal service, television, and the printing press. It also serves as a springboard for discussion in a variety of areas.

— O. E. Bissmeyer, Jr.

### Navajo—A People Between Two Worlds

(Francis Raymond Line, 5475 Eagle Rock View, Los Angeles 41, California) 18 minutes, 16mm, sound, color, 1959. \$150.

#### Description

This film, apparently narrated by an educated Navajo woman, describes the conflicts experienced by her people in facing the demands of a white-dominated society. Until now, day-to-day existence of the Navajo has centered around sheep-raising and, for the few fortunate enough to have irrigated land, a few acres of corn. Daily needs were simple and for the most part were met by the fruits of their own labor and ingenuity. At the trading post the Navajo bartered wool, hides, and jewels for the few items they were unable to make themselves. Life centered almost completely around the hogan, constructed of adobe and brush, wherein lived parents, children, grandparents, aunts, uncles and cousins.

Geographically the Navajo have

GENERAL TELEPHONE & ELECTRONICS

world leader in photographic lighting

been at a distinct disadvantage. Deeply rutted dirt roads over their 15,000,000 acres provide little access to doctors, schools, and civilization in general. Located for the most part in north-eastern Arizona, the high desert land of the Navajo is hot in summer and cold in winter. The thin layer of top soil is eroded by flash floods resulting from the infrequent but heavy rains. Now numbering about 80,000, the Navajo must find ways other than sheep-herding to support their rapidly growing population. Therefore, they welcome governmental and private development of petroleum, natural gas, and uranium resources discovered in and around their land. Here are opportunities for employment. But if the Navajo is to work for the white man in industry, he must be equipped by proper training. Indeed, he must understand not only the white man's language and skills but his ways of living as well. All this means that the Navajo must leave his traditional pattern of maturation in the hogan and attend government and other schools now being established.

Thus, the Navajo are indeed a people "between two worlds" and their situation is documented in the experiences of a boy who attends for the first time a government day school. True, he finds there remnants of the old way; his class makes a pet of a lamb. But there are also many new ways, new songs, new foods, and new health habits to be learned—all in face of his return each night to the

dirty, isolated hogan and to sheep-herding. Perhaps the parents experience even greater conflict, especially those who allow their children to spend nine months in a boarding school. On their return to the hogan in the summer these youngsters are sure to be dissatisfied; yet they must not be denied the preparation essential for facing the problems already upon them. In the final analysis these Navajo have the same potential and same rights as other Americans, despite the marked differences in cultural and racial backgrounds suggested in the closing sequence of the film.

#### Appraisal

Dealing with the problems of a minority group attempting to retain its identity in the face of assimilation, *The Navajo—A People Between Two Worlds* differs from most films on Indian life with their sometimes-exaggerated portrayal of war dances and ceremonials. Camera work for the most part is in line with the documentary purpose of the film; only the closing sequence is somewhat posed and overdone. While the narrative is hardly dramatic enough to do justice to the importance of the problem under study, the film as a whole is interestingly and convincingly done. Try-outs with a number of junior high school pupils convinced the committee that the film may make its greatest contribution at the senior high and college levels in courses with anthropological and sociological emphases.

— Jack Cousins

# AV IN THE CHURCH FIELD

by William S. Hockman

## Mid-East Film

Julien Bryan and his capable collaborators have produced an excellent film on the Middle East. This 25-minute color film begins with an animated sequence touching the art and history of this region; continues with documentary shots of social and economic conditions and their feudal settings; moves on to such themes as poverty, nationalism, urban progress, education, transportation, and commerce. Here is a film to inform the adult minds of church, college, and university people. It ought to motivate study, and it will enhance appreciation of Mid-East problems and possibilities. Recommended. From International Film Foundation, Inc., 1 East 42nd Street, N. Y. 17.

## The Third Moses

On the occasion of the 100th anniversary of Moses Mendelssohn's birth the elders of the city of Dessau in Germany, together with the leaders of the Synagogue, gathered to unveil a monument erected in his memory. "No son of Israel had ever been so honored in Germany. In all that he had done, Mendelssohn combined a great love for Judaism and a deep appreciation for the positive values of world culture."

"He loved all men — the Jew, whom he tried to show the way to modern life and thought, and the Christian, whose attitude he helped to broaden to include Jewish people as equals."

Thus we have two good reasons why the young people of synagogue and church school should become acquainted with this truly great man. Let us, who profess to believe in this kind of greatness and nobility, tell his story, show the light of love that lighted his life. As I write this, "Brotherhood Week" is being observed: would that in churches we could tell of such men; that in synagogues the story of comparable Christians was being told. This, indeed, would spread knowledge, the very soil needed to grow a crop of appreciation and understanding.

Yes, there is a third reason for using this 43-frame, color and sound filmstrip, selling for \$10.00 complete, and available from the UAHC, 838 Fifth Ave., New York 21. This filmstrip has

excellent technical qualities. The art is good all the way. The commentary is notable for its concise inclusiveness. As a dividend to all, this, the user's guide carries reproductions of the frames of the filmstrip. This facilitates study, and preparation. Highly recommended for church and synagogue AV libraries.

## Completes Prophet Series

By the recent release of four new titles, Cathedral Films, Inc., has completed its O.T. Prophets series. The titles are: *Jeremiah — The Reluctant Rebel* (54 frames); *Ezekiel — Man of Visions* (60 frames); *The Prophet-Poet of the Exile* (52 frames); *In The Fullness of Time* (42 frames).

The last is a summation of the work of the prophets and tells how they prepared the way and predicted the coming of the Messiah. The others we hear these Spokesmen for God thundering calls to justice, to repentance, and speaking softly of love, courage, mercy and the showing of kindness. The narrations are paired on two LP records, and the price is \$27.00 for the set. The art is good all the way, and the script and instructional notes make the guides especially useful. The target audience is young people and up. It is especially commended to teachers of religion in colleges and seminaries — to supplement lectures and study, not supplant them.

## The New Neighbor

I can love any neighbor that's far enough away. It's the one next door, or across the street, that puts me to the test. Besides, it's the ones that are different — in clothes, in customs, in language, in background, and in color that makes it hard. These thoughts will go through your mind, and all others who see the 80-frame color photograph filmstrip, *How Do You Love Your Neighbor?* It shows how some neighbors, children and adults, pulled a couple of boners when the refugee Radiches moved onto their street.

Recommended for use with Juniors and up; and especially good for camps, vacation schools, week-day and Sunday schools. Two-version script; from Christian Education Press, 1505 Race Street, Philadelphia 2, Pa.

## Without God

In his memorable, "The Man Without A Country," Hale tells us of the plight of Philip Nolan who resolved to live his life without a country. If I wanted to get a group of men and women or young people into a lively discussion of the general plight of any man without God I think I would most certainly use the filmstrip version of Hale's story — done up for us by Films For Education, 1066 Chapel Street, New Haven, Conn., and priced at \$15.00 for strip, record, and guide. This 20-minute color filmstrip has good content and art qualities. Users with and without imagination can find many uses for this filmstrip. Highly recommended.

## Four Presidents and The Bible

The other night my wife and I previewed a new series of four filmstrips. It was the series which the American Bible Society has just released, "The Bible and The Presidents." We liked them. We found ourselves entertained, informed, and inspired. If our reaction is anywhere near typical, this series will attain considerable popularity.

The research has been painstaking, and the writing careful. The commentary has been skillfully and effectively recorded on the four sides of two records. The running time is about 18 minutes each. Printed on the borders of the scripts are the frames from the filmstrip, making study easier. The art work is good throughout the series, and especially effective in *We Hold These Truths* (Jefferson) and in *A Man and His Book* (Lincoln). The other titles are *Inspiration To Greatness* (Washington) and *Doer of the Word* (Theodore Roosevelt).

Here is an excellent series for use in all kinds of youth camps, conferences, and retreats; in youth fellowships; in the Scouting program, and in jamborees. Because of the technical qualities achieved in them by their producer, Cathedral Films, Inc., we heartily recommend them. They are available from the American Bible Society, 440 Fourth Ave., New York 16, N. Y., and the price is \$25.00.

## Useful Handbook

While definitely oriented toward the school, at all levels, Philip Mannino's handbook, "A.B.C. Of Audio-Visual Equipment and School Projectionist Manual," in its second revised edition, will be more than worth \$1.50 to AV coordinators and committees in the local church. It contains 80 pages of sensible guidance on many facets of equipment construction, use and maintenance, many informing illustrations, and a score or more of good and useful tables and checklists.

This reviewer was amused a bit to note that the school field seems still to use the terms "silent slidefilms" and "sound slidefilms." Long ago the church field discarded these clumsy and non-descriptive terms in favor of filmstrip and sound filmstrip. A film can't be a slide, and a slide can't be a film, and, slides don't "film," and films don't slide! In due time, we predict, these odd-beat terms for filmstrip will be abandoned by the equipment and filmstrip producers who have persisted in their perpetuation. Along in 1946 some 19 terms were in use for "filmstrip." It's real progress to get down to four! Order this bargain-book from M. O. Publishers, Box 406, University Park, Penn.

## Quintet of Filmstrips

During the shooting of the 1959 Easter motion picture, *The Power of The Resurrection*, by Family Films, Inc., its subsidiary Family Filmstrips, Inc., availed itself of the opportunity to shoot stills from a series of five color filmstrips of such lavish beauty as to delight all those who prefer and enjoy this type of filmstrip art.

The titles are: *Peter's Failure*, 45 frames; *Peter's Victory*, 32 frames; *Cup of Sorrow*, 31 frames; and, *Day of Gladness*, 34 frames. The first depicts Peter's denial; the second his recovery of courage after the Resurrection; the third begins with the Last Supper, continues through the trial before Caiaphas, and the crucifixion. The fourth shows the burial, the earthquake, the visit of the women, the appearances in Galilee and the promise of the Holy Spirit.

The fifth, *You Shall Receive Power*, 30 frames, is designed more for devotional use and shows the power of the risen Lord over his followers. This, and the first four, are for use with Junior Hi and up. There is a helpful guide for the user and the commentaries have been recorded. Recommended. The first two, as a pair, are priced at \$16.50, The second two, as a pair, also sell for \$16.50, while the

## Guest Review

**Rev. David Blackshear, Pastor First Presbyterian Church, Hudson Falls, N. Y., reviews the 43-frame color and art filmstrip, *The Beginnings of The Bible*, by SVE**

This SVE filmstrip brings us an intelligently conceived and well produced "starter" for discussion or study of the Bible for laymen. It raises a number of basic questions about our Scripture, its inception, transmission both oral and written, and about its preservation. Particular reference is made to the Mosaic books, and prophecy of Jeremiah, with brief quotations from the Psalms and Micah.

The presentation of the origins of Scripture in the normal experience of people, and the preservation through oral and written media, is clear and convincing. In carrying out its main purpose — deepening our understanding of the Bible as literature through a description of the process involved in its transmission—this filmstrip makes a much-needed and often neglected emphasis.

It is quite possible, however, that the viewer might come away with the impression that the Bible is a book which records simply man's thought about God. God's part in creating Scripture is never answered at any deeper level than a simple statement that He 'spoke' or He 'commanded.' This may leave some dissatisfied even in a filmstrip emphasizing literature. God's part in this communication needs more emphasis.

The section about the forms of transmission — clay tablets, papyri, ostraca, etc. — is quite helpful. The illustrations are particularly clear, the essentials being highlighted and the background subdued and limited to the minimum. This quality prevails throughout the filmstrip, and the commentary is thereby enhanced.

Used as an isolated presentation, this filmstrip may leave the audience dissatisfied because it covers such a small area of the whole matter of the Bible as literature. Yet, this is as it should be. It is designed as an introductory part of a series, and is certainly accomplishes the objective of stimulating interest in a study of how the Bible rose out of the vital and vigorous experiences of the people of God.

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**The Vikings** — In full color, 47 frames, based on the Kirk Douglas production. \$7.50. With guide, \$7.80.

**A Lesson in Mythology** — Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$6.00. With guide, \$6.30.

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**Romeo and Juliet** — Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50. With guide, \$7.80.

**Richard III** — Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50. With guide, \$7.80.

**The Glass Slipper** — The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50.

**Alexander the Great** — Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50. With guide, \$7.80.

**Adventures of Robinson Crusoe** — In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50. With guide, \$7.80.

**Columbus** — Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$3.50.

**Hansel and Gretel** — In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50. With guide, \$7.80.

**Greatest Show on Earth** — In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50. With guide, \$7.80.

**Ulysses** — In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50. With guide, \$7.80.

# AUDIO

by Max U. Bildersee

The record industry continues to supply some unusual materials which schools can use profitably in instruction. And schools continue to expand the use of such materials to add to the variety of experiences offered to students everywhere.

*Audio Education Inc.* (American Book Company, 55 Fifth Avenue, New York) brings a starter record in music education which will interest many kindergarten teachers. "MUSIC FOR YOUNG AMERICANS — KINDERGARTEN" is designed to accompany the ABC textbook of the same title.

The recording brings more than fifty songs and song stories to the class room. The general areas covered, with some sample titles, are: "Home (My Tree House)," "School (Counting Song)," "Community (The Postman)," "Songs for Rhythm Band," "Transportation (Tugboats)," "Our World (Thunder)," "Song Stories (Old MacDonald's Farm)," "Action Songs (Robot)," "Animals, Birds, Fish (Little Redbird)," "Songs for Special Days (Our Flag)," and "Songs for Creative Movement (Galloping)." The selection and the performance are both worthy of commendation, for the voices of Helen Riddle and Paul Ukena are pleasing and unaffected, and the material is deliberately chosen to meet the needs of many different children and groups of children — and teachers.

This is intended for and can be used with the youngest beginning school students to introduce a variety of musical information, and to elicit wholesome response in participation. These are not materials just for listening, but rather require that the listening children join actively.

★

Moving up the ladder in music appreciation a most unusual album is offered as the sole production of the Music Education Record Corporation (Box 445, Englewood, N. J.).

This five record series of musical presentations involves the entire orchestra in several ways. To begin with, the families of instruments are presented. The strings, woodwinds, brass and percussion instruments are each heard in solo presentation in the hands of masters. Each instrument is demonstrated and its contribution to the orchestra is summarized.

The solo artists are first-chair men of such exceptional musical organiza-

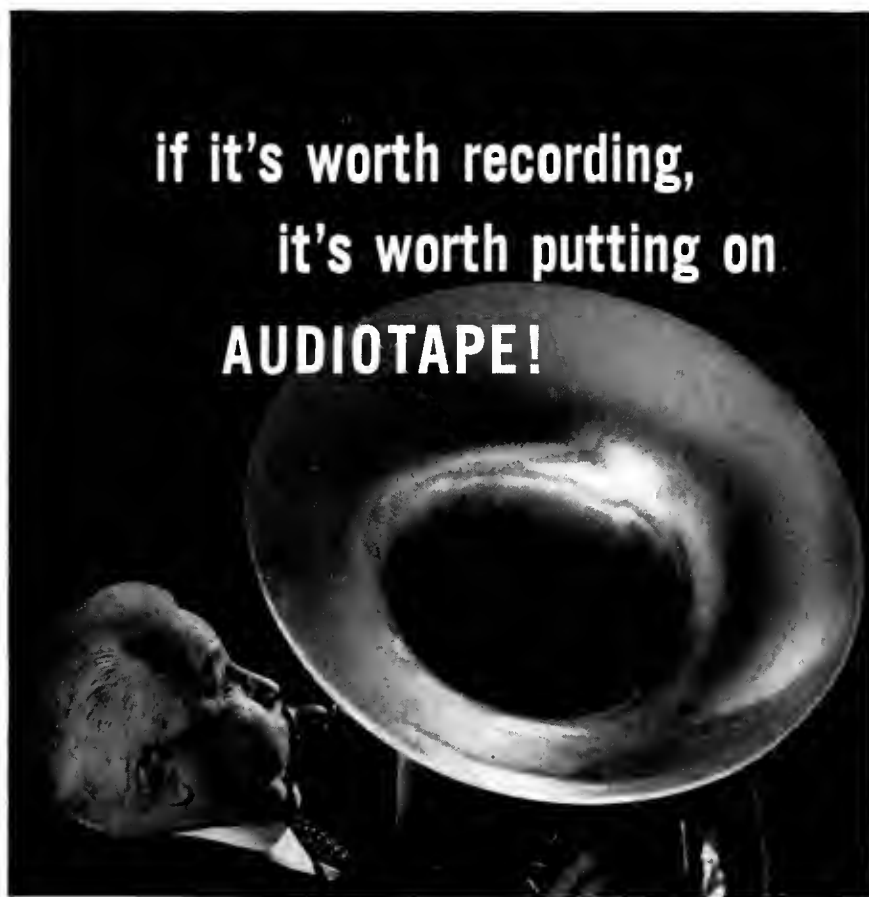

tions as the New York Philharmonic-Symphony, the Metropolitan Orchestra, and the former NBC Symphony of the Air.

The instruments are also presented in solo excerpts from compositions by such composers as Bach, Wagner, Berlioz, Verdi, Brahms, Rossini, Debussy, Mozart, Enesco, Mahler, Liszt and Grieg to name but a portion. In addition the "Wedding March; Coq D'Or" by Rimsky-Korsakov and Wag-

ner's "Prelude to the Third Act of Lohengrin" are performed by the orchestra.

The album features reliable historical data concerning the instruments, exceptional musicianship and sound instructional planning. This novel and useful lecture-demonstration album is intended for older, more mature listeners than is the first record reported. It does not rely on sugar-coating, whimsy or fantasy. The information is presented in straight-forward fashion. The casual listener will soon be lost.

The recordings are conducted by Wheeler Beckett, who has long been associated with fine music and with music education for young people. He has conducted the San Francisco Symphony Orchestra in its justly famous

if it's worth recording,  
it's worth putting on  
**AUDIOTAPE!**

A tape recording is no better than the tape used to make it. You can't get first-class sound from second-class tape. When you buy Audiotape, you know you're getting the truly professional quality recording tape . . . no matter which of the eight types you choose. Remember, there's only *one* Audiotape *quality*—the finest obtainable anywhere. And this single quality standard is consistent within each reel, uniform from reel to reel, type to type. It's your assurance of getting *all* the sounds—from the tuba's lows to the highest highs.

★

We have been seriously concerned these past few months with the many claims and counterclaims of educators, and non-educators, about the values and functions of education and of machines in education.

The contradictory studies which prove and disprove are not always sound research. All too often the reporter has begun by formulating a thesis, and then carefully culling information in support of a particular end. We suppose that, if the right studies were either consulted or undertaken, it would be possible to prove, for instance, that the teacher in the foreign languages plays a minor role in support of the recordings. **THIS WE DO NOT BELIEVE TO BE TRUE.** And if this were even a hintable reality, the need for teachers would be almost or wholly eliminated and foreign language instruction in the elementary school would today be a reality, a solid universal reality, rather than an experimental area en-

joying a tenuous position in the educational spectrum.

We don't for a minute believe that even the most rabid supporter of teaching machines believes that these can and will reduce either the cost of adequate or superior instruction, or reduce the expanding need for superior teachers everywhere.

Audiovisual personnel are too often tarred unjustly with the brush of mechanization. As the annual headlong rush to budget economies gets into stride, the audiovisual person is pressured into suggesting that perhaps films, or radio, or TV, or recordings, or something else can be used in place of good, sound, endless local curriculum adaptation and plain good instruction. Because the audiovisual director or supervisor is associated with the electronic machines of his age, he is too often called upon to be a gadgeteer, and to defend the gadget-minded layman who demands automation in education.

We were delighted to see that the NEW YORK HERALD TRIBUNE took an objective point of view in this debate in a recent editorial. They said, "Under a grant announced by the Ford Foundation, 250 students at Hamilton College will teach themselves French, German, mathematics, psychology and logic by machine in the next two years. They will use a box which flashes questions on a film and then marks the answers that the student feeds back. . . .

"Mechanical aids are important, of course, in this age when there are too many students and too few teachers. Films, tape recorders and TV sets can relieve the pedagogue of many chores. So can testing devices, which today can measure a student's ability better—and at an earlier age—than ever before. *But no machine can replace a live teacher.* (Italics ours). A French-teaching machine may know its grammar but it can't speak French; a machine that teaches logic can be bested in any debate.

"America needs teachers who can pique their student's curiosity and prod them to do their utmost. . . .

"Obviously there are big tasks ahead for the real, non-mechanized teacher."

To the same end, and with somewhat more humorous approach, is Allan E. Sloane's first act curtain in the play "May We Remember" which is published by the Department of Elementary School Principals, NEA. This play was presented for the first time at the Annual Meeting of the Department of Elementary School Principals, NEA, in March 1958 in Philadelphia. The portion which follows is presented with the permission of the copyright owners, and is un-

itled insofar as it is taken from the day.

The narrator has just described how the Board of Experts called a meeting to design a new kind of teacher—modern, up-to-date, with all the knowledge the teacher needs built into its electronic circuits. The choir responds: You don't mean—A machine!"

It even had a name UNIVAPP—The Universal All-Purpose Pedagogue—Model One. "Well," says the Narrator, "after they built in the circuits for all the ologies and ographies—and the three R's, they discovered their mechanical teacher had to do a lot of other things like—

'Read and grade the homework papers, Monitor study-period capers. Note with almost a doctor's ear The child who's slow—because he can't hear.

Plan the Assembly for Arbor Day Pour the tea at the P.T.A.

Answer the look in a parent's eyes That says, 'We never realized.'

Find thirty-seven different ways To say thank you for hankies on holidays.

Watch for the look, the faraway look That tells of the magic when boy meets book.

Recognize it, nurture the seed That blossoms in time to—'I can read!'

Get them to sing in at least *one* key 'O Beautiful,' and 'Tis of Thee.'

Seek through the day, the month, the term,

For the wonderful boy or girl who can *learn!*

The child only *you* can set right along The way to words, and numbers, and song.

Dry their tears and blow their noses Find their gloves, and zip their clothes!

The ones who're fast, the ones who're slow,

Help each at his own best pace to go. Then quietly face the task so hard—

Sum up a child—with a mark on a card!

Keep them in after, for making a fuss—

Then drive them home, 'cause they missed the bus!

Teach them, know them, every one Lose them forever when session's done.

Give them everything you know— Then—let them go. . . .

And what's your reward? The hope that you

May have kindled the spark and the courage in one

To nudge the world on—to millenium. Thus be it ever—the teacher's supreme.

True teaching can never be done by machine!"

There's an exciting new technique in foreign language study — and students everywhere are taking to it eagerly. Tape teaching method! In modern language training centers, native dialects on tape are the "textbooks", Ekotape recorders the "workbooks". And when students hear their own voices speaking a foreign "tongue", it becomes alive *immediately!* What a difference it makes in response, achievement. No wonder progress is *fast!*

Students and teachers alike are quick to appreciate the dependability of Ekotape recorders . . . the exceptional ease with which they can record and playback . . . the instant start-stop action. Crisp, clear tone eliminates fatigue, aids comprehension. Important reasons why Ekotape recorders have become an accepted standard in modern language training programs.

# FILMSTRIPS

by Irene F. Cypher

There have been times recently when we harbored a secret little hope that if Confucius' spirit were dallying in some nirvana of the hereafter that said locale was one in which he had to do a bit of meditation and penance for a sin committed. All this because of that oft quoted phrase "One picture is worth a thousand words." Many of the pictures used for educational purposes are absolutely worthless! It would be a good thing if the famous phrase referred to were consigned to the attic. Some of the pictures included in some filmstrips we have seen were not worth the basic stock on which they were printed, and words are not even adequate to describe their triteness and ineffectiveness as instructional media.

If we plan to use pictures as instructional devices they should really "show" something. There should be a unity or singleness of purpose in each picture that actually speaks, regardless of whether or not there is a caption or narration record. If pictures are a medium of communication, then they should communicate. We wish producers would remember the great value of close-ups; the value of "over-the-shoulder" views, so that a viewer can actually see what is going on; the value of seeing people and places from several different angles!

There is plenty of room for the production of more filmstrips *IF* they really provide a visualized experience that says something to the viewer. There is no room for, or excuse for filmstrips that merely provide more busy-work pictures.

## Aluminum

(single strip, color; No. 5 in the "Mining and Metallurgical Industries Series"; produced by National Film Board of Canada and available from Stanley Bowmar Co., 12 Cleveland St., Valhalla, N. Y.; \$5 per strip.) We take aluminum so much for granted today as part of everyday life that it is rather startling to be told that only one hundred years ago it was as costly as gold. The story of aluminum production, from the time of Sir Humphrey Davy's first experiments in 1807, is both fascinating and important. The sequences in this filmstrip show us where the basic raw materials to produce alumina trihydrate ( $Al_2O_3 \cdot 3H_2O$ ) are secured and how it is reduced and fabricated into various forms. Attention is focused on the fac-

tors contributing to making Canada the second largest producer of primary aluminum, but we also see this in relationship to the total world production picture. This is a very good filmstrip for use in science and chemistry units, and it also has value for social studies units.

## Impressions of Holland

(5 strips, color; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.: \$30 per set; \$6 single strips.) Holland is a wonderful country to visit, and this picture trip to Rotterdam, Utrecht, Gouda, Harlem, Amsterdam and Aalsmeer, the flower center of Europe, is truly a memorable one. The photographer has caught both the old and the new in his camera lens, and the over-all picture quality is excellent. Sequences dealing with the great flower bulb gardens are particularly interesting, as are the ones showing the traditional dress in several of the village areas. The places and people selected for our visit are shown in close-ups, which helps to make the story realistic. One gets a feeling of "liveness and vitality" so characteristic of both the land and its people. This is a series that should help to make social studies interesting and human.

## Journey Down the Great Volga

(single strip, color; produced by Life Filmstrips, 9 Rockefeller Plaza, New York 20, N. Y.) Like other great rivers, the Volga flows along past many places—cities, villages, farms; river boats of many types make the journey up and down the river, and the filmstrip takes on such a journey. In this instance we go with our camera man as a passenger on an excursion boat from Moscow to Astrakhan. En route we see how logs are floated downstream; we stop at the Moscow docks to watch passengers come aboard for the trip; then as the boat goes along we watch people in the river towns and cities. It is a kaleidoscopic view of Russia and Russian people, and it is up-to-date, for the photographs were taken in 1958. We see something of the new power plants and industrial centers that mean much to the development of the new Russian economy, and this is a good strip to use in social studies and current affairs work.

# VIEWLEX PROJECTORS are used in over 100,000 Schools

**Time Tested...**

**Time Proven In More**

**A. V. School Programs Than Any Other Projector!**

## The Viewlex v-25 Combination 35mm Filmstrip and 2" x 2" Slide Projector!

Reports from leading educators and A-V directors throughout the nation affirm the fact Viewlex projectors have provided the best service of all equipment in their schools. Here are a few reasons why—

**Simple Operation**—the easiest, quickest threading system ever devised! Just slide the film into the projector channel and it's automatically threaded.

**Sharp, Brilliant Pictures**—500 watt lamp in the exclusive Light Multiplier optical system give evenly distributed light to every section of the screen . . . brilliant images even in lighted rooms.

**Versatile**—Project single or double frame filmstrip, vertical or horizontal, or 2" x 2" and bantam slides. Switch from one to the other in seconds without fumbling or difficult mechanical manipulations.

**Cool, efficient operation**—Exclusive "Venturi-Airjector" cooling system means projector is always cool—even after long periods of use. Lengthens lamp life too.

**Rugged**—Performance-proven to take the punishment of constant school usage without breakdown.

Other Viewlex projectors available from \$50.25 to \$495.00. Ask your Viewlex Audio-Visual franchised dealer for a demonstration, or write for catalog.

All Viewlex projectors are **GUARANTEED FOR A LIFETIME.**

*World's Largest Exclusive Manufacturer of Slide & Filmstrip Projectors*

### Life Story of A Butterfly

(single strip, color; produced by Moody Institute of Science, 11428 Santa Monica Blvd., West Los Angeles 27, Calif.; \$6.) The value of filmstrips such as this is that they enable us to present large, close-up views of subject and specimens that are otherwise often difficult to observe closely, or for any great length of time. The life cycle and development of a butterfly are always matters of interest to boys and girls, and this filmstrip is particularly well photographed. The color quality is good and the developmental sequences clearly indicated. It is to be recommended for science and nature study units and for camping and scout groups.

### Our Caribbean Neighbors

(single strip, black and white; produced by Educational Activities Office, The New York Times, 229 West 43 St., New York 36, N. Y.; \$2.50 for single strip; \$15 for series of which this is a monthly unit.) The entire Caribbean area is definitely in the foreground of international affairs at present. In all countries of the area there are social and economic matters which have direct bearing of those of the United States and other countries in all parts of the world. Our attention is drawn in this strip to major policies and political trends and to unsettled social questions. A strong point is made for the fact that the island nations of the Caribbean are in a process of change and that there is need to reassess their status as strategic outposts. Well suited for use in study of international affairs and world history.

### Petroleum in Today's Living

(single strip, color; produced for the American Petroleum Institute and available without charge from the Creole Petroleum Corp., Educational Section, 1230 Avenue of the Americas, New York 20, N. Y.) This is the story of the machines which, using the products of petroleum, do most of man's work today. Machines have displaced animals, and machines must be supplied with motivation and power. When Col. Drake drilled the first commercially successful oil well in 1859, this source of power was provided, and the strip shows us something of what petroleum contributes to modern living. It does not go into detail about geologic formations or chemical processes; it does show the importance of petroleum to industry, making it good for science, social studies.

# New Equipment and Materials

For addresses of the sources supplying information on which these listings are based, refer to Directory of Listed Sources, page 269. For more information about any of the equipment announced here, use the Readers' Service Coupon on page 268.

## NEW EQUIPMENT

### CAMERAS

**Automatic Electric-Eye 35mm Camera.** Diaphragm set by light meter from f/2.8 to f/32; flash synchronized; single stroke lever film advance; drop-in loading; eye-level projected luminous-frame viewfinder with 3' and 5' parallax correction indicated. \$84.50. KODAK.

For more information circle 101 on coupon

**Three New Kodak 8mm Cameras.** Photo-electric automatic single lens 13mm f/1.9, built-in filter for using Type A color film outdoors, drop-in loading \$92.50; with three lens turret mounting also 24mm and 6.5mm lenses \$124.50. Restyled Brownie type Scopometer turret camera, with built-in exposure meter registering in the viewfinder, f/1.9, \$79.50. KODAK.

For more information circle 102 on coupon

### CAMERA ACCESSORIES

**Electronic Enlargers** give separate rendition of highlight and shadow densities by means of separate light-sensitive probes; a variable non-image-forming bias light supplements the variable modulation of the moving light beam from the cathode ray tube. Model B-5 takes negatives up to 4x5; Model B-10 offers negative capacity of 10x10". LOGETRONICS.

# Trade News

## All Space Sold at Trade Shows

Optimism on the part of audiovisual manufacturers and producers is reflected in the complete sell-out of exhibit space at both the DAVI and the National Microfilm Association April conventions. Livelier-than-ever demand is reported for NAVA space at Chicago's Morrison Hotel show in July.

## Language Lab Patent

Electronic Teaching Laboratories, Washington, D.C., announces a patent on its dual-track tape recording apparatus for foreign language training and other memorization learning; one channel with unerasable teacher-dictated lesson material, the other for repeated re-use by the student. The firm has installed 100 language laboratories for the government in 33 countries.

## Reduced Summer Rentals

Family Films announces a special June-July-August rental rate (\$5) on 24 modern theme films. While latest releases are not included, the announcement points out that no film is "old" for the customer who has not yet used it.

## French as She is Spoke

A new series of 40 sound filmstrips visualizes and brings to life the famous Berlitz French language course. New color photography, shot entirely in France, follows the long familiar "On the Plan," "Paris Taxi Ride," "At the Bank," etc. routines. More than 35 native speakers are heard in these multi-voice recordings. Vocabulary is based on conversational frequencies, and time-tested pauses are provided for student repetition. Structure, grammar and vocabulary developed through story situations, visual-

ized simultaneously on the screen in the form of lively incidents of everyday French life in natural situations and real surroundings. The material is arranged in eight sets of five strips each. The first set, lessons 1 to 5, include a novel concentric verb-finder wheel. Per set (\$5), \$84.50. If either the first 20 (\$338) or the entire 40 (\$620) are bought a Viewflex Model V-44 300-watt filmstrip projector is included as a bonus. PATHE-SCOPE.

For more information circle 136 on coupon

## Got a Match? Get a Picture?

Phenomenal speed is claimed for Agfa's new Isopan Record Film, 35mm, fully panchromatic, "so fast that photographs can be made by match or candle light." The film had its American premiere at the MPFDA show in Philadelphia, March 22-26.

## Ford Film Audience Up 22%

Ford Motor Company films were viewed by an audience of 32,811,930 persons in this country and overseas during 1958, an increase of 22 per cent over 1957. New 1958 releases included four travelogues, "What a Vacation!", "West to the Tetons," "Okefenoke Interlude" and "One Road," and an engineering film, "An Equation for Progress."

## TV on Tape

RCA unveiled production models of its new television tape reproducer at the NAB convention in Chicago, March 15-18. Improved cueing simplifies handling of tape material, whether 90-minute spectacular or 10-second commercial. Holds 7,200 feet of 2" magnetic tape, enough for 96 minutes of continuous recording. Color may be added by means of a single "stand-up" cabinet of equipment without modification of the original machine.

# MAKE YOUR OWN SLIDES

## with the new Tecnifax Slidemaster System

The Tecnifax Slidemaster System is an integrated process for producing Diazo-chrome multi-colored slides for overhead projection . . . from the original drawing through mounting of the slide. No special skills are required . . . rudimentary techniques produce dramatic, colorful, professional-looking transparencies.

**PROTO-PRINTER** . . . a compact, portable, platen printer, weighing only 37½ lbs . . . equipped with a readily-replaceable photo-flood lamp, controlled by an automatic exposure timer.

**"PICKLE-JAR" DEVELOPER** . . . a simple, trouble-free ammonia-developer, with a new, hinged lid for rapid, trouble-free insertion and removal of films.

**TECNIBOARD** . . . a basic component of the system, used for preparation of masters, as a platen for exposures, and for mounting of slides.

### FOR ADDITIONAL INFORMATION

For additional information and prices, please write to Section TS, Visucom Laboratories, Tecnifax Corporation, Holyoke, Massachusetts. Please indicate in your letter the nature of your interest in Visual Communication activities.

**INTRODUCTORY KIT** . . . contains enough Diazo-chrome film, mounts, and accessories to produce ten five-color transparencies . . . plus instruction manual and Diazo-chrome Color Guide.

**TECNISTAPLER** . . . special, heavy-duty stapling pliers for hinging overlays on dynamic transparencies.

# NO MORE AUDIO- VISUAL ROOMS!

Audio-Visual rooms (special projection rooms) are no longer adequate. The ambient light of the modern classroom must be quickly and easily adjusted to suit any subject, projector or student activity. LEVOLOR audio-visual venetian blinds can be installed in all classrooms to do just that.

With a LEVOLOR installation, the instructor can at any time and for any subject quickly and easily adjust the classroom light. There's no delay, no need for a special room assignment.

Write for Levolor's invaluable survey report "How Dark Should Classrooms Be For Audio-Visual Instruction?" No charge or obligation. Write to Audio-Visual Dept., Levolor Lorentzen, Inc., 720 Monroe St., Hoboken, N. J.

Be sure to specify

# *A Completely Mobile Educational TV System*

ANY CLASSROOM CAN BE A STUDIO WITH THE ETS-1

The new ETS-1 television system goes to class with the student. Never before has the versatility of a completely mobile closed circuit system been available.

In the studio for the first morning class, then down the hall for a special laboratory session — through standard 30" doorways — in standard elevators and in and out of the panel truck winding up back in the studio ready for classes the following day.

Typical advantages of the ETS-1 are: Complete flexibility of equipment; starting with a single camera chain and working up to the full complement of equipment is possible. Extremely high picture quality. Simplicity of operation. Ease of maintenance with slide out racks.

Plan your Educational Television program now around the new Dage ETS-1. Obtain professional quality with complete mobility.

*Write today for a descriptive brochure on the ETS-1 and helpful hints on how to plan your educational television system. Write: Manager of Educational TV Sales.*

## products for your A-V equipment

### PORTABLE PROJECTOR CABINET AND STAND

All steel, 42" high, 29" x 17" plywood top with safety rail. Gives over 11 cu. ft. for storage of projector, speaker, etc. Adjustable shelf. Safe-locking panel door. Four 3" casters, two with brakes. Baked enamel finish in tan or gray.

Model No. 42

### PORTABLE STEEL PROJECTION STAND

Four 3" casters, two with brakes. Height: 41". Stable, tapering design (19" x 31½"

at bottom) 18" x 26" at top. Rail on 3 sides. With non-skid rubber shock-proof mat. All steel, with 1" tubular steel frame. Baked enamel in tan or gray.

Model No. 41

Use individually! or stacked!

### TAPE AND FILM CABINETS

For every need . . . 5" or 7" tapes, film strips, slides. Cabinets are all steel, with full suspension drawers. Photo shows each type of cabinet stacked on handy Mobile Cart.

**YOUR INQUIRY promptly answered on above items; also, Film Storage Racks, Record Storage Cabinets, Phono Carts, Lecterns.**

# ON THE SCREEN

## Cover Scene

"New Faces of Africa" is the subject which provides the June cover picture. This film, developing the theme of growth and unrest in formerly undeveloped lands, is the 1959-1960 foreign mission study film of the Broadcasting and Film Commission, National Council of the Churches of Christ in the U. S. A., 220 Fifth Avenue, New York City 1. For further details, turn to the listing in the *New Equipment and Materials* section.

## July Convention Issue

Next month we will present a comprehensive lineup of the great NAVA

Convention taking place July 25-28 as well as program listings of the six concurrent organizational meetings: Educational Film Association; AV Workshop for Industrial Training Directors; Agricultural AV workshop; Religious AV Workshop; AV Conference of Medical and Allied Sciences and Association of Chief State School AV Officers. A complete exhibitor's list will be presented, along with a large array of new equipment and a cross index of manufacturers, distributors and all types of audiovisual equipment and materials. This should prove to be a helpful addition to our regular service, deserving of a convenient location on the audiovisual director's desk all year round.

## Last Call for Copy!

*Recently a mailing was sent out to manufacturers in this field, giving them the opportunity to be listed in our complete Guide to Sources of Audiovisual Equipment and Materials, and to display in print their newest products. If through some accident you did not receive one of these letters, you may still be listed in the July issue, provided information on the type of equipment and materials is in our hands by June 9.*

 Audio Visual... the  
**PROJECTO-PRINTER 30**

**Makes transparencies for overhead projection  
 from any source material... in minutes!**

Now, with the new Ozalid Projecto-Printer 30, you can prepare transparencies—on the spot—*without being a photographic expert*. Using any original visual source material... textbooks, manuals, charts—whether opaque or tracings—two-sided, or even book-bound... you can get dozens of new visual effects in black and white or color. You need no darkroom—no trays—no mixing of messy chemicals. The Projecto-Printer 30 is a simple, self-contained unit and the cost is low. The simple process takes mere minutes. Anyone in your office can make projectables in just a few easy steps.

Overhead projection gives you complete flexibility in planning and delivering your presentation. Use the projection stage as a "blackboard" for specific emphasis. You're in complete control—no need for an assistant.

# HAVE YOU HEARD?

News About People, Organizations, Events

At Florida workshop Jim Froberg, graduate student at Florida State University, demonstrates transparencies with the overhead projector for a group of teachers.

## Florida Group Holds AV Workshop

The Audio-Visual Section of the Florida Education Association presented a program for teachers at the annual meeting March 20, in Tampa, Florida. More than a thousand teachers listened to Dr. Irene Cypher and participated in the meeting. The first part consisted of a talk by Dr. Cypher on the "Importance of Materials in Teaching," and a visualized demonstration on "Display Materials" presented by Otis McBride and Bill Quinly of Florida State University. During the last hour teachers visited twenty-odd concurrent demonstrations covering a wide range of instructional materials. These included such topics as making transparencies, the polaroid camera, homemade filmstrips, puppets, arithmetic kits, Junior Museum materials, types of book bindings, the micro projector, school participation in fair exhibits, new science books, book illustrations, elementary science carts, elementary industrial arts carts, dry mounting, wet mounting, rubber cement mounting, vertical file and dioramas.

Response to the program has been enthusiastic, and the evaluation indicates that the AV Section will be asked to present programs for teachers at each annual meeting.

## Annual AV Workshop At Indiana U.

"Improving Learning Through the Use of Audiovisual Materials" is the theme of Indiana University's annual audiovisual conference-workshop, to be held on the campus June 22-26. Lectures, panel discussions, demonstrations and informal group participation are designed to be beneficial for all those interested in the educational use of audiovisual materials. Monday through Friday, the programs will be centered around: the curricular basis for the use of AV materials; techniques for making AV materials; suggestions for using AV materials; practical aspects of administering an AV program; evaluation of AV programs.

One hour of credit may be earned for attendance at the complete conference. For further information, write Dr. Carolyn Guss, Audio-Visual Center, Indiana University, Bloomington.

## Questionnaires Test Reactions to ETV

Henry S. Dyer, Educational Testing Service Vice President for Research and Advisory Services, and his assistant, Anne H. Ferris, have developed

an evaluation questionnaire called "Sizing Up Your School Subjects." The approach is indirect in order to get the students' unbiased reactions. All students in a given grade complete the questionnaires, those in experimental TV and control groups as well as those who have no connection with the study. Only the answers from the experimental and control groups are used in the analysis.

Topics under discussion include: the student's likes and dislikes in subject areas; ease of learning; time involved in studying and preparation; comparative usefulness of the subjects; how much the student feels he is actually learning.

## USF Opens New Language Lab

The University of San Francisco has constructed a sixty-booth, \$40,000 electronic language laboratory, under the direction of Father P. Carlo Rossi, S. J., member of the language faculty. Students will now spend two hours in class and four in the laboratory, where each student will be able to proceed at the level of his own ability.

## People in the News

Col. Homer F. Kellems, nationally known lecturer, educator, and director of photography for Eye Gate House Inc., was ambushed and killed by Algerian rebels early in March. He was on a photographic assignment with his assistant, William B. Hobbs (who survived), and had just entered the rebel-infested area of West Algeria from Morocco. It is thought that the rebels were ignorant of his nationality. Col. Kellems was the first American killed in the four-year-old rebellion.

John T. Hawkinson, manager of audiovisual services for the Illinois Central Railroad Company, Chicago, was elected president of the Industrial Audio-Visual Association at that organization's annual meeting in Chicago on April 28, 29 and 30. The retiring president is Frank B. Greenleaf, film supervisor for United States Steel Corporation's Chicago district.

**Kodak**  
TRADEMARK

*At the Sunset Heights Elementary School, selected by the A.A.S.A. for its exhibit of outstanding school designs, Mr. J. H. McBurney, Superintendent of the Webster City, Iowa, Community School District, says:*

**“...trouble-free performance, yet our film schedules really punish these Kodak Pageant Projectors.”**

“Our projectors must run constantly against a tight schedule, because we have only one week to show rented films throughout our entire district.

“Our ten Pageants stand up well against this grueling schedule, seldom needing service. Yet, when service is required, our Kodak Audio-Visual Dealer is quick to respond.

“We use Pageants exclusively.”

*One reason why Kodak Pageant Projectors stay trouble-free—they're built to keep an operator out of trouble.*

*No confusion: No parts for an operator to attach*

*incorrectly. Reel arms and drive belts, for example, are permanently attached.*

*Easy operation: No trouble-making threading problems. The film path is printed in red right on the machine. One try is all anyone needs to thread it properly without getting into trouble.*

*Permanent lubrication: No under-oiling or over-oiling problems. No need to keep lubrication records. Pageant Projectors are oiled for life at the factory.*

Ask your Kodak Audio-Visual Dealer to demonstrate. Or, for literature, write for Bulletin V3-22.

**Kodak Pageant Projector** } **EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

# With the Authors

ROBERT M. DIAMOND is presently in charge of the closed-circuit television experiment taking place in the Plain-edge High School, Long Island — the subject of his article appearing in this issue. For two years he taught in the Schenectady public schools, and during this time presented the TV series "From Og to Infinity" for the Mohawk-Hudson Television Council over WRGB. These programs were used in schools throughout upper New York State, Canada and New England in 1957-58. Mr. Diamond is also a member of many educational and audiovisual associations.

HARVEY R. FRYE serves as supervisor of the Graphic Arts Department of the Audio-Visual Center (which department he formed in 1948), and Instructor of Education at Indiana University. An authority on the production of inexpensive visual materials, he developed the first course in this subject in 1950, has written many articles on it, and has served as educational author for a series of films on the topic now being distributed by the University. Mr. Frye has given demonstrations of his methods before many audiovisual conferences and workshops.

EDWARD J. KOSELL is assistant principal of the Howland Elementary

School, Chicago. He has been an audiovisual coordinator for approximately three years, and is also a well qualified teacher of the educable mentally handicapped and adjustment. At present, Mr. Kosell is working on his Ed. D. degree at Loyola University.

J. ROBERT MURRAY, who has made a thorough study of the place of AV courses in the teacher training curriculum, is Associate Professor of Psychology and Education, and Coordinator of the Audio-Visual Center at the State Teachers College, Indiana, Pennsylvania. A member of various organizations, he is presently secretary-treasurer of the Pennsylvania Audio-Visual Association for Teacher Education.

DEPARTMENT EDITORS are: AUDIO—Max U. Bilderssee, audio education consultant, state department of instruction; AV IN THE CHURCH FIELD—William S. Hockman, Director of Christian Education, First Presbyterian Church, Glens Falls, N. Y.; FILM EVALUATIONS—L. C. Larson and Carolyn Guss, both of the Audio-Visual Center, Indiana University, Bloomington; FILMSTRIPS — Irene F. Cypher, Associate Professor of Education, New York University.

The **KEYSTONE** Standard Overhead Projector  
is available for purchase under the

## National Defense Education Act

The Keystone Standard Overhead Projector is designed for the projection of Standard (3¼" x 4") Lantern Slides, Polaroid Slides, and Handmade Lantern Slides or, with appropriate accessories Tachistoslides (4" x 7"), 2" or 2¼" Slides, Strip Film, and Microscopic Slides.

It is useful —

In the Science Category with appropriate units of slides in Physics, Biology, General Science, Health, Hygiene, Physiography, and Elementary Science.

In the Mathematics Category in teaching Number Combinations tachistoscopically; Solid Geometry with Stereograms.

In the Modern Languages Category in teaching French and Spanish with Tachistoscopic Units.

Write for Further Information or a Demonstration by our Local Representative. **KEYSTONE VIEW CO.**, Meadville, Pa. Since 1892, Producers of Superior Visual Aids.

It's been a whole year since we've said anything about daylighting. Daylighting, you know, is that practice formerly advocated by glass companies and some school architects which brings so much daylight into the classrooms you can't use them to teach in. At least you can't teach with audiovisual materials; and you and we know that's the best way to teach.

Last year we cried out in protest to an advertisement pleading for classrooms flooded with sunlight, built with "the largest possible areas of glass to gather in this light . . . clear glass from floor (or window sill) to ceiling, and room wide." Though it was a beautiful four-page full color ad, we didn't like what it had to say. From our point of view it was completely in conflict with our beliefs about instruction.

We suggested that you write the company and tell them the facts of audiovisual life. Whether you did or not, they've learned. We report progress — both in glass making and in ad writing. They now recognize the need for audiovisual materials in teaching. This is heartening. What's more, they've got a new kind of glass for windows that permits you to use just as much as before, but this new glass blocks out 55.8 percent of the light. That is progress.

Let me tell you more about the current ad. It's six full color pages this time telling about San Angelo Central High School in San Angelo, Texas. It's a campus type school of eleven buildings. Truly it is one of the most beautiful high schools we've ever seen or seen pictured. Teachers, administrators, pupils and architects quoted in the above ad have only highest praise for this magnificent school plant. Even though glass has been used for both interior and exterior walls, you can use audiovisual materials and equipment.

Superintendent Wadzeck in an interview for the ad said, ". . . in many places you can see right through the buildings because of the glass." The questioner then asked, "Doesn't that interfere with the use of visual aids?"\* The reply was positive and direct, "Not in the least. The plate glass in the outside walls is a low-light-transmission type and we have drapes for the interior walls. We have invested over \$10,000 in a variety of visual-audio (sic) equipment and use it *all* effectively."

Now, isn't that something! We were delighted to see this recognition of the place and importance of audiovisual instruction in an advertisement for glass. Furthermore, there was no emphasis on daylight. In fact, whereas the word "daylight" had been used a dozen or more times in four pages last year, I could find it only twice in this year's six pages.

I read every word, too. Especially intriguing is this apparently new idea of low-light-transmission type glass. They point out that ordinary quarter inch plate glass transmits 89.1 percent of the daylight. This new kind is neutral grey in color. It lets in only 44.2 percent of the light. This results in reduction of glare and brightness.

Now we don't know a thing about glass making, but if they can do this, it would seem that their research divisions could carry progress further. Surely they should be able to develop black plate glass that would transmit only 00.2 percent of the daylight! This then could be used as an alternative to audiovisual blinds and dark shades. And *then* they could run those beautiful six page advertisements in audiovisual magazines and we wouldn't have to tell you about them anymore! You could read them yourselves!

\*Apparently they didn't know that the term "visual aids" is no longer used in the best audiovisual circles.

# Progress Report on Glass

*Paul C. Reed*

by Robert M. Diamond

# Television as a Teaching Tool

ON September 4th, 1958, an experimental project in educational television was begun in the Plainedge school system. During these months we have seen the medium develop into an outstanding teaching tool. Every department within the junior and senior high school has used television to enrich, improve and diversify the instruction.

The Plainedge school system is typical of Long Island schools, in that it is located in a strictly residential area with all the tax and heavy population problems that this implies. What is atypical is the administrative approach to television. Several years ago, when plans for the new high school were first submitted, there was included a complete master antenna system that would reach every room within the building. Also included in the plans were a studio and control for a closed-circuit originating point. Although a separate sound system for the television broadcasting would have been preferred, it was far more practical and economical to use the schools central P.A. system.

The early planning for the television program was done by the supervising principal, the assisting supervising principals and the high school administrators. Their recommendations were then passed on to the school board for approval. Once the board had approved the project, the

administrators looked around for a coordinator. What was needed was an individual with both educational and television experience, who would be able to help the further conceptual development and then be able to run the program.

The previous year I had been fortunate to have been chosen by the Schenectady school system and the Mohawk-Hudson Television Council to produce a program over WRGB for the schools affiliated with this group in New York State, Canada and New England. With this background plus several years of teaching and work in Audiovisual aids I was able to qualify for this position—a job that has given me excitement, creativity and enjoyment that I have never before experienced.

As the plans for the new school were developing, so were the concepts that would later shape the programs themselves. It was decided that at Plainedge, television was to be used as a *teaching tool*. The purpose of the project was not to save teachers, but to raise the teaching level by bringing to them new methods and additional resources.

With the development of this concept came a basic pattern of the equipment that would be needed. The equipment had to be simple, as it was going to be completely student operated and maintained. The control system would have

During a program on Japanese culture, a student inside the control room selects the camera picture that will go on throughout the school (as shown in the small set, center). He also controls the Zoomar camera.

to be limited to as few operations as possible and all this would have to be done within a limited budget.

After investigating all the equipment that was then available it was found that there was none that would serve our purpose. At this time it was decided to see if it were feasible and possible to have our equipment custom designed to meet our needs. We found a company in New York City who could supply us with highly effective equipment, custom designed for our needs and within our budget.

Then came the realization that to be of greatest use the entire setup would have to be portable. From this evolved the equipment that we now have. In constant use are two independent, basic camera chains. Each is equipped with an automatic light compensator. One camera is student operated while the other is remotely controlled from our control console. This remotely controlled camera also is equipped with a three to one Zoomar lens. We can now televise from any room in our building to any other. Within fifteen minutes our complete television network can be moved to another part of the building. One camera may be used to televise to the rest of the school while the other is moved into a classroom with several receivers (we have twelve, all mobile) for use within that room alone; the camera can be operated by the instructor without student assistance. The teacher uses controls in this situation.

Here is a review of the steps involved in the organization of the closed-circuit television program in a high school. The administration decides what the needs of the school are. Can television help meet these needs? If television can meet these needs, what will be the basic objective of the project? What will be the cost of such a program?

Suitable information must be prepared to be submitted to the school board for approval. Once approval comes, personnel must be hired to put the project in operation. A constant re-evaluation of the project is carried on to see if the objectives are being met.

After the designing of the equipment was complete it became necessary to face the problem of making sure that our programs fit the basic aim of being teaching tools. To do this it was imperative that each program be designed to fit a specific part of the course syllabus and that it would reach the students at the exact time that area was being studied. Over the period of time this project has been in operation three different types of programs have evolved. Each meeting our requirements, but each meeting them in its own way.

First, there is the type of program that brings to the classroom resources that otherwise would be unavailable. A majority of our programs are of this type. We have had the cooperation of businesses both large and small, foreign countries, teachers and outstanding personalities. We

A model of Leonardo da Vinci's "file cutter" is used in an introductory program to science and invention in the junior high school. At left is Dr. Roberto Guatelli, da Vinci authority from IBM, which provided twenty working models of the latter's inventions. In the center is the author and at right the camera operator watches the studio monitor for focus and lighting.

have found that by using television and thus reaching a greater number of students we have been able to have this cooperation that otherwise would have been impossible. We have also been able to make better use of the skills possessed by members of our faculty. Now many students may receive the benefits of projects and special presentations taking place within other classes in the same subject area.

The second type of program enables teachers to present material in a much more effective manner than ever before. For our biology classes we now move the remote controlled Zoomar camera and four receiving sets into the classroom. For the first time every student in the class can follow along in a dissection step by step with the instructor by watching the screens. Gone are the days when several groups, one at

a time, came up to the desk, watched a demonstration and then went back to their seats to work. Now an entire class period can be spent on this presentation. Every student has a front seat, every student works on the same thing at the same time. By using our high magnification lenses it is possible to fill up the entire screen with the smallest of objects. Electronics classes for the first time are learning to take apart and put together a switch that up to now has been too small for more than one student to see demonstrated at a time.

The third type of program, while not as common as the first two, is still an extremely important one. A library orientation that at one time would have taken close to a month, with one class going to the library at a time, was completed in less than two days. By televising from

the library into the English classes we were able to reach all 2,200 students and yet free both the library and its staff for other activities. The administration used television for their orientation programs also. By this method information reached the students in a better way and at the same time saved both time and effort.

As is true of many things, the television project is only as good as the programs themselves. The programs at Plainedge are unique, not only in the areas they cover, but also in the way they are developed. There is no such thing as a regularly scheduled program. The programs are done only if they are requested by a teacher or a department. Rarely will a class see more than two or three television programs a month. We program for every department in the school. We mold our programs to fit the classroom, not our classrooms to fit the program.

At the beginning our teachers were skeptical. We had many who had had previous experiences with educational television that were not pleasant. For this reason programming was started at a slow pace. All of our earlier programs started from within the television department and were then offered to the individual teachers. Whenever possible we tried to get individual teachers to help us with the programs. At first this was not an easy task.

The change that we were looking for, where the teachers would themselves design the program, started with a series of three programs on the elections. These programs were done at the request of, and under the guidance of, the Citizenship Education department. The first program had a representative from each major party discussing the "Grass Root" politician. This program was followed by two others where the candidates for office were interviewed by students from the classes receiving the programs.

This series brought us two important firsts. For the first time a department was almost entirely responsible for a program. By suggesting the programs, by arranging for the speakers and by having students from the classes ask the questions the teachers were able to have these programs cover exactly what they wanted them to.

These programs also gave us the first opportunity to use the school's intercom system for a question and answer period. Mid-way through the program we allowed time for classroom discussion and during this period the rooms were able to call in questions for the speakers. This gave the teachers another opportunity to have what they wanted covered.

The election series was a turning point in the programming at Plainedge. We have now reached a point where our programs are developed in such a way as to meet the objectives of the television project raised long before school opens.

The basic idea for a program will usually come from a teacher who will mention that televising a specific area would be of great help. At this point I will usually check with other teachers in the field and see if this program will fill the needs of many classes. I will find out if the program fits directly into the course of study for which it is intended. If the program would not be directly related, or if he or she is the only teacher who can use the pro-

gram at that time, the idea will be dropped.

If there appears to be a demand for the program the next question is, who should do it? Should we bring in an outside resource or do we have in the school a teacher who could handle the program? Often the teacher who had the idea for the program will have a specific person in mind. At least one person from the department will work directly with me on the program until completion.

If an outside source is needed I will usually make the initial contact. If, for example, industry X says that they will be glad to help us with a program, a meeting is arranged. At this meeting there will usually be representatives from the industry, the teacher who suggested the program, the department chairman and myself. Before the meeting takes place the teacher and the chairman will have contacted the other teachers who will be able to use the program. The objectives of the program, what they wish included and when the program should be scheduled as to tie in directly with the subject area are discussed beforehand.

At this meeting the teachers will find out if industry X will be able to do this program for us. If the answer is affirmative a tentative program is set up. At this point the representative must return to his company to see if they can meet the requirements of the department.

Several weeks later I receive a plan for the program from the industrial representative. If this outline does not meet the wishes of the teachers the program will be dropped at this point. During this period there will of course be much communication between the school and the company. If the department is satisfied with the suggested program the teacher working with the project will now make up an outline for all the teachers in the department. I would like to mention that several programs were cancelled when they were not available at the exact time they were needed.

This outline for the teachers will include objectives of the program, when it is being televised, by whom, content as it relates to the subject area, suggested pre and post program activities and often a list of materials that industry X has made available for the use of the teachers in connection with the forthcoming program.

It is now up to the teachers. If they wish to use the program a form is filled out which insures the teacher that a television set will be in the right room at the right time. In all cases programs are repeated so as to reach the greatest number of students as possible.

Briefly this describes the Plainedge program. We believe we are doing the right thing, but we are not sure. To see if we are meeting our objectives Dr. Roscoe Brown of New York University is researching our entire TV program. Results of our early research will be available shortly.

This type of programming has had direct implications throughout the school. The principal object is of course, the improving of instruction. We believe this object is being met. We are constantly reaching for more effective and enriched teaching. By using closed-circuit television as a teaching tool we feel that this is taking place.

# Techniques for Making Transparencies

**T**HROUGH the years people depending upon visual methods of communication have depended strongly on collections of pictorial materials called tearsheet files or "picture morgues." Most of the material is taken from magazines, brochures, newspapers. These picture files form an extremely valuable source of material to be used for bulletin boards, flannel boards, still picture sets, etc. Frequently enlargement of this material is desirable. Some teachers have taken the pictorial material, mounted it carefully, eliminating unwanted content, and photographed it either on black and white or color film, and made it into slides. Use of the slide projector or the opaque projector of course magnifies the material on the screen to a size that will permit the entire class to view the picture content all at one time. Giving these picture files a flexibility in use is extremely important when a teacher desires varied approaches in her method of communicating.

With the increased use of large size transparent overhead projectors, experimentation began in trying to convert pictorial material from the magazine page to a projectable transparency. A great many approaches were made to this problem. A number of years ago commercial artists found they could remove type from printed pages with transparent tape. Others found they

could transfer ink from a printed page with a combination of soap and turpentine. Through a combination use of rubber cement and special liquid plastic in an oven, an exciting method of transferring printed images on glass evolved. The results were excellent, but the process was long and involved. Specially coated frisket paper used by artists was found to "lift" the image from the surface of clay coated paper. (See *Educational Screen and AUDIOVISUAL Guide*, February, 1955.) Due to the translucency of the base material, good projection was slightly hindered. Consequently, rubber cement was used directly on clear acetate. If done carefully by a person with experience, good results would occur when conditions were favorable. The resulting transparency had to be protected and transparentized with the use of a clear plastic spray. Even at their best these transparencies are very tender and can easily be damaged by careless handling and high temperatures.

Through all this experimentation, then, various methods have evolved. One which has proven extremely successful involves the use of heat and pressure. A specially prepared transparent film called Transpara-Film<sup>1</sup> has been developed primarily for converting printed materials to a projectable form. Transpara-Film is a clear acetate coated with a dry adhesive which, when heated and placed under pressure, will adhere

Choose a picture of good quality.

Test for clay-coated paper.

Trim film to size of picture.

to the printed surface of a tearsheet. After the film has adhered tightly to the picture surface it is placed in water. The water soaks through the paper, releasing it from the acetate and leaving the printed ink surface tightly impregnated into the special adhesive surface of the film. This then makes the image transparent and projectable. The resulting transparency is far more resistant to abrasion and heat than the older rubber cement type transparencies.

With the ever increasing use of tearsheet materials in the teaching situation the dry mounting method of mounting pictures has become popular. This same dry mounting press also provides the necessary heat and pressure for the above Transpara-Film process.

The following steps give a brief description of how this process is possible.

A. To obtain good transparencies by this method it is important to choose a picture of good quality with no abrasions or wrinkles on its surface. It is important to realize that the resulting transparency is the same size as the original picture. Thus, this system will lend itself to the making of the larger size transparencies for overhead and  $3\frac{1}{4} \times 4$  projectors. Since projection will magnify the printer's screen and blemishes in the original it is never advisable to make slides smaller than  $3\frac{1}{4} \times 4$  by this method.

B. For this system of ink transfer to work properly, it is important that only pictures printed on clay coated paper be used. By taking a wet finger and gently rubbing over an imprinted area of the page, the moisture will dissolve the white clay surface. If the paper is clay coated, a white residue should form on the tip of your finger. If this appears, it is quite safe to assume that the ink will be transferable.

C. Trim the picture slightly larger than de-

Dry out picture.

Assemble "sandwich" in above order.

Place film-picture combination in soapy water.

Peel off paper backing.

Wash off remaining clay and paper fiber.

Spray film for greater transparency.

sired and cut a piece of Transpara-Film the same size or slightly smaller so that none of the film will extend beyond the edges of the picture.

D. To assure a good transfer it is important that the picture contain no moisture. Any moisture may be removed by placing the picture in the warm dry mounting press for a few seconds.

E. The press must be set at a temperature of 270° to make transfers. Too little heat will prevent the film from adhering while too much heat will cause blisters to form. To assure good all over pressure and heat a special combination or "sandwich" of materials is important. Most of the elements of this sandwich are readily available in most communities or they may be obtained in kit form. The elements are as follows: (see accompanying diagram)

1. A sheet of masonite to increase press pressure.
2. A smooth piece of metal. (A photographic ferrotype tin is excellent for this purpose.)
3. A sheet of felt.
4. The printed picture facing upward.
5. Transpara-Film with adhesive side against face of printed picture.
6. The last element, another smooth metal sheet with smooth side against film.

Now place the entire "sandwich" into the dry mounting press for 8 to 10 minutes.

F. Place the film-picture combination in soapy water for five to ten minutes. This may require longer time depending upon the quality of clay coating, etc.

G. When water has penetrated the paper surface, pull off the paper backing. Sometimes it pulls off easily; at other times it may have to be removed a small section at a time.

H. With a piece of cotton or a soft rag wash off any remaining white clay or paper fibers or you will not have a good transparency. Wash off any soapy water and allow transparency to dry. Throughout the process the film may have had a tendency to curl. Never force the film to flatten out for you may damage the adherence. However, after the transparency dries it will be relatively flat.

I. Although the resulting transparency will project, an even better projection can be obtained by giving the ink side of the film a light coat of clear plastic such as clear Krylon<sup>2</sup> spray. A light coat of vaseline will also help transparentize the film.

J. The transparency is now ready to mount as desired.

It is important at all times to work cleanly. Dust and lint will cause blemishes if allowed between film and picture surfaces. It is possible to transfer a picture exactly as it exists on the printed page if instructions are carefully followed.

Through the use of this system a great many new and varied materials can be made from your picture file for projection, and for use on light boxes and in diaze reproduction.

# AV Courses for Teachers

Prospective teachers need to practice with modern tools of teaching.

by J. Robert Murray

**H**OW essential are courses in audiovisual instruction? Are they necessary, valuable, a waste of time?

In 1949, at a conference of fifteen specialists in teacher education and audiovisual instruction held at the United States Office of Education, our recommendations were made as being of prime importance at that time. They were:

1. That teacher education institutions must make certain that their graduates were prepared to use audiovisual materials in their teaching.

2. That such institutions which did not then have audiovisual centers should establish them and use them as laboratories for materials distribution.

3. That they should take the responsibility for helping school systems with in-service educational programs with special reference to audiovisual materials.

4. That teacher education institutions should make use of the most effective instructional materials.<sup>1</sup>

In 1956, not quite ten years later, Benda found the belief prevailed among New Jersey college instructors that students entering the teaching profession could obtain the necessary training in the use of audiovisual materials through incidental classroom procedures rather than from specific courses on the subject.<sup>2</sup> This belief is so prevalent

in Pennsylvania at the present time that there is a move on to reduce the present course allotment time or to absorb the audiovisual course into other methods classes.

## I. College Staff Opinion Of The Audiovisual Course

A general indication of what teachers college instructional personnel think about the audiovisual course is exemplified in the following example. An audiovisual instructor was approached by a fellow teacher and asked if it would be possible for a student to skip the audiovisual course. It seemed that the boy could already operate most of the equipment. But what does research tell us concerning the pre-service audiovisual course in teacher education?

## II. Research Studies In Audiovisual Education

### A. *Beginning Teachers' Needs*

White found that school supervisors in the state of Wisconsin believed that beginning teachers should be fully prepared to use audiovisual methods when they leave college. They wanted teachers they selected for their schools:

1. to be acquainted with the materials that apply to the teachers' own fields,
2. to be competent in the mechanical aspects of the materials,
3. to understand and appreciate the pedagogical values of audiovisual methods, for producing a

more effective learning situation,

4. to know how to use audiovisual materials so as to achieve more effectively their inherent values and

5. to know how to evaluate the methods and results they produce.<sup>3</sup>

The audiovisual specialist would be the first person to concede the difficulty in meeting these objectives, and yet these are the major purposes of every well organized basic audiovisual course in the country.<sup>4</sup>

In conclusion it would appear that the majority of these students felt that the course should be offered for three credit hours to permit better coverage of certain skills and techniques which they thought of potential usefulness when they started teaching. They also felt that the course should immediately precede practice teaching.

### B. *Utilization of Materials*

White found in his study the following items:

1. That as a group (only two had taken an audiovisual course) the teachers surveyed did not use all of the audiovisual materials at their disposal.

2. That those teachers who did use the six common methods surveyed did not perform at the highest levels of usage.

3. That teachers were cognizant of their own deficiencies in the area of audiovisual methods, but only to the point where their

knowledge of the methods would allow them to realize and recognize their deficiencies.

4. That the in-service training programs now found in schools such as those contacted in the study cannot be depended upon to provide competency in the area of audiovisual methods.

5. That all people contacted in the study, teachers and administrators alike, were eager to have teachers better prepared to use audiovisual methods.

In conclusion White recommended that each pre-service teacher take a complete and separate course in audiovisual instruction.<sup>4</sup>

#### *C. Teaching Competency and Utilization of Materials*

Camp found in his survey in New York State that, in general, *there is a significant positive relationship between administrators' ratings of teacher competency and the extent of audiovisual utilization.* Although he found no significant relationship between the level of audiovisual training and administrators' ratings of teacher competency, *there was a significant positive relationship between the level of audiovisual training and the extent of audiovisual utilization in the group studied.*

Teachers judged as most competent may or may not have had formal audiovisual training, but they are much more likely to use audiovisual materials extensively than those teachers rated average or poor. The teachers surveyed, in general, felt that the extent of use of audiovisual methods by the faculty in their teacher preparation institutions had some degree of influence on the extent to which the teachers themselves utilized these materials.<sup>5</sup>

This perhaps proves the old adage that we teach, not as we are instructed to teach, but as we have been taught. In one of the state teachers colleges of Pennsylvania, it was found that approximately 21 percent of the total teaching staff had taken an audiovisual course within the past fourteen years. Less than 10 percent of the faculty had taken a graduate course in audiovisual during this period of time, and approximately 20 percent of those that had taken a course were training school staff rather than regular college classroom instructors. This survey may be typical of the United States, but it is doubtful, since Pennsylvania has required audiovisual training since

about 1940 and many of the staff members are Pennsylvania graduates. It may be that in other states where audiovisual is not required, the percentage *would not* be this high.

This is not a criticism of the institution, the teachers or their alma maters, but points out the real need for good in-service audiovisual training within teacher education faculties. The remarkable part here is that many of these teachers have taken their time and made great effort to acquaint themselves with these modern tools of communication, rather than be content with the traditional lecture method. It is disturbing that a situation such as this exists in teachers colleges where the personnel involved may determine, through their curriculum committees, what courses should be taught.

Camp also found that the majority of teachers and administrators surveyed indicated that they favored a basic course in audiovisual instruction as a requirement in the teacher preparation curriculum. Of the school administrators surveyed, 97.6 percent felt that this basic course should be required of all classroom teachers.<sup>6</sup> It is worthwhile to note that the administrators' judgments regarding the content of a basic course in this area were in general agreement with the recommendations of the National Education Association and with standard texts in the field. This means that the course would have to meet on the average of three clock hours per week for a full semester in order to cover adequately the goals previously discussed as being basic.

In connection with Camp's study, a step in the right direction has recently been completed by The Pennsylvania Audio-Visual Association for Teacher Education. For several years the members have been working among themselves to prepare a basic audiovisual course of study for all teacher education institutions. The Pennsylvania Department of Public Instruction is publishing and distributing the outline. This is strictly a voluntary course of study, but if it is followed by each teacher education institution, Pennsylvania can be assured that all graduating teachers have had the opportunity at least of studying what is considered most important in audiovisual education.

#### *D. Audio-Visual Course Weaknesses*

Benda's study in New Jersey

pointed out weaknesses which seem to be typical of many regions in the U. S. These were:

1. That beginning teachers were not fully aware of the various media's contribution to the teaching process.

2. That broad understandings of the various media were deficient in some students even after a preliminary course in audiovisual.

(It may be pointed out that with a class which meets for an hour's credit on Saturday, it is the remarkable teacher indeed who can meet the prescribed goals of audiovisual education.)

3. That there was no established course of study.

4. That classes were too large.

5. That equipment was lacking.

6. That instructors were too busy with other courses or college duties.

7. That the audiovisual courses emphasized operation of equipment rather than effective selection and utilization.

8. That students were not afforded sufficient opportunity to observe the use of the various media in actual practice. (Too often these methods are only used in the audiovisual class as demonstrations, but never witnessed in other college classes.)

9. That colleges have not stressed the importance of audiovisual materials as an integral part of teacher learning processes.

*In conclusion, Benda recommended that students must not be expected to receive all their training in the use of audiovisual materials from other methods courses. Certain understandings and skills are taught only in audiovisual education courses.* He goes on to say that the basic pre-service course should meet three times per week for one semester.<sup>7</sup>

#### *E. Utilization of Materials in Adult Education*

In a study dealing with over 5,000 teachers in the public adult schools of California, Harris found some results very similar to the previous studies. Teachers with audiovisual training used the main materials in ratios of from two to one to three to one over teachers without formal audiovisual training.

*A very important finding was that teaching experience had no significant effect on the usage of audiovisual materials.*<sup>8</sup> This points out the fallacy of many college professors' viewpoints that the beginning teachers can acquaint themselves with these "audiovisual aids"

after they get out into the field and gain the necessary experience.

### III. Audiovisual Training — Separate Course Or Integrated Into Other Methods Courses?

With the impetus of visual sensory methods back in the early 1920's the question arose: should the courses in visual instruction be separate or should guidance be offered in special methods courses?

At first the recommendations by such leaders as Freeman<sup>9</sup>, Anderson<sup>10</sup>, Gregory<sup>11</sup>, and McClusky<sup>12</sup> were that the subject should develop within each methods course. However, by 1932 McClusky had modified his original recommendation to state that a separate course was necessary for emphasis.<sup>13</sup>

Yeager, in discussing the work offered at the University of Pittsburgh, made the statement that "Since methods courses do not place adequate emphasis on the use and care of visual-sensory aids, separate courses are necessary so that every prospective and in-service teacher will be brought in direct contact, through participation and application, with visual-sensory aids developed sequentially and practically applied."<sup>14</sup>

### IV. Future of Audiovisual Education

What will the teacher competency in the field of audiovisual education be twenty-five years from now? This is one of the most important present day problems.

Noel points out that even now the quality and variety of audiovisual materials greatly outflank teacher competency in effective use of them. There is statistical proof of our failure to use even a small percentage of educational radio programs. Everywhere you turn there is a valuable source of pictorial materials, yet teacher use of these materials is very limited. Developing teacher competency in the use of these materials is a responsibility of both teacher education institutions and school administrators.

The problem has two aspects, in-service and pre-service training. Teachers colleges have the primary responsibility for the pre-service aspect. Indications are that teacher education institutions are beginning to recognize the problem. The future will bring courses, units, and practice experiences into the teacher training curriculum, which will assure teacher training competency in audiovisual education. Many teacher education institu-

In large classes, AV teacher must often rely on supplementary materials.

tions will require this work and college instructors will make use of these materials as an integral part of their classes.<sup>15</sup>

McClusky states that twenty-five years ago the number of audiovisual specialists with doctor's degrees could be counted on one hand. *Phi Delta Kappan*, February, 1952, reported no less than fifty doctoral theses in progress in the audiovisual field. The number of higher educational institutions offering courses in audiovisual has increased from 21 to over 250 during the last twenty-five years.<sup>16</sup> Moldstad, writing in the *Audio-Visual Communications Review*, indicates that there have been approximately 420 doctoral studies completed in audiovisual education between 1936-1956 and an additional 93 studies completed in 1956 through September of 1957.<sup>17</sup>

What is the future for audiovisual? The facts show that audiovisual education is an integral part of teacher training. The utilization of audiovisual instruction has spread steadily during the past quarter of a century and will continue until the concept permeates education at all levels.

The growing interest in developing more effective media of communication will give impetus to the movement. Another motivating force will stem from the stigma surrounding verbalism. People are becoming more and more distrustful of fancy phrases. They want plain talk and understandable presentations. The establishment of serious graduate study in audiovisual techniques at the university level is a recognition of the need for professionally trained personnel to help in the task of making learning and communication effective. If the schools of today are to keep pace in practice with the techniques of communication in use in

the larger community which they serve, studies in audiovisual education are a must for tomorrow.<sup>18</sup>

# AV Coordination in a Large Urban School

by *Edward J. Kosell*

**M**ANY teachers feel there is too much difficulty involved in securing and setting up audiovisual equipment for a fifteen minute educational broadcast or a short instructional film; in consequence, many children are deprived of the proven benefits of these effective teaching materials.

On assuming the post of audiovisual coordinator of a sixty classroom Chicago public elementary school, the writer decided to make it just a little easier for teachers to obtain and use the school's equipment.

No problem was presented in the use of film-strip equipment. Several years ago it was decided to have the school library be the distribution center and custodian for filmstrips and film-strip projectors. Each teacher is given a listing of the several hundred filmstrips comprising the school collection; the teacher simply makes arrangements with the librarians for the use and return of this equipment. Incidentally, it was found that a large standard 3 x 5 card file cabinet can very easily be adapted for the storage of many hundreds of filmstrips. The locking facilities of this type of cabinet and its large size suit it ideally for safe and convenient storage.

On the other hand an analysis of the extent of participation in the reception of radio broadcasts presented by the school system's educational broadcasting station disclosed only a faint, sporadic use of this facility. On inquiry, teachers very frankly stated that too much effort was involved in making weekly arrangements for educational broadcasts. Citing the same reason, even more resistance was found to the use of instructional films.

By showing the teachers that the educational radio schedule was set up so that particular series were programmed on a full year's basis, the writer was able to obtain 100 percent teacher participation in the use of radio equipment for the semester.

Semester schedules were drawn up. A copy of the schedules was given each teacher. Also, each of the school's four radios had attached to it a routing sheet derived from the schedule. In consequence, every teacher in the building can very easily determine the location of any radio at any time during the day.

It was found that scheduling of this type resulted in a number of advantages. Radios leave the office at the start of the day and are routed from room to room by the teachers using the attached routing schedules. Intermediate trips to the office involving equipment handling and the resulting greater chance for damage are eliminated. Also, office personnel are saved the trouble involved in the routing of equipment. The last teacher using the radio is responsible for its return to the office for overnight safe-keeping.

Since the radios come to the room on schedule and almost automatically, it is quite easy for the teachers to make good use of them.

The cooperation of the school engineer was enlisted in adapting several heavy radios to "two-man" portability. This was done by attaching a window sash handle to each end of the radio. As a result, even the larger second grade boys can move the radio from one room to another.

Classroom use of sound motion picture equipment for short and purely instructional films also has its drawbacks. Perhaps understandably, so teachers are quite reluctant to make the necessary arrangements and go to the trouble of setting up projection equipment for the usual twelve to fifteen minute film.

It is here that the coordinator can be of invaluable assistance; here that a little effort on his part reaps great benefits for teachers and children. All that is required is some thoughtful scheduling and the providing of that vital spark of enthusiasm.

Films are received weekly from the schools' Division of Visual Education as a result of an order compiled from teachers' requests.

To expedite the formation of the schedule and as a convenience to the teachers, pupil messengers go to the teachers whose requested films were received. These teachers then indicate on an accompanying blank schedule the time and day on which they want their films shown, subject only to the restriction that they select a day on which the projector is on their floor.

Next, the messengers visit all the other teach-

## MOVIE FILM SCHEDULE NOV. 17-21

	MON. NOV. 17			TUES. NOV. 18			WED. NOV. 19			THURS. NOV. 20			FRI. NOV. 21		
	RM	FILM		RM	FILM		RM	FILM		RM	FILM		RM	FILM	
9:00- 9:30	I 2F	208	X-F-43	I 2F	210	X-S-5	I 1F	105	X-F-43	I 1F	117	X-J-4	I 2F		
	II 3F	310	X-A-9	II 3F	320	X-F-43	II GF	010	X-J-4	II GF	012	X-A-9	II 3F	313	X-A-9
9:30-10:00	I 2F	214	X-B-7	I 2F	211	X-U-19	I 1F			I 1F	120	X-M-12	I 2F	219	X-U-19
	II 3F	306	X-A-9	II 3F	316	X-F-43	II GF	08	X-F-43	II GF	016	X-J-4	II 3F	307	X-F-43
10:00-10:30	I 2F	218	X-U-19	I 2F	205	X-A-9	I 1F	106	X-F-43	I 1F	118	X-F-43	I 2F		
	II 3F	315	X-A-9	II 3F	304	X-F-43	II GF	06	X-A-9	II GF	08	X-A-9	II 3F	308	X-M-12

This schedule shows how teacher selections are worked out. Films are designated by catalog number, as "X-F-43" - "X-A-9" - etc. The Roman numbers "I" and "II" refer to the two projectors being used. "GF" - "1F" - "2F" and "3F" refer to the various floors of the building. Teachers may select any convenient period for showing a film on the day that the projector is "tagged" for their floor.

ers, many of whom had requested films that were unavailable that week. These teachers are given the opportunity to book any film that was received, provided the film definitely applies to their program of studies.

By making full use of the school's two projectors, it is possible to provide each teacher with his choice of a period from approximately ninety half-hour film periods each week. Thus, it is evident that a more successful instructional film program can function with only a minimum of equipment.

Employing the technique of attaching its individual routing schedule to each projector and to each film container, the equipment is in a position to move from room to room throughout the day without further attention from the audiovisual coordinator or office personnel. Providing each teacher with a duplicated copy of the master film schedule, enables the teacher to determine where the projectors and films are at all times during the day and the week. This is an invaluable aid in tracing equipment on those infrequent occasions when something unforeseen develops to upset the schedule.

For a school of more than one floor, it is advisable to set up the schedule so that the projector remains on one certain floor for at least half the day. In this way, equipment is rolled quickly and smoothly on a projection cart from one room to another on a floor and constant carrying of the projector from one floor to another is greatly lessened.

The method of setting up projector routing and film routing schedules from the preceding "master" schedule can easily be deduced.

The advantages of a permanently mounted projection screen in each classroom over those of a pupil-managed portable type need no discussion.

It is of course highly desirable that each teacher become proficient in the operation of audiovisual equipment. The writer has found a good time to train teachers in the operation of equipment is the period in the morning before the pupils enter the classroom or during a lunch hour. No more than two teachers can be trained properly at a given time.

Incidentally, the writer has found that from the standpoint of getting the program off to a good start each day it is advantageous to organize a small group of boys whose task is the delivering of radios, motion picture projectors, and films to the first-listed teachers on each day's schedule. As previously explained all movement of equipment thereafter is under the management of the teachers. As with the radios the last teacher using the films and projectors each day is responsible for its return to the office for safe-keeping.

The delivery boys are only too glad to help and are proud of their contribution to the smooth running of a successful audiovisual program. Too, since this job of delivery can be performed before classes start, no loss of instructional time need be suffered by the boys.

Naturally a certain initial effort had to be put forth to put this plan in operation. However, after a few weeks the rough spots were ironed out and a very satisfactory program has resulted. Although a very large number of teachers and 2600 children benefit from this service, a minimum of attention is required from the coordinator. Indeed, it is to a very large extent a self-sustaining operation.

The foregoing is an account of an audiovisual program that has worked out very well in a given situation. Some aspects of this program doubtless can be used with profit in many other situations.

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

## Beginning Responsibility: Books and Their Care

(Coronet Instructional Films, Coronet Building, Chicago 1, Illinois) 11 minutes, 16mm, sound, color or black and white, 1959. \$110 or \$60. Teacher's guide available.

### Description

A number of guiding principles for taking proper care of books and using them correctly are presented for the young neophyte reader.

It is Bobby's birthday and his grandmother offers to buy him any book he chooses in the large bookshop. Bobby is amazed at seeing the many books but finally selects *The World of Pooh* by A. A. Milne because his teacher reads stories from this very same book all of the time. He can hardly wait to get home. Grandmother has bought a picture book for Sue, his little sister, and, as they gather in the living room, the excitement runs high as mother, father, Sue, and Frisky the dog wait to see what they brought from town.

When father sees the title he remembers a book that he has had for over thirty years and he gets it from the bookshelf. It is *Winnie-the-Pooh* and is still in excellent condition. He shows Bobby how he took care of the book to have had it so long. First, he illustrates how to open a book so as not to break the stiff back or binding. As Bobby imitates his father's actions, little Sue also learns how to open her book correctly.

Bobby wants to read his book but it is suppertime and he must find a place to put it so Sue won't tear it accidentally or Frisky won't pull it off onto the floor. He can hardly wait to finish eating his dessert. When he does finish, however, he knows that he must wash his hands and pick up all stray crayons and pencils so that his book won't get smudged or have crayon and pencil marks on it. Sue washes her hands, too, and helps to pick up all of the crayons. They are very careful when turning pages and, at bedtime, Bobby uses a piece of clean paper as a marker. This doesn't hurt the book. He, also, must find a good place to keep his book. The bookshelf is just the place — just high enough so Sue can't get it and the book can stand upright and not fall to the floor.

The next day, Bobby takes his prized book to school to share with his classmates. Miss Johnson is very

interested and offers to show it to the entire class, however first, she shows them another book which was left out in the rain, had torn pages, and crayon marks all over the pictures. The narration asks, "Did somebody's little brother or sister do all this to what was once a new and clean book? No. Someone who was in this room last year did it. The way some boys and girls treat books, you'd think they were little children."

While getting a book from the shelf in the reading corner, Judy accidentally knocks a book to the floor and a page is torn. She immediately takes it to Miss Johnson who understands that accidents do happen and is pleased that Judy brought it to her at once so that she could repair it before the tear gets worse.

Bobby is happy that he knows how to take care of books, because they are such good friends.

### Appraisal

*Beginning Responsibility: Books and Their Care* fulfills a much needed role in the guidance of primary school children. In addition, by example, it illustrates that younger children in a household are influenced by what the others in the family do. The narration and visuals are kept at a level which makes it easy for primary children and younger to understand the basic procedures for caring for books and other niceties such as saying "thank you" and reporting accidents promptly. The film does not attempt to funnel information, but successfully demonstrates by example the several rules for book care.

— O. E. Bismeyer, Jr.

## The Face of Red China

(McGraw-Hill Text-Films, 330 West 42nd Street, New York 36, New York) 54 minutes, 16 mm, sound, black and white, 1959. \$225.

### Description

This portentous film produced for CBS-TV shows how enthusiasm and idealism, as well as regimentation, are weapons in the hands of the Red leaders who exhort and coerce China's millions with Mao Tse-tung's promise of Utopia: "Three years of hard labor for one thousand years of happiness"; and, what Red China has accomplished and hopes to accomplish by her "Great Leap Forward."

However, since American journalists and news cameramen are forbidden to travel in Red China, this discerning film was shot by Rolf Wilhausen, a West German news photographer, and the text was narrated on the scene by the Canadian Gerald Clark, of the *Montreal Star*. In addition there is further text and discussion by Clark and Walter Cronkite, who cogently discuss the implications to the West of this thoroughly aroused dragon of Red China.

Reel one devotes itself to the rural communes first set up in April of 1958. In this galvanic uprooting of the traditional Chinese family, four-fifths of China's 500 million peasants or 120 million peasant families are packed into some 26,000 communes. This mass military impressment of peasant families into barracks life and exhausting labor on collectivized land apparently far outdoes the totalitarian zeal of the Soviet Union in intensity. Here, with bewildering and fanatical zeal, dams are completed in 80 days — the tools for the most part, the bare hands and straining muscles of hundreds of thousands who under mesmeric regimentation heed the slogan, "Do not wait for the machines, develop small industries."

For example, in a commune significantly named "Sputnik" women laborers scour the countryside for iron ore and scrap metal which they process into pig iron in crude homemade blast furnaces. Furthermore, no one escapes this gigantic and all pervasive socio-political movement. All students, office workers, and nurses are required to contribute work in the communes after hours and on vacations. Moreover the traditional role of women with the three cares no longer exists. She now sends her children to state communal nurseries leaving herself free for mechanic duty in tractor service stations tending the backyard blast furnaces building, farming, etc. In short, her primary duty is now to the "people" and not to the family which has long been the crux of Chinese life.

Work in the fields for both men and women begins at dawn and lasts until sundown. The children volunteer for work once a week while the university students volunteer during vacation. The latter is one way the regime combats the tendency of intellectual to look down on manual labor. And manual labor it is, for most of the work is accomplished by primitive

hand and back methods—the only respite being an hour of military drilling following a half-hour lunch break.

Significantly, the entire movement is shot through with unceasing and ubiquitous propaganda for the state and the system. Children parade through village streets chanting "Socialism is best" and "Taiwan must be liberated." Indeed, public demonstrations as a means of propagandizing the populace in village or city are held on the slightest provocation. Many of them are anti-Western rallies protesting United States and the West policies. Today, however, more refined and persuasive methods are employed; "We do not chop off heads now. We reshape them." Thus, "painstaking reasoning" according to Mao is utilized in this constant indoctrination, which downgrades intellectuals and professors.

Reel two limns the impact of the new China on that of the old. Here, Peiping, the Imperial and Forbidden City of the decadent Manchu emperors, has become the capital of Red China. Here, the summer palace of the Manchus is now "The People's Park and Cultural Center." Here, T'ien An Men Square is Peiping's equivalent of Red Square in Moscow. Here, also,

the Chinese avow they will build a new capital by the tenth anniversary of the People's Republic.

Instead of downgrading all of China's past, a concerted and vigorous effort is now being made to inculcate national pride in China's old and rich culture. After all, gunpowder, paper, and movable type were contributions of the old China and should be rightly acknowledged. Apropos of China's lag with the West they say, "We may be behind you now but it wasn't always so"—the implication being we will soon catch up and surpass you.

Shanghai is again open to trade. However, now one finds along the famous waterfront Bund only 5,000 foreigners as compared to the over 30,000 of pre-revolutionary days. There are still widespread slums but less litter and odor due to the constant emphasis on sanitation and the call to clean up such perennial scourges as rats and flies. Older people are given jobs of checking on the cleanliness of streets and houses.

A most important educational reform of Red China is the abolition of the intricately complex and symbolic alphabet and the substitution of a romanized one. Thus, all the oncom-

ing generations will be trained in this new and simplified language system, all of which will undoubtedly raise China's literacy rate.

Apropos of the industrial change and economic offensive, the "Great Leap Forward" has been due to the limitless human energy of China's millions. The statement of Marx, "Twenty years are concentrated within one day," is not an exaggeration, for here one finds literally thousands of backyard blast furnaces which represent the new industrial China. Here, too, a cyclotron where ten years ago nothing existed. Why are whole armies of people content to be moved from place to place in this prodigious and unrelenting drive to industrialize? Perhaps it is a sense of patriotism and achievement.

Perhaps the epitome of Red China's industrialization is found in the great Anshan steel mill in Manchuria which turns out high grade steel, so vital a factor in the export offensive of cheap goods for southeast Asia. China seems to say, "Anything the West can do, we can do better." Here the nationalism, chauvinism, and xenophobia of the new China reside.

Russia's reaction to all of this? She who helped to industrialize Manchuria

## THE STORY OF COMMUNICATIONS

A NEW CONCEPT  
OF EDUCATIONAL FILM PRODUCTION

From man's discovery of fire signals to his conquest of space... a thought provoking art film students will ask to see again. FULLY ANIMATED in MODERN ART FORM; NARRATED in poetic style; SCORED with original music. A springboard that will motivate expression.

now looks on with awe and apprehension and no longer sends as many technicians as formerly.

The final sequence of the film deals with two long-standing issues, namely: the Formosa question and Red China's admission to the United Nations. In answer to both of these, China states that "Time is on our side," and that ultimately the United States will withdraw from Formosa and Red China will enter into the United Nations. Moreover, there will come a day after the death of Chiang Kai-shek when Red and Nationalist China will be reunited. Thus for the present the communist revolution in China seems to be giving China the food and security she currently needs.

#### Appraisal

This film, which admittedly does not include all facets of the emergence of the new and industrialized China, does make a valuable contribution toward our understanding and, most important, our not underestimating the Chinese dilemma. Indeed, by its perceptive filming and cogent text it presents, perhaps, the best up-to-date overview of what Red China is about. Moreover, with an ideology that promises standards of living and a fair

share of the "good things of life," the Chinese Communists have developed, and may be able to maintain, considerable support for their form of government for at least a generation or more. All of which is to say that this presents serious problems for our country and the West.

— Robert B. Pettijohn

### (How Nature Protects Animals—second edition)

(Encyclopaedia Britannica Flms, 1150 Wilmette Avenue, Wilmette, Illinois) 11 minutes, 16mm, sound, black and white, 1959. \$60. Teacher's guide available.

#### Description

The film opens by showing that animals are struggling constantly to survive in the midst of such hazards as fire, flood, heat, cold, disease, changes in the climate, and other animals that prey upon them. Some species do not survive, such as dinosaurs and passenger pigeons, while others withstand the climate, escape their enemies, and survive over long periods of history.

Several examples illustrate how nature helps animals survive by protecting them in various ways. The distasteful moth is spit out by its frog captor; the keen senses of the deer help it to escape its enemies; the fertility of insects helps some of them to survive and continue the species; the buffalo, osprey, scorpion, and other animals protect and care for their young until they can put up a good fight for survival on their own.

The defensive adaptations of animals are shown as belonging to three classifications—hiding, fleeing, and discouraging attack. The first type is exemplified by a frog hiding under a log; a crab burying itself in the ocean sand; prairie dogs fleeing to their underground homes, while the protective coloration of butterflies, toads, praying mantis, rattlesnakes, and other animals hide them from their enemies.

The second type of defensive adaptation of animals—fleeing—is illustrated by showing various types of locomotion used by animals: the antelope flees by running, the kangaroo hops, the seal swims, the snake crawls, the opossum climbs, the egret flies. The film also shows an owl and woodpeckers sheltering themselves in holes in trees.

The film continues by picturing a porcupine discouraging attack by using its sharp quills and shows that a bee achieves the same result with its stinger. The Viceroy butterfly mimics the Monarch and escapes being eaten

by birds; the remora fish attaches itself to the bottom of a shark thus obtaining protection and portions of the shark's food. It shows a skunk discouraging the attack of a fox by use of its effective defense weapon, then pictures the well camouflaged sphinx moth larva which displays a special eye-like marking when disturbed. Next, it shows an armadillo with its protective, tough, horny plates and the harmless hognose snake acting as if it could inflict great harm. The protection of the diamond-back rattlesnake is obvious as the film pictures it striking.

As the film concludes with a review montage, the narrator tells that through the defensive adaptations just shown and many others nature has kept alive an endless variety of animal species through countless ages of the history of the earth.

#### Appraisal

This interesting film clearly presents a variety of examples which illustrate important biological principles concerned with animal adaptation for survival. The visuals should command the attention of a wide audience range from primary grades through adults but the film will probably have its greatest use on the intermediate and Junior high levels in general science and biology. It will also be useful to the teacher of senior high biology when uncovering units concerned with animal survival. Although not directly concerned with extinct species, the film should stimulate some thinking concerning these and the species that are nearly extinct, such as, the ivory billed woodpecker and the whooping crane. It will also be useful in discussions concerned with existing primitive forms of life, such as, the lungfish and sowbug, but its greatest use will be to show some of the adaptations which make it possible for animals to survive their many natural hazards. Since a wide variety of specific examples is shown, some teachers may wish to use the film to help develop in their students the ability to reason inductively.

— George Vuke

### Rhythmic Motions in Growing Plants

(William M. Harlow, 115 Terrace Road, Syracuse 10, New York) 11 minutes, 16mm, sound, color, 1959. \$90.

#### Description

This entire film uses time-lapse cinematography to show the circular motion of plants as they grow, the effect of gravity on their direction of growth, their reaction to light, diurnal

## AN IMPORTANT FILM EVENT...

### THE HUMAN BODY: Reproductive System

This film provides an excellent explanation of the function of the human reproductive system. Tastefully presented in a combination of animation, photo-micrography and live action, the film includes a unique scene of a human sperm fertilizing a female ovum. The various parts of both the male and female reproductive system are carefully described and illustrated, including structure and function of the major organs, the complete pro-

cess of fertilization, and the beginning of embryonic development. Entirely technical in nature, the film is designed for high school biology classes and represents the fifth film in Coronet's *Human Body* series. The film is 1¼ reels (13½ min.) in length and available in a choice of either color or black-and-white. It is recommended that the film be shown to boys and girls separately.

#### Other new films from Coronet in color or black-and-white:

**Beginning Responsibility: Books and Their Care** (11 min.) Primary, Guidance

**Boats: Buoyancy, Stability, Propulsion** (13½ min.) Junior High, Science

**Communication in the Modern World** (11 min.) Intermediate, Social Studies

**Greece: The Land and the People** (11 min.) Intermediate, Social Studies

**Spanish Colonial Family of the Southwest** (13½ min.) Intermediate, U. S. History

**To Preview . . . any of these films at no charge other than return postage, merely indicate your selections in the coupon. We shall also be pleased to furnish a copy of our most recent catalogue on request. Merely use the coupon.**

changes, and the motion of climbing plants as they seek support. The amount that the action is speeded up varies from 1,000 to 5,000 times.

*Rhythmic Motions in Growing Plants* opens by showing the sprouting of barley seeds and the waving of the growing plant from side to side, which motion, the narrator explains, is called circumnutation or nodding in a circle. Animated diagrams of the movements of a growing nasturtium show that these circular movements form a spiral that increases in diameter as the plant grows upward. The film continues by picturing the movement of growing ash tree leaves and uses the hepatica to show that both flowers and leaves circumnutate. The undulating motion of roots is shown as they grow from a willow twig.

The next sequence shows the reaction of plants to light. It pictures the closing of clover leaflets at sunset and their spreading again in the morning. The leaves of the lupine react in a similar way.

The film shows the effect of gravity on a potted bean plant that is placed in a horizontal position. The plant curves until the tip of the stem is growing in a direction opposite from

the earth's gravitational pull. The effect of gravity on the roots is opposite to that on the growing stem. The plant is placed at various angles and each time the roots bend and grow in the direction of the pull of gravity.

Movements of climbing plants are next shown. The morning glory has a clock-wise, circular motion as it searches for a vertical support. It is shown circumnating around a suspended string, exerting enough force to move the string and finally wrapping its tip around the string and using it for support.

The scenes that follow show the tendrils of the wild cucumber as they lash out like whips in all directions; the plant itself moves very little. The tendril finds a support, twists, acting like a turntable, and draws the plant over to the support.

The film concludes by suggesting to the viewer similar observations, explorations, and experiments which he can perform in this interesting field of plant growth.

#### Appraisal

This fascinating film can be used in a variety of ways with audiences that range from elementary grades through college. Also, it will open new ave-

nues of exploration for the week-end botanist. The use of time-lapse photography results in a dynamic presentation that is possible only through the film medium. This film will assist in stimulating the viewer to further study and experimentation concerning plant behavior including their tropistic reactions to water, light, gravity, contact, and chemicals. It may also be used to show that plants, as well as animals, move and respond to stimuli, two of the characteristics of all living things. The visuals clearly show the various motions of plants; consequently, some teachers may choose to use the film without narration to assist in developing skills in concept formation. After studying the visuals, the viewers could form hypotheses concerning the behavior of plants, to be further tested by the conducting of controlled experiments. More advanced groups may wish to study the plant motions more critically at slower projection speeds.

In one of the reviews in this column we call attention to the fact that the producer includes a final frame calling attention to the fact that the teacher might reshoot the strip after an interval of three to five days. This is a very good thing to emphasize—if by "reshoot" we understand that "reshoot—use" is included. It would almost seem that the time had arrived when it was unnecessary to repeat this, but apparently we have not reached the millennium yet. You do not always get immediate returns from one projection—use of a filmstrip; indeed the whole value of filmstrips to me, lies in the fact that you can so easily go over and over the material to meet the needs of pupils of all types. Of course there are many times such repetition is unnecessary, and would only result in a wave of boredom and sluggishness in pupil interest. But the heart and soul of filmstrip utilization technique is this matter of potential re-use and controllable-speed use. So often it has been said that repetition of a phrase or sentence is a means of achieving emphasis. Well if it is true in one instance, it is just as true in another. Please, do not look upon filmstrips as "one-time projection" materials; do recognize them for what they are—continued and continuing use materials that can be called upon time and time again.

### Artists of Holland

(2 strips, color; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.; \$12 per set, \$6 each.) Vincent Van Gogh and Rembrandt Harmenz. van Rijn are the artists in question, and our visual visit with each provides us with examples of their best known paintings. As such, of course, the filmstrips are valuable because they enable teacher and pupils to see these masterpieces under classroom study conditions, and allow time for leisurely examination and study of details. Perhaps our own years of museum work make us partial to such materials. If you have ever watched groups of students visiting museum exhibits, you know that frequently so much is seen on these visits that the full impact or value of the collections is not fully realized. Filmstrips such as the ones here reviewed provide a basis for follow-up of museum trips, and, in this case bring into the classroom many items which are not included in our own museums.

These are the equivalent of a tour of many museums in many parts of the world and the student of art will find much that is interesting in the detail and examples of the work of both artists.

### Adventures in Communicating

(4 strips, color; produced by Filmstrip House, 347 Madison Ave., New York 17, N.Y.; \$20 per set.) So many phases of modern life are dependent upon proper and adequate communication between people that it is extremely important to understand the basic rules of sentence structure. The four strips of this series go into a rather thorough explanation of what constitutes a sentence, how to lend variety to your sentences and how to observe the amenities of grammatical do's and don'ts. At the end of each strip the producer suggests that the teacher reshoot the strip after an interval of three to five days. Certainly this is a must with material of this type, for it is produced to serve as help in an evolving process. Correct use of language forms is a skill gained over a series of lessons and these strips should be used not once, but many times.

### Canada and Pacific Coast

(9 strips, color; produced by Curriculum Materials Corporation, 1219 Vine St., Philadelphia 7, Pa.; \$3.95 each lesson, rental \$1 each.) Like our own country, Canada includes a vast area, with many regional resources and scenic spots. Emphasis in this set is on such items as aluminum, oil, furs, forests, grain farming and fishing in the western provinces and Pacific coast area. We are also shown some of the famous vacation spots that drew visitors to Canada. The material is adapted to units in regional geography and for general social studies. Although Canada and the United States share many things in common, still there are special features of Canadian life and economic development which make it essential to understand the people of this northern neighbor, and this series will help to achieve this.

### Cendrillon

(single strip and record, color; produced by National Film Board of Canada and available from Stanley Bow-

mar Co., 12 Cleveland St., Valhalla, N.Y.; \$11.00 with record.) The story of Cinderella is a long time favorite, but it comes to us this time with captions in French and a recording in French dialogue. The art work of the filmstrip is delicate and appealing and provides a truly fairylike quality. The dialogue naturally provides an opportunity for gaining facility in the use of a foreign (or should we say "new" language). If language study is to have meaning and value, then we personally think material of this type is to be highly recommended. There is more to language than grammatical structure and parts of speech. We need to hear a language spoken; to hear it in the context of a story or conversation; we need to hear the shadings and nuances of its tonal qualities and rhythm. Certainly this is an excellent filmstrip for such purposes; it provides both the literary story and the record for language study, and can be recommended both for literature classes and for French study classes.

## How We Get Our Clothing

(4 strips, color; produced by Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.: \$16.25 per set, \$5 single strips.) Without cotton, wool, leather and rubber we would have a serious problem in providing clothing to protect us and to service all our needs. In this instance we see exactly how the basic materials are secured, what animals or forms of plant life supply the base stock, and how the material is processed, from a bolt of cloth or a piece of rubber to the yard goods and boots which we select. Emphasis is placed on the important part played by machines in processing these products. The strips are said by the producers to be for social studies in grades 3 and 4. We think there is considerable information that will be both interesting and profitable for use in higher grades in home economics units dealing with clothing and for consumer education.

## Trucks Work For Us

(single strip, black and white; produced by and available without cost from Automobile Manufacturers Assoc., 320 New Center Building, Detroit 2, Michigan.) If you stop to think about it, it is hard to imagine what life today would be without trucks. Trucks bring us food, clothing, manufactured goods, building materials with which to construct our homes. In fact, as our picture story tells us, "practically everything we eat, wear or use is carried at least part of its journey (from source

to consumer) by trucks." There is considerable helpful information in this strip for use with any unit dealing with transportation.

## True Book Filmstrips of Natural Science and Physical Science

(two series of six filmstrips each, color; produced by Children's Press, Inc., Jackson Blvd. and Racine Ave., Chicago 7, Ill.; \$28.50 per set of 6 strips; \$4.75 single strips; \$9 per set for unit of 6 correlated books.) This is a project designed to correlate textual or book material with filmstrips. The material is planned with second grade reading level vocabulary in mind and is for the primary and early grade science work. The natural science series includes stories about animal babies, birds, insects, plants and trees. The physical science series includes "Air Around Us," "Deserts," "Moon, Sun and Stars," "Oceans," "Rocks and Minerals," "Seasons." The filmstrips can be used independently of the books, but the units are well coordinated. The facts included are simple and there are suggestions for simple projects and experiments.

## Opera and Ballet Stories

(6 strips, color; produced by Jam Handy Organization, 2821 E. Grand Blvd., Detroit, Michigan; \$28.50 for set of 6 strips, \$4.95 single strips; \$21 for set of 6 records, \$3.95 for single records.) One has only to examine the reviews in current newspaper columns to realize the extent to which opera and ballet have increased in popular appeal for all age groups. As art forms, both mean more to us when we understand both story and music. This series gives us *Lohengrin*, *The Magic Flute*, *Aida*, *The Barber of Seville*, *The Mastersingers*, and *Coppelia*. The accompanying records provide narration and thematic music on one side, and complete musical score on the other side. Of course, the filmstrips can be used with any desired recording, but the set as constituted has much to offer. Without wishing to minimize in any way the value of this material for school and educational groups, we have always wondered why more people didn't have projectors and record players at home. Personally we think there is enjoyment as well as education in this filmstrip-record series; the visual adds to the musical enjoyment.

# CECO'S NEW WEINBERG WATSON PROJECTOR

CAMERA EQUIPMENT CO., INC.

Coaches . . . Doctors . . . Teachers . . . All have helped us modify the 16mm Kodak Analyst II to encompass all the features required in a true time and motion study projector. The Weinberg Watson is ideal for checking a variety of recorded data such as sports, motion study, laboratory reactions, and many other subjects where time expansion study is vital to the solution of a particular problem.

### CHECK THESE EXCLUSIVE FEATURES

- Continuous variable speed from 2 to 20 frames per second. Electronic single frame advance.
- Flickerless projection made possible by a revolutionary shutter design.
- No light loss on single frame projection (and film will not buckle).
- Remote control switch combines two operations . . . press one button for single frame operation . . . the other for instantaneous forward-reverse motion.

# AUDIO

by Max U. Bildersee

As you read these words, do you hear them, too?

Children reach school age definitely audio-oriented to information transmission. Audio is their means of communication and their understanding of sound is vital to their success in school — from the date of arrival.

Through the first few years of schooling we as teachers take full advantage of the audio training given to the child at home — and through the skills acquired from the first day of life we build new skills — the skills of seeing . . . of interpreting . . . of understanding . . . and even of reading.

The child reads sound. The child hears the words read to himself and understands. One of the first skills taught in school is that of hearing — hearing through the eyes!

With the progress of the years in school audio skills need (it seems to some) no further training and are overlooked. The eye has become all important. By the time the child has reached the fourth grade much information is transmitted through the eye and reading skills are stressed. But the child, in his reading and in his writing, continues to "hear" the sounds he sees or creates on paper, and his audio training continues.

The eye continues in dominance through the elementary school as it is presently constituted — and in the junior high school ear training becomes important again until, by the time the twelve year educational experience is completed, both eye and ear have

been trained as receptor senses — and have been given "equal time" and "equal billing."

The only remaining fallacy to be conquered, then, is the constantly enlarging area for audio communications in adult life. And, as many "hear" this through their eyes by translating the words and syllables from sight to sound for comprehension they are proving only that through the school years the eye and the ear must be trained to work together to help the individual achieve understanding — or education fails.

Major modern communications media, when they are effectively employed, rely on both aural and visual comprehension. The sound motion picture (when was the last time you saw a silent film?), the television programming and indeed our daily surroundings are not audio — not visual — they are audiovisual.

As hearing through the eye has become common — so has reading through the ear. That sound we heard is interpreted into a visual image — the coin falling, the key in the lock, the auto passing down the street, the airplane passing through the sound barrier. We hear the sounds — we see the sight.

And we listen to recordings. To music we add the atmosphere of the concert hall — or the campfire, whichever is appropriate. To speech we add the complement of the political rally with all its visual confusion, we add the solemnity of the formal reading

before an audience, we add the thrill of the theatre. Thus do we see through our ears.

But only through the eyes and ears in concert do we as teachers instruct — do our students learn. And our responsibility as teachers is to encourage audiovisual comprehension — not audio, not visual — but total audiovisual understanding.

Harcourt, Brace is expanding its publication services to include the publication of essentially audio materials. This is progress toward the ideal of distribution of the word of men not only in cold print, but also in their own inflections. Particularly we refer to an exceptional, unusual, and highly worthwhile record, "THE SCIENTISTS SPEAK: BIOLOGY," recently announced.

George Gaylord Simpson, Professor at Columbia University, discusses "What Biology Is and What It Means to Me." The Research Professor of the Photosynthesis Project in the Department of Botany at the University of Illinois, Dr. Eugene Rabinowitch, discusses "Photosynthesis and You." When he says to his audience, as he opens this discussion, "Fundamentally, you and I, and all other men, as well as all animals, are parasites," we are immediately struck with man's role in the total environment which he has adapted to his needs. Dr. Rabinowitch's informative discussion of photosynthesis can be profitably heard by all biology students from the junior high school through college. And he issues the challenge to all his listeners when he concludes by saying, "As yet, we do not know how to convert light into chemical energy, or how to build up organic matter from inorganic raw materials, something plants do all around us all day long. What a shameful ignorance, and what a challenge!!"

Dr. René J. Dubos, who is now engaged in one of the most forward-looking phases of medical research, is perhaps best known for his research leading to the isolation of several antibiotics. His contribution to the recording, appropriately, deals with "The Infinitely Small: Microorganisms in Human Life and in Science." Dr. Dubos discusses his own experiences in research, credits Louis Pasteur with reporting to and startling the scientific world with a biological explanation for old chemical processes such as the fermentation of grape juice, the souring of milk and the production of vinegar. And Dr. Dubos repeats reasserts what Pasteur was fond of saying, that "the role of the infinitely small is infinitely great."

**— A WORLD OF SOUND ON FILE —**

The 1946 winner of the Nobel Prize in Medicine, Dr. Herman J. Muller, discusses "Genes—the Core of Our Being." Dr. Muller refers to knowledge—particularly the knowledge of our inner being and its manner of reproduction—as "powerful," saying that it "can be used for great good—or great harm."

Julian Huxley begins his discussion of "Living Things" by saying, "Even as a small boy I was fascinated by the strangeness and variety of living things—animals and plants. And ever since I began studying biology, I have wanted to find out more about why living things are as they are—why they are so varied and so strange." Dr. Huxley discusses evolution and refers to Man as the latest dominant type because "of his bigger brain, his intelligence and his imagination. These new mental powers made it possible for him to do what no animal is capable of—to discover more and more knowledge about the world and about himself, and to accumulate knowledge and ideas by handing on the results of experience from one generation to the next."

"Thus," says Dr. Huxley, "man can plan ahead in a purposeful way." He adds that, "Barring accidents, we men have many millions of years ahead of us."

This entire exceptional recording is worthy of the attention of science staffs for introduction piecemeal or totally in class—or for assigned listening.

New literature in the field of audiovisual education is always eagerly awaited and the second edition of James S. Kinder's **AUDIOVISUAL MATERIALS AND TECHNIQUES\*** is no exception. The second edition is considerably expanded over the first—and brings valuable information to students and audiovisual practitioners alike.

Particularly, we found the variety of information in the chapter "Educational Recordings" to be broadly conceived, well researched and authoritatively presented. In this chapter Mr. Kinder traces first the history of the phonograph from Edison's historic "Mary Had A Little Lamb" to the present multi-speakered stereophonic machines. Dr. Kinder discusses the problems of the values to be attained by teaching with records and transcriptions. He discusses not only the types of recordings available, but also techniques of utilization and correlation of recorded material with other materials.

Dr. Kinder summarizes the problems of selecting equipment, caring for it and for records and lists sources of recorded materials. Dr. Kinder delves into the unique qualities of tape recordings, mentions some of the machines on the market, discusses editing and splicing and lists a variety of educational uses for magnetic recording devices.

The progress of the audio field is so rapid that the manuscript for this book, completed months ago, cannot adequately treat the developing area of stereophonic sound... indeed there is great need for research into the contributions of this new development in

education as well as into the ultimate contributions of language or listening laboratories to the total educational scene.

**\*AUDIOVISUAL MATERIALS AND TECHNIQUES, Second Edition, by James S. Kinder of the San Diego (California) State College is published by the American Book Company, 55 Fifth Avenue, New York. It is intended to meet the needs of students, teachers in service and directors of audiovisual programs. Each will find portions of the book extremely useful.**

**Audiotape "speaks for itself" in a spectacular recording**

**—available in a money-saving offer you can't afford to miss!**

**DETAILS OF THE PROGRAM**

The program includes these colorful selections:

- Tchaikowsky .. Russian Dance
- Sibelius ..... from Finlandia
- de Falla ..... Dance of Terror, Ritual Fire Dance (El Amor Brujo)
- Brahms ..... from Symphony No. 4 in E Minor
- Khatchaturian .. Saber Dance
- Stravinsky ..... Infernal Dance, Finale (Firebird Suite)
- Beethoven ..... Ode to Joy (Symphony No. 9 in D Minor)

**DETAILS OF THE OFFER**

This exciting recording is available in a special bonus package at all Audiotape dealers. The package contains a 1200-foot reel of standard Audiotape (on 1½-mil plastic base) and the valuable "Blood and Thunder Classics" program (professionally recorded on standard Audiotape). For the entire package, you pay only the price of two boxes of standard Audiotape, plus \$1.

**HERE'S** a reel of musical excitement that belongs on *every* tape recorder. "Blood and Thunder Classics" is a program of great passages of fine music, specially selected to show you how vibrant and colorful music can be when it is recorded on *Audiotape*.

"Blood and Thunder Classics" is available **RIGHT NOW** from Audiotape dealers everywhere. (And *only* from Audiotape dealers.) Ask to hear a portion of the program. Then, take your choice of a half-hour of rich *stereo* or a full hour of *monaural* sound—both at 7½ ips. Don't pass up this unusual opportunity.

# AV IN THE CHURCH FIELD

by William S. Hockman

## Editorial Notes

The other day, the same old bogey: "We used that film once in our church. Is there something new?" Yes, of course there are new films. However, any film good enough to be used once with one group is plenty good enough to be used with another group—unless every one in your church saw it the first time. That's not very likely!

The 'missionary' study themes for 1959-60 are: "Africa" and "The Church in Town and Country." Early in the fall churches will be asking for the films which relate to these themes, especially *None Goes His Way Alone* (the need of people to live and work and play together), and *The Harvest* (portraying the problems a rural pastor must face). Both are 30 minutes, and B&W, and (ought to be) available through your local AV dealer. *New Faces of Africa*, 30 minutes, will soon be released. Also investigate these titles: *Family of Ghana*, 29 min.; McGraw Hill; for general audiences. *Beyond Brick and Mortar*, 32 min.; color; returning missionary reflects on what he accomplished; UCMS, 222 S. Downey, Indianapolis 7. *Congo Journey*, 30 min., Methodist; overview of missions in Congo. *Challenge of Africa*, 30 min.; B&W, several years old, but good. (More titles in September issue).

At every meeting of local church and church school workers we attend it is obvious that no or little AV knowledge and understanding is reaching these people. Why? Denominations are failing, the local councils of churches are neglectful, the local church can't lay its hands on leaders with know-how, and AV material of fine quality, and costly, goes little used or not at all. Who needs to wake up first?

We can't give you our reasons here but we found the Moody Institute of Science (Los Angeles 25) filmstrip series, "Building A Better Sunday School," a sensible and helpful presentation, and priced right (\$24.00 for the four filmstrips and 2 LP records).

The two weeks of July 20-31 we will be teaching Ed.260y, Audio-Visual Communication in Religious Education (3 hrs.), in Syracuse University, and cordially invite even those slightly interested to confer with me or the University about this course. It would be a joy to have you in my class, Gentle Reader!

We like the theme, "Improving Christian Communication," for the 16th (can it be that many?) annual International Conference on Audio-Visuals In the Church, to be held at Green Lake, Wisconsin, September 6-11, 1959. The Second National Executive Consultation will run concurrently. For the top brass there will be Consultation Laboratories for the lesser brass, Conference Laboratories. In both instances, some tough questions are to be dealt with realistically. Detailed information from DAVBE, 257 Fourth Ave., N. Y. 10.

## Geriatrival

*The Proud Years* shows in considerable detail the practical steps that can be taken to help old and infirm people lead active and useful lives. Being active and useful, they will be satisfying. Now the intended audience for this film is primarily those who have responsibility in an institutional way for the aged and ill. But, such a film as this can lift the ceiling of understanding for any one in your church, club, or group—young or middle-aged. Churches can use this film to educate board members and families on how to understand and aid effectively older people within the family and community. The setting for this film is the Home for The Aged and Infirm Hebrews of New York. It has a running time of 28 minutes, and is available from the Center For Mass Communication, 1125 Amsterdam Ave., New York 25.

## Changing Alaska

In a 30-minute color documentary film, *Alaskan Discovery*, we see what is happening to the church in Alaska. A native Christian, English speaking, is being interviewed by a States-side

visitor and the camera takes us out to see what they are talking about; village way of life changing; migration to larger communities; unemployment; settled church-people uneasy in the presence of the newcomers; no one knowing just what move to make, or who should move first; vice and its victims; lack of leadership and know-how in the churches. The sequences are good; the impression lasting; a good film for use in family-night and missionary education programs. Thirty minutes; good photography; forceful commentary—a useful film of fine qualities. Produced by Cathedral Films, Inc., and widely available through local film rental libraries.

## One Book—Many Languages

We used to say, there ought to be a film showing the churches how the American Bible Society, acting as the agency of the churches, translates, prints, and distributes the Bible in all parts of the world. Now there IS such a film, *Bearer of The Book*. It's in color, with a running time of 27 minutes. In a lively manner it tells us how the problems of translation are solved so that the Bible today is available in 1100 languages and dialects. We see patient scholars skillfully working out an alphabet for the language of a remote people. Then, with the language in written form, the translation can begin—word by word, with great care to get just the right native word to convey the Biblical meaning. No easy task, when it is remembered how much of Biblical thinking is profound.

We are shown translation "field-work"; shown the publication and printing process in N. Y.; and then see distribution on near and distant fronts. An excellent, interesting, informative film just the thing for family-nights, for youth and adult clubs and fellowships, and for church school teachers. Warmly recommended. From the A-V Dept., American Bible Society, 450 Park Ave., New York 22, N. Y., and the service fee is \$4.00.

## Parable Films

By the recent release of *Tumbledweed Man* and *The House That Hun-*

ter Built, Family Films, Inc., brings its "Modern Parables" series to nine titles. These two have good technical qualities, a running time of 30 minutes, and a rental of \$9.00 for black and white.

The first film puts the parabolic saying concerning the tree and its fruit in a modern setting. Larry and his wife and baby, on the move from job to job, are befriended by a Christian couple who operate a filling station and motel. Their faith supports these young parents when trouble (quite imaginary, it turns out) strikes and helps them settle down and face life.

The second film shows us two families: one on the right side of the tracks, the other on the wrong—as Mr. Hunter, successful, self-assured, and very casual about moral and religious values, neatly orders the world. His daughter has been taught to go after what she wants. Coming from the other family is a fine son, brilliant student and the inheritor of very fine standards. But, he is not nearly good enough for Hunter's daughter. When tragedy hits both families, one crumbles and the other stands.

In both films there is a strong evangelistic flavor. Both have a message both for those inside and outside the church, and each would make a fine film-sermon for Sunday evening or mid-week services. I recommend both for youth fellowship meetings as well. They hold the mirror up to our times in such a way that religious faith makes a lot of sense.

### C.R.O.P.

*Ambassadors To The Hungry* is a 16mm B&W sound film documenting the origin and development of a unique American enterprise—CROP. These letters stand for the Christian Rural Overseas Program which seeks to relate our abundance to the stark need of the post-war world. This 26-minute film is available free, except for return postage, from CROP, 117 W. Lexington Ave., Elkhart, Indiana.

It gives us authentic scenes of the devastation caused by war, earthquake, flood and famine and beautiful scenes of America's bountiful harvests. It shows us the response which rural America has made to the needy of the world. Their hunger and general plight is realistically shown but not sensationalized. Food is seen as basic to world peace, human dignity and development, and to security for all mankind. And who can or will dispute this fact!

Here is a film for youth and adult groups in and out of church; in city, town, and country. It informs about

CROP in particular, but it can motivate the support of all kinds of sharing programs. It is a document of hope. In the working out of His plan for the world, God has placed abundance in our hands. We will be measured and tested by what we do with it.

### Over-View of Mid-East

*Middle East Problems*, a new release by Atlantis Productions, Inc. (7967 Sunset Blvd., Hollywood 46), in twenty some minutes gives us an over-view of some of the basic problems of the Middle East countries: minority groups within political units; the general backwardness of agriculture; the slow but sure industrialization, and the widespread need for better health and

educational standards.

The photography is good all the way, and the narration is informative—but not continuous, as in so many films. There are many "stretches" with background music only, and I liked them. It left some time for the mind to absorb and assimilate. Besides, the music is nicely keyed to the pictorial sequences.

This film is recommended for use with young people and adults to inform, to motivate further study; to orient them on some basic issues, and help them understand the essential nature of a key region of our contemporary world. As a background film on this year's ecumenical study theme, *The Middle East*, it should have wide and profitable use. Recommended.

## First from PHILCO®...

## New All-Transistor TV Camera for Schools at only \$1445

Here's the camera that makes educational TV practical—dependable and trouble free... at a saving of hundreds of dollars.

Alighrweight, maintenance-free, foolproof camera that anyone can operate. No matter how large the audience... now, everyone can participate in lectures, demonstrations, classroom sessions. Compare the quality of this newest Philco

TV camera with any other. To improve the quality of your audio-visual program... at dramatic savings... insist upon Philco TV.

The UNIVERSAL  
ARC SLIDE PROJECTOR

projects brilliant, full-of-detail pictures  
**UP TO 30' WIDE**

using 3¼" x 4" and 3" x 2" black and white and color slides even where it is impractical to darken the room or where it is desirable to maintain illumination for taking notes.

Incandescent projectors limit you to small screens and small audiences, Universal Arc Projectors are widely used for audiences of up to 6,107 in presenting management reports at stockholder meetings, sales meetings, lectures, technical and scientific conferences, training schools, and conventions. Ideal for projecting stage and screen border surround decoration, and economical, quickly-changed background scenery by rear projection to translucent screens. Available with Electric Changer which holds 70 3¼" x 4" slides which can be changed by remote push button control.

Plug into any 110-volt A. C. outlet. Easy to operate. Wire collect for dealer's name, literature and prices. Suitable trial periods arranged.

Installation at Massachusetts Institute of Technology, Kresge Auditorium.

# Trade News

George Marenzana, manager, and Miss Sonia Sperduti, secretary of the service dept., are checking in the "ten oldest."

## New Victors for Old

The hunt for the ten oldest Victor sound projectors, conducted by the Victor Animatography Company, brought to light ten Model 12's, made in 1933, all of them still in use. The oldest, Serial number 12005, is the fifth such machine made. New Model 65/10 Victor Assembly Projectors, in exchange for the vintage machines, go to: Dale W. DeArmond, Wichita, Kans.; Morrystown National Historical Park, Morrystown, N. J.; Joseph Thielmass, Los Angeles, Calif.; William Stuckel, Berwyn, Ill.; C. Leslie Thompson, Director of Studies, Kingston Clinic, Edinburgh, Scotland; William A. Ransom, Westfield, N. J.; Melrose Park Bible Church, Melrose Park, Ill.; Joseph Pavone, Providence, R. I.; Harold Ambrosch, Glendale, Calif.

## Course Leaders For NAVA Sales Institute

Institute chairman Al Hunecke announces the appointment of course leaders and faculty coordinators for the 11th Annual Audio-Visual Sales Training Institute to be held at the University of Indiana, Bloomington, July 19-23.

**Preparation and Use of Audio-Visual Materials**—Russ Yankie, Cliff Squibb, with Ed Richardson as university coordinator.  
**Sales and Business Management**—Ken Lilley, Mrs. Ann Vath; Robert Campbell.  
**Salesmanship**—Howard Holt, Guy Lam; Dr. Earl Tregilgus, Robert Cameron.  
**Applied Selling**—Howard F. Kalbfus, Miss George Allen; Marvin Dawson.

Final staffing and presentation matters were left to the Board of Governors meeting in Chicago, Feb. 27-28.

## Technifax Opens Washington Branch

A new sales branch and diazotype demonstration center has been built by Technifax Corporation at 6200 Kansas Ave., NE., Washington, D.C. It features a 100-seat auditorium equipped to conduct visual communication programs similar in scope to the 3-day workshops conducted semi-annually at the Holyoke, Mass., main plant.

## Industry-Education Interlock

An interesting example of the interlocking interests of business, education, and medical and engineering science was provided in the recent sponsorship by the Michigan Bell Telephone Company, of a (Giantview) large screen closed circuit

telecast, using a ITV-6 camera attached to the overhead operating room light of Beaumont Hospital with no other illumination. The operation involved a new surgical procedure in which Dr. Michael Nadarino, of Hahnemann Hospital, Philadelphia, repaired the bones of a shattered leg with a quick-hardening plastic foam. An audience of some 80 surgeons viewed the operation on the large screen and on two monitors in adjoining rooms.

Another low budget big screen demonstration by Giantview, at the Detroit SMPTE meeting, featured a presentation on "Closed Circuit TV in Education Today," by C. M. Braun, of the Joint Council on Educational Television, picked up on an RCA TK-201 industrial type vidicon camera and projected on a 12' x 15' screen.

## Quality Equipment Sound Investment

"Within the next ten years alone our schools will be called upon to accommodate a student body that will have expanded by 12,000,000," is the forecast made at the recent AASA meeting at Atlantic City, by J. J. Stefan, president of the school equipment division of The Brunswick-Balke-Collender Co. About 68,500 classrooms, in 10,500 schools, will be built this year, but if we are to catch up with the needs resulting from population growth and obsolescence of existing plant and equipment, "the schools must adopt industry's philosophy of capital outlay as an expenditure that must be equally justifiable in the future as in the present," according to Mr. Stefan. This calls for "quality equipment as well as quality construction," truly modern equipment "so that teaching methods are enhanced and advanced."

## Westinghouse Promises Sealed-Beam Projector Lamps

The sealed-beam principle of the auto headlamps is soon to be applied to projector lamps, according to a Westinghouse announcement. Much greater light output, low wattage, elimination of stray light and of the conventional reflector and condenser lens resulting in more compact projector design are some of the benefits promised—a year or more hence.

## Photo Scientists—Chicago, October

The 1959 national conference of the Society of Photographic Scientists and Engineers will meet October 26-30 at Chicago's Edgewater Beach Hotel. Kodak's Charles E. Ives is papers chairman.

## A-V Exhibit at World Christian Education Meeting

Sixteen camera manufacturers in Japan joined forces in presenting an audiovisual exhibit in connection with the 14th World Christian Education Meeting, in Tokyo, attended by 3,000 delegates from 69 countries.

## Da-Lite Observes 50th Anniversary

Da-Lite Screen Co. is celebrating its Golden Anniversary—it started manufacture of screens in a Chicago plant in 1909. Chester C. Cowley, president, has been with the firm for 34 years.

## Reeves Licenses Cousino Tape Cartridge

The Cousino loop cartridge for tape recorders has been licensed by Reeves Soundcraft, tape manufacturers. The cartridge permits repetition of a continuous loop of tape without rewinding or threading into the recorder. Among the applications thus far made public are telephone answering service, sleep-learning experimentation, and multiple hearing tests. It is claimed that the recording of President Eisenhower's voice, broadcast from outer space via the Atlas, was accomplished by this type of loop cartridge.

Alpex combination projector

## Movie Slide Combination Projector

One of the oldest ideas in projector design is revived in the new "Alpex" 8mm motion picture projector which, by insertion of a slide unit into the back of its lamphouse, doubles as a slide projector as well. The Edison Kinetoscope sought to accomplish this by racking over the mechanism; the Acme elevated its entire lamphouse into alignment with a standard slide carrier; an Ampro silent 16mm projector once had a slide take-off from the side of its lamphouse. The new ALPEX-500-Combination weighs 8½ pounds, has a 500 watt lamp, 17mm f:1.4 lens, retails at \$69.95 with case; the slide attachment (which can accommodate the Airequipt changers) \$24.95. Allied Impex Corp., 300 4th Ave., N.Y.C.

## Radiant Expands AV Department

In a move to give support of its audiovisual dealers, Radiant Manufacturing Corp. is increasing its AV personnel, and promises greater advertising and promotional activity. One of the sales tools provided for its dealers in a "Split-Panel" screen, one half the Radiant "Optiglow" lenticular surface, the other the conventional beaded.

## Veteran in Two New Firms

Stanley Bowmar, one of the founders and for many years treasurer of the Metropolitan New York Visual Education Association, now a DAVI affiliate, has broadened his commercial activities to include a new filmstrip production venture involving two new firms—Audio-Visual Creators, Inc., for production, and Stanbow Productions, Inc., for distribution. National Film Board of Canada and United Nations filmstrips are included in the current catalog. Prints available on 10-day approval.

## NAVA CONVENTION

PUBLIC LIBRARY-NO. 2  
 ORDER DIVISION  
 325 SUPERIOR AV.  
 CLEVELAND 14, OHIO  
 (Area 216) 525-2000

# Convention Highlights

Friday, July 24

*Educational Film Library Association*

Registration, 9 AM to 5:30 PM, EFLA Headquarters, Morrison Hotel. Screening of new films, 10 AM to noon. General session, 1:30-3 PM. Two concurrent discussion sections, 3:15-5 PM. Screening and evaluation of new films, 7:30-10 PM.

*National Audio-Visual Association*

Exhibit setups begin and registration opens, mezzanine floor, noon.

Saturday, July 25

*Educational Film Library Association*

Two concurrent discussion sections, 9:30 AM to noon. Screening of Blue Ribbon Award films, 10 AM to 5 PM. Two concurrent discussion sections, 1:30-3:30 P.M. Audio Do-It-Yourself Show, 3:30-5

PM. Screening of "Power Among Men," UN film, followed by discussion.

*National Audio-Visual Association*

Breakfast, Terrace Casino, 8 AM. First General Session, 9 AM. Grand opening of the Exhibit, 1 PM. Meeting of NAVA Board of Directors, 4 PM. Meeting of NAVA Religious Council, 7:30 PM. Annual Convention Dance Party 9:30 PM.

Sunday, July 26

*Association of Chief State School Audio-Visual Officers*

Discussion and reports 1-5 PM. *Educational Film Library Association*

General session, 9:45-10:45 AM. *National Audio-Visual Association* AV Church Worship Service, 11 AM. Luncheon for NAVA Institute Board of Governors, 12:30 PM. Religious Audio-Visual Conference, 2 PM.

*Religious Audio-Visual Conference*

Registration, 1:30 PM. Screening of "Green Lake Adventure" and discussion, 2 PM. Escorted tours of exhibits, 3-4:30 PM. Consultation clinics, 5-6 PM. "It Could Be Your Church!" demonstration, 7:30-9 PM.

Monday, July 27

*Agricultural Audio-Visual Workshop session*

*Association of Chief State School Audio-Visual Officers*

Reports and discussion of the National Defense Education Act, 9 AM to noon, 2-3 PM. Luncheon, Parlor "F," noon to 2 PM.

*Audiovisual Conference of Medical and Allied Sciences*

Registration, 8:45 AM. 1958-59 in Review, 9 AM. Report on International Film Showings, 11 AM. Experiments in AV techniques, 11:20 AM. Films and the Learning Process, meeting, 2 PM. Problems in Communication, meeting, 4 PM. General Discussion, 8 PM.

*Industrial Training Director's Association*

AV Workshop, Venetian Room, 9 AM to noon.

*National Audio-Visual Association*

Breakfast and second general session, 8 AM. Film distribution panel, 10:45 AM. Luncheon for NAVA past presidents, 12:30 PM. Entertainment film screening, 8PM.

Tuesday, July 28

*Agricultural AV Workshop session*

*Association of Chief State School Audio-Visual Officers*

Business meeting and reports, 9 AM to noon.

*National Audio-Visual Association*

Exhibitors' meeting, 8 AM. Exhibits close, 1 PM. NAVA Board of Directors meeting, 1 PM.

## Family Films FOR TEENAGERS

Films with a tremendous message of Christ—on the teenage level—in their language—demonstrating the power of Christ in young people's lives.

**TEENAGE WITNESS**  
Witnessing for Christ at home and on the campus.

**TEENAGE CHALLENGE**  
A teenager accepts the challenge to really live for Christ in the face of great opposition.

**TEENAGE CODE**  
Everybody cheats once in a while, why should this teenager be different?

NEW  
RELEASES

**TEENAGER'S CHOICE**  
The problems of early marriage.

**FRONT PAGE BIBLE**  
The Bible speaks through the newspaper.

*All five films have the deep spiritual message needed to help Christians stand for their convictions in today's world.*

• 30 minutes each—black & white—\$9.00

NEW  
RELEASES

## Family Filmstrips

### UNDERSTANDING THE BIBLE LANDS SERIES

Bible stories and events take on new meaning with this fascinating new series photographed in full color in the Holy Land. Shepherd life, home life, geography, Bible scrolls, etc. Packaged in kits, with records, from \$9.00

### TEENAGE

Four new kits of provocative filmstrips, featuring a "breezy" style of scripts, and wonderful, typically teenage art work, presenting basic Christian guidance on problems of POPULARITY and FAMILY. Kits of 4 filmstrips and 2 records, \$25.50

### KINDERGARTEN

Two delightful new sets of full-color filmstrips about "growing up" for 4 and 5 year olds. Special musical backgrounds feature related songs familiar to kindergarten children. Kits of 4 filmstrips and 2 records, \$19.50

*It's easy to use a Family Filmstrip!*

## Welcome to NAVA!

As participants in the NAVA Convention and Exhibit, as contributors to it in the form of this special issue, and also as eager-to-learn spectators — the staff of *Educational Screen and AUDIOVISUAL Guide* welcomes you to Chicago for the four most important days in the audiovisual year, July 25-28. We hope, in fact we *know*, that you'll find much of value, of interest, and much that's enjoyable too.

## This Month's Cover

The painting on our cover this month is an artist's concept of the Eidophor, a revolutionary new television projector, adaptable to color or black and white and possessing an independent light source. The projector was developed in Switzerland with the assistance of CIBA Pharmaceutical Products, Inc., which has recently set up a wholly-owned subsidiary called Eidophor Inc.

Eidophor Inc. will soon have on hand forty of these projectors, along with the world's largest mobile unit for the production of color television. The president of the new company, former Assistant Secretary of State Roderic O'Connor, has announced some very in-

teresting and ambitious plans for the future. Although these are at present limited to industrial use, the additional possibilities are fascinating.

Hans Erni, the artist, is a Swiss with an international reputation. The clarity and superb draughtsmanship of his works have made them especially appreciated by scientists, mathematicians and engineers, with whom the artist has personally expressed a kinship. He is more conscientious than most painters in maintaining an immediate contact with the public and the present day world. By eliminating the usual perspective, he is able to combine past, present and future possibilities on the same terms. These qualities have contributed to his remarkable success as painter, illustrator, muralist.

## Watch for the Blue Book!

The August issue will again be devoted to materials — all the films, filmstrips, slides, maps, models and other teaching aids that have come to our attention since the publication of last year's Blue Book. It will be an issue to keep on hand throughout the year, for consultation and advice. —ES

# "Images of the Future"

*This is the title of a valuable booklet, recently published, setting forth some very practical ideals for the future development of our country's high schools. It was prepared by J. Lloyd Trump, Director, Commission on the Experimental Study of the Utilization of the Staff in the Secondary School; appointed by The National Association of Secondary-School Principals and supported by the Ford Foundation. The editors asked and were granted permission to publish brief excerpts from this work, especially from the section "Educational Facilities," in the hope that these trends will encourage audiovisual personnel and manufacturers alike.*

## Avenues to Learning

	TEACHER	WRITING	PRINTING	FILM	RADIO	TV	RECORDINGS	MACHINES
Before Writing	✓							
Before Printing	✓	✓						
Until about 1900	✓	✓	✓					
The 20th Century	✓	✓	✓	✓	✓	✓	✓	✓

Closed- and open-circuit television to provide enrichment, magnification, simultaneous instruction in several rooms, etc.

Projectors with overhead, rear projection for writing, printing, and other presentations in black and white and color, with overlays, for use in light or semi-darkened rooms

Micro-, opaque, and other projectors for specific tasks

Electronic tape and other recordings to reduce repetition, provide uniformity, and permit re-use

Films, filmstrips, and slides of various sizes for photographed materials

FM radio to distribute information simultaneously to several rooms

Charts, pictures, flannelboards, models, mock-ups, museum materials, etc., for demonstrations

Duplicated materials to provide uniformity, involvement, and concrete illustrations

All of above that are portable should be available in project areas and materials centers

Science and language laboratory, workshop, and library supplies and equipment of best design

Self-teaching and appraisal machines—information, instructions, and questions placed on machine in advance by teachers so students can use with a minimum of teacher assistance

Self-appraisal tests—to permit self-examination and scoring

All of above that are portable should be available for students to bring to discussion group meetings as aids in explaining and presenting convincing evidence

**I**N thinking about the facilities of the secondary school of the future, these things must be kept in mind:

Educational facilities will no longer be merely a school building and its grounds.

Space within the building will be planned for what will be taught in it and how it will be taught. Installations for effective use of electronic and mechanical aids will be provided.

Educational facilities will be as different as will be the learning activities planned for the students. These learning activities will take place not only in the school building but also in separate libraries, shops, governmental agencies, business and industrial establishments, and many other places in the local community. On occasion, activities will take place in communities some distance from the school itself. This broader concept of facilities will require different kinds of control and supervision over students from those now possible, so changes in provisions for legal responsibilities will be made.

Because class groups will vary in size, the school plant of the future must provide rooms for groups of 10, 20, 50, 100, or possibly more students. A variety of instructional and resource areas will replace the present series of standard, stacked classroom cubicles, each designed to contain 30 students and one teacher. Study halls as they are now known will not exist. Instead there will be study-resource rooms where students may read, listen to and view tapes, observe films and slides, work on self-teaching and self-appraisal machines, use science and other equipment, think, write, and participate in other more or less individual study activities.

It is difficult at this time to make an intelligent estimate of the number and sizes of rooms needed in the future secondary school. The example of a 400-student school used here might require a building with less floor space per student than present ones.

The future school will make available to its students all the avenues of knowledge, appreciation and understanding. Textbooks and teacher recitations will no longer be sufficient means of contact between the student and what he wants to learn. Television, radio, disc recordings, tape recordings, films and slides, mock-ups, models, museum materials, books, magazines, pamphlets, and other mate-

# NEW

## STEREO TAPE RECORDER

For language, music, speech instruction, Newcomb introduces Model SM-310, cybernetically engineered for intuitive operation. Simple enough for students to operate. Easiest on tape. Records live stereo as well as recorded or broadcast material, and 1/2 track monophonic. 2 speeds. 10 1/2" reel capacity.

# NEW

## CLASSROOM HI-FIDELITY PHONOGRAPHS

Engineered specifically for day-in-and-day-out classroom use, new model Newcomb phonographs are more dependable than ever. New 4 speed motors, bigger speakers, more power, rubber record mat—a multitude of advanced features. Several models.

# NEW

## CLASSROOM HIGH-FIDELITY RADIOS

The finest table model radio ever built for classroom is the Newcomb AM and FM Model AFM-1500. Sensitive, powerful, stable. High acoustic output. New tone control for optimum intelligibility. Built-in AM and telescoping FM antennas. AM only model also available.

# NEWCOMB

# NEW

## PORTABLE TRANSCRIPTION PLAYER/P.A. SYSTEMS

There's a new Newcomb TR Series player for every use—from music room to athletic field. Nineteen models, choice of ceramic or magnetic cartridge, one to four speakers, power from 10 to 56 watts. Include every feature you have asked for in a portable system.

# NEW

## HEADPHONE LISTENING CENTER EQUIPMENT

For language study, library use, group-within-a-group listening, Newcomb brings you the most satisfactory listening center equipment yet offered. Eight red and black headphones of conventional design, combining high quality with low cost, supplied in compartmented case.

■ NEW STYLING—GRAY AND CINNAMON BROWN ■ NEW MOTORS, TURNTABLES, PICK-UPS, REPRODUCERS ■ Same old quality, dependability, safety... Still built with crackproof plywood cases, fabrikoid covered, metal corners, spring-suspended feet, transformer powered—all of the features which give that special meaning of quality to the name **NEWCOMB**

Note: Handy printed bid specifications are also available.

NEWCOMB AUDIO PRODUCTS CO. Department C-7.

Gentlemen: Please send me data on the following:

- STEREO TAPE RECORDER
- CLASSROOM PHONOGRAPHS
- CLASSROOM RADIOS
- AM & FM
- AM ONLY
- TRANSCRIPTION PLAYER/P.A. SYSTEMS
- HEADPHONE LISTENING CENTER

# Calendar

- July 10-11—New York State Audio-Visual Council, summer meeting, Statler-Hilton Hotel, Buffalo, N.Y.
- July 10-12—Associated Amateur Cinema Clubs, Inc., Film Festival, Conrad Hilton Hotel, Chicago, Ill.
- July 19-23—National Institute for A-V Selling, 11th annual, Indiana University, Bloomington, Ind.
- July 19-23—Cooperative Conference on Instructional Materials, University of Texas, Austin, Texas.
- July 20-31—Annual Laboratory-Demonstration Workshop, The Betts Reading Clinic, Haverford, Penn.
- July 25-28—National Audio-Visual Association Convention and Exhibit, 19th annual, Morrison Hotel, Chicago, Ill.
- Aug. 10-21—Summer Audio-Visual Workshops, Syracuse University, Syracuse, N. Y.
- Aug. 16-22—Robert Flaherty Film Seminar, 5th annual, University of California, Santa Barbara Campus, Goleta, Calif.
- Aug. 17-21—University Film Producers Association, 13th annual conference,

Purdue University, Lafayette, Ind.

- Aug. 21-22—Society of Motion Picture and Television Engineers, regional meeting, Chicago session, Purdue University, Lafayette, Ind.
- Sept. 2-13—North American International Photographic Exhibit, nineteenth annual; closing dates for prints July 24 and slides, August 7. California State Fair and Exposition, Sacramento, Calif.
- Sept. 6-11—International Conference on Audio-Visuals in the Church, 16th annual, Green Lake, Wisc. Dept. of AV and Broadcast Education, National Council of Churches, 257 Fourth Ave., New York 10, N. Y.
- Sept. 28-Oct. 1—Industrial Film and AV Exhibition, New York City.
- Oct. 26-30—Society of Photographic Scientists and Engineers, annual national conference, Edgewater Beach Hotel, Chicago, Ill.
- Oct. 26-30—National Association of Educational Broadcasters, Sheraton Cadillac Hotel, Detroit, Mich.
- Nov. 20-21—Michigan Audio Visual Association, fall meeting, Western Michigan University, Kalamazoo, Mich.

## "Images of the Future"

rials will be readily available to students.

Instructional films and video and sound tapes will originate from a central studio. It will no longer be necessary to move projectors, screens, and tape and record equipment from room to room. Full cable installations will be provided for closed-circuit television, or for any other kind of audio or video communications. Language laboratories will make aural-oral resources readily available.

A higher degree of space utilization will make the school plant an economical one. Because of the variety of methods of instruction and the variety in group sizes in the school of tomorrow, flexibility of space, furniture and equipment will be necessary. Larger rooms will be divided into small seminar rooms for small-group discussions. Auditoriums will be divided into several large-group areas so that they will be used for most of the day rather than for the 10 per cent of the school day for which they are now used.

Educational facilities of the future will be functional, flexible, pleasant, and utilitarian. Buildings will have improved acoustics, better light and ventilation control, and readily movable partitions. Architects, engineers, scientists, and educators will work together to design better equipment and supplies and better structures to house them.

These realistic plans for the future also provide for better teacher training and ample opportunity for teachers to improve their skills on the job. There will be teacher specialists, most of whom will be experts "in the use of such teaching aids as television, tape recordings, projectors, students' self-appraisal devices, and the like." In-school professional advancement is given special stress. ". . . The use of assistants and electronic and mechanical instruction aids will also be significant in advancing the professional growth of teachers after they have started to work. Through audio and video recording devices, teachers will be able to see and hear themselves teach as well as observe student reactions to their teaching. These devices will offer improved methods of self-appraisal so essential for growth."

## PIXMOBILE PROJECTION TABLE

### KEEPS YOUR EQUIPMENT READY FOR USE

Save time... save storage space. Prepare your visual presentation in advance on the portable **Pixmobile**, roll it in, show it, store your equipment on it. Sponge rubber top, large enough for both movie and slide projector. Has 4" wheels, equipped with brakes that hold on incline. Vibrationless. Several models and heights. **42" table only \$32.95.**

## OPTIVOX PORTABLE EASEL

### FOR BETTER CHART TALKS

Make a better showing with the versatile **OPTIVOX**, suitable for either floor or table. Steel working board, finished in "rite-on" green, is adaptable for chalk, charts, or magnets. Aluminum legs fold into compact unit. **Only \$44.95** Carrying case, lamps optional.

**Kodak**  
TRADEMARK

*At Valley Oaks Elementary School, Spring Branch Independent School District, Houston, Texas—selected by A.A.S.A. for showing at its exhibit of outstanding school designs—Mrs. Lois Land, Director of Special Services, says:*

**“In our modern schools,  
glass-walled rooms are hard to darken.  
That’s why we use Kodak Pageant Projectors.”**

“In keeping with modern architectural trends, our schools are built with lots of glass.

“At the same time, in keeping with modern educational thinking, we use instructional films in practically every course we teach in the Spring Branch Independent School District. And we show the films right in these hard-to-darken classrooms. So, picture brilliance is a major factor in our selection of a motion picture

projector. We have bought only Kodak Pageant Projectors for three years now, because they give us maximum brightness—and we have no maintenance troubles with them, either.”

*Kodak Pageant’s Super-40 Shutter provides 40% more light on the screen than an ordinary shutter at sound speed. Your Kodak AV Dealer has the complete Pageant story, or write for Bulletin V3-22, no obligation.*

*Kodak Pageant Projector* > **EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$6.00. With guide, \$6.30.

**The Vikings** — In full color, 47 frames, based on the Kirk Douglas production. \$7.50. With guide, \$7.80.

**A Lesson in Mythology** — Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50.

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50. With guide, \$7.80.

**Richard III** — Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50. With guide, \$7.80.

**Alexander the Great** — Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50. With guide, \$7.80.

**Adventures of Robinson Crusoe** — In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50. With guide, \$7.80.

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$3.50.

**Hansel and Gretel** — In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50. With guide, \$7.80.

**Greatest Show on Earth** — In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50. With guide, \$7.80.

**Ulysses** — In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50. With guide, \$7.80.

Prepared by William Lewin, Ph.D.

# At the head of the class!

Using the projector as a blackboard.

**THE OVERHEAD PROJECTOR** keeps the teacher in front of the class, projecting his own slides, facing his class at all times, observing reactions, and adjusting his presentation to the response of his pupils.

There is no need for a separate operator, with an accompanying system of signals. The projector complements the teacher rather than replaces him. The teacher selects his own pace, extemporizing as he wishes; commenting before, during, and after projection.

He uses the screen as a blackboard, writing or drawing at will on slides or sheets of transparent plastic, without turning away from his class. Single or multiple sheets of film are easily superimposable on the slides, allowing the teacher to unmask transparencies in progressive disclosures, or to build up several components into a composite image.

Slides are large (8" x 10"), and easy to make. Rudimentary art skills produce dramatic, colorful transparencies.

If you wish to learn more about the Overhead Projector, please write to Section OP, Visucom Laboratories, Tecnix Corporation, Holyoke, Massachusetts. Please indicate in the letter the nature of your interest.

# Effective Teaching

*Paul C. Reed*

*"We should do far more than we are now doing to enhance the prestige of the teacher and to provide him with more effective support in his efforts to improve the effectiveness of his teaching."*

Because you may have missed it, we think we should tell you something about the report from which this quotation came. It's another report on education with real significance for all of us concerned with the use of audiovisual materials. It's another top level report urging the use of modern techniques of communication in teaching.

"Education for the Age of Science" is the title covering the sixteen thousand words from President Eisenhower's Science Advisory Committee. Although prepared by the Committee's nine-man panel on science and engineering education, the report makes clear that *all* education must be strengthened to make "a stronger nation more likely to survive."

Like every important report that's been published in recent years on the problems and future of American education, this one, too, emphasizes the importance of audiovisual methods and materials of instruction. For instance, this report recommends "that present efforts be aggressively pursued and substantially expanded in bringing together leading scientists, scholars, and teachers to . . . develop and supply adequate teaching and learning aids of all appropriate kinds, including motion pictures, television, tape recordings, slides, and other audiovisual materials designed to aid the student . . . and to relieve the teacher of unnecessary burdens of preparation and instruction."

It used to be that only zealous audiovisual educators talked like that!

At another point in the report, the committee concludes that because the increasing number of students is outrunning the supply of teachers "we must find ways to increase very substantially the effectiveness of every teacher" and "we must, therefore, learn to use effectively every possible teaching aid including television, motion pictures, improved textbooks and classroom equipment."

These are important pronouncements about the importance and place of audiovisual materials in teaching and learning. These are the words of renowned scientists and educators. They have no prejudices about materials and methods. Their only concern is to improve educational standards and education's product. They believe that audiovisual materials are essential and that they must be used if teaching is to be effective. They've said this in no uncertain words.

The values of all kinds of audiovisual materials for effective teaching seem now to be finally recognized. Determining when the turning point came in this discovery may take greater perspective. It may have been, however, at the point when science education received all the attention and emphasis following the launching of the Soviet earth satellite. From that point on, education's historians may someday tell us, the integrated use of all kinds of audiovisual materials in instruction became commonplace.

Meantime, this is the Summer of 1959; and this issue of "Educational Screen and AUDIOVISUAL Guide" eagerly anticipates the excitement that always accompanies the National Audiovisual Convention and Exhibit. This year, as we near the end of the first of the five years of the National Defense Education Act, we expect the convention's discussion will reflect the urgency of the times, and that the exhibit will vividly display the industry's achievement. Surely the largest audiovisual exhibit ever assembled will clearly demonstrate through new and improved equipment and materials the ability and readiness of the audiovisual industry to meet its challenges. We wouldn't miss this year's convention for anything. We hope you'll be there, too.

# The Cousino Language Laboratory

Featuring the performance quality and reliability of the commercially successful and time tested Cousino **ECHO-MATIC\*** cartridge, with exciting new concepts in auto-loading and oral practice equipment.

The unique **MAG-MATIC\*** Educator dual channel recorder and revolutionary new **VOICE-FLECTOR\*** meet all the requirements of individual student practice in any system or location.

Installations with Cousino **AD-A-LAB\*** furniture and instructor's control console provide complete language laboratory operation.

The **VOICE-FLECTOR** performs all the functions of conventional earphones, microphone and isolation booth.

*\*Cousino Trade Marks reg. Patents pending*

THE **ECHO-MATIC** endless loop cartridge provides immediate repetition of recorded language instruction and practice material without rewinding. The Echo-Matic cartridge makes loading and start-stop operation kindergarten easy, and provides tamper proof enclosure for the tape. Available in standard laboratory playing times.

THE **MAG-MATIC EDUCATOR** in use, with the Voice-Flector in position for listening, oral practice and viewing of visuals. The Voice-Flector is acoustically designed for direct, non-electronic self-analysis of auditory response. The Mag-Matic Educator and Voice-Flector may also be used independently with other equipment.

For more information, or a demonstration by your Cousino dealer, write:

## "For Such a Time as This" *by P. H. Jaffarian*

**T**HESE words find their origin in a famous Old Testament story. Through the Providence of God, and after years of preparation, Queen Esther has been brought to the hour of opportunity which is to spell the deliverance of her people. It has ever been thus. Opportunities are made for those who are prepared to meet them.

The audiovisual field has arrived at such a time. Behind us are years of growth, preparation and devoted service. Audiovisual people in education, religion, and industry have the specialized knowledge that means good utilization of our materials and equipment. And the audiovisual industry is ready with excellent lines of equipment and materials, plus a specialized audiovisual dealer system which has been built on the basis of *service to the user*.

I am proud to be a part of this dealer organization. Over the years I have seen the many major contributions which the AV dealers have made, both personally and through our national organization, towards the increased use of audiovisual communications media in all walks of life.

Through our national trade association, a dealer organization has been built up which effectively covers the nation. Within our audiovisual business a competitive spirit exists and always will remain, but our dealers have been taught to minimize their differences and to magnify the things we hold in common. Higher ethical standards have been promoted and achieved. The annual NAVA Convention, regional meetings, and local associations have knit the organization into a huge family. The National Institute for Audio-Visual Selling, held each summer in cooperation with Indiana University, has contributed much in sales and managerial training. Its effects have permeated the entire organization. From its earliest days, NAVA has worked closely with audiovisual specialists in education, industry and the church, and broad cooperative relationships have been developed.

Suddenly, a "Sputnik Age" has burst upon us. It has brought us face to face with the fact that learning processes must be accelerated. One result of this has been a continuing increase in AV utilization in industry and business. Another, and perhaps more dramatic, result is the attention which our Federal Government has given to new educational media in the National Defense Education Act. In sharp contrast to the action of a national education conference a few

years ago in classifying AV items as "luxuries . . . next in importance to swimming pools," the U. S. Congress has clearly stated that better teaching equipment and materials are essential "if instruction and learning are to be improved" — and has appropriated many millions of dollars for their purchase.

Providentially, our Associations in the audiovisual field have arrived at the place where they are in position to render great services. DAVI, EFLA, the AV Commission on Public Information, and important groups in religion and industry provide channels for action and communication on audiovisual problems. In these critical first days of implementation of the Defense Act and of general AV expansion, these organizations have proven their value over and over again.

We in the audiovisual industry consider it exceptionally fortunate that only 30 months ago we moved the headquarters of our NAVA organization from Chicago to Fairfax, Virginia, a suburb of Washington. When the Defense Education Act was proposed, NAVA was in position to step into the breach and offer valuable assistance. Don White, our National Executive, worked closely with those who formulated the bill. Maurice Mitchell of EBF and Charles Percy of Bell & Howell testified forcefully as to the need for audiovisual provisions. Effective legislative work was done in close cooperation with the NEA and other interested organizations. With the passage of the law, NAVA produced "AV-864," a guide to its audiovisual provisions, and distributed 65,000 copies throughout the nation.

Now, in the implementation phase of the National Defense Education Act, Don White and Dennis Williams have worked in an advisory capacity with the State Departments of Education in more than two-thirds of the states, helping in the preparation of State plans. The members of NAVA have been kept informed and fully prepared for what is ahead.

A day of opportunity is before us. It appears that all of our preparation was "for such a time as this." As competent business men, we of the audiovisual industry must also be possessed of the true meaning of service. With this spirit we will not only cope with this emergency, but it will lead us into the greatest era of learning in the history of our nation.

# National Audio-Visual Convention and Exhibit

**I**N THE preceding story, NAVA president Jaffarian elaborates upon the theme of the 1959 Convention and Exhibit—"Lift the AV Standards Higher." To lead the way, a series of speeches, workshops and seminars has been scheduled, combined with the largest display of audiovisual equipment ever assembled to date. An attendance of approximately 2,500 audiovisual specialists from all parts of the country is expected, and this, together with the combined memberships of the other participating organizations, should result in most mutually beneficial sessions.

Charles H. Percy, President of Bell & Howell Company, Chicago, will be the official keynote speaker. Following him in the first general session will be Dan Forrestal, Director of Public Relations, Monsanto Chemical Company, St. Louis. Also, Dr. Elliott H. Kone, Director of the Audio-Visual Center of Yale University, will speak on "The Philosophy and Practice of the Language Laboratory," emphasizing the fact that language teachers have pioneered in the use of audiovisual media hardly touched by teachers in other fields.

The second general session will have as speakers Dr. William B. Sanborn, Director, Bureau of Instructional Materials, San Francisco Unified School District, and J. Roger Deas from American Can Company, New York City. Dr. Sanborn will speak on "The Future for Instructional Materials—a Problem in Professional Cooperation," using a historical approach and discussing current practices and potential trends in terms of mutual cooperation. Mr. Deas, whose talk is titled "The Vision of America," will demonstrate the important role of audiovisual materials in improving industrial communications, stressing the importance of "indigenatizing" basic aids to give local impact and the use of audiovisuals in creating and maintaining a "corporate image."

Again this year, both general sessions will be preceded by breakfasts in the Morrison Hotel's Terrace Casino, and the annual business meeting will take place between addresses at the second general session on Monday. Sales Meetings have been scheduled during the Convention by fourteen companies. Admission to these events is by invitation only.

## Program

### Friday, July 24

Noon Exhibit setups begin. NAVA registration opens on Mezzanine Floor.

### Saturday, July 25

8:00 AM Breakfast in the Terrace Casino. Special tables will be provided for regional groups.

9:00 AM First General Session: Terrace Casino  
Welcome by President P. H. Jaffarian  
Keynote speaker: Charles H. Percy, President, Bell & Howell Company  
Speaker: Dan Forrestal, Director of Public Relations, Monsanto Chemical Company, St. Louis Missouri

"The Philosophy and Practice of the Language Laboratory"—Dr. Elliott Kone, Director, Audio-Visual Center, Yale University, New Haven, Conn.

10:45 AM to 1 PM Open for sales meetings

1:00 PM Grand opening of the Exhibit

4:00 PM NAVA Board of Directors meets

7:30 PM NAVA Religious Council meets: Harvey Marks, Visual Aid Center, Denver, Colorado, Chairman

9:30 PM Annual Convention Dance Party

### Sunday, July 26

11:00 AM A-V Church Worship Service

12:00 Noon to 6 PM Exhibits open

12:30 PM Luncheon for NAVA Institute Board of Governors

2:00 PM Religious Audio-Visual Conference

### Monday, July 27

8:00 AM Breakfast in Terrace Casino  
Second General Session

Speaker: Dr. William B. Sanborn, Director, Bureau of Instructional Materials, San Francisco Unified School District

Annual Business Meeting

Address: "The Vision of America"—J. Roger Deas, American Can Company, New York 17, New York

10:45 AM Film Distribution Panel: William Kirkpatrick, Ideal Pictures, Buffalo, Chairman

10:45 AM to 12:30 PM Sales Meetings

12:00 Noon to 6 PM Exhibits open

12:30 PM Luncheon for NAVA Past Presidents

5:30 PM Morrison Hotel Cocktail Party for all Convention registrants

8:00 PM Entertainment Film Screening

### Tuesday, July 28

8:00 AM Exhibitors' Meeting

9:00 AM to 1 PM Exhibits open for final day

1 PM NAVA Board of Directors meets

# Educational Film Library Association

**MAJOR** features of the sixteenth annual EFLA Conference will be the language laboratory workshop, where potentialities of this medium may be explored by the participants themselves; detailed analyses of the National Defense Education Act; and the screening and evaluation of new films, including the Film Festival Blue Ribbon Winners.

## Program

Theme: MEETING TODAY'S CHALLENGE TO BUILD FOR TOMORROW

### Friday, July 24

9 AM-5:30 PM Registration—EFLA Headquarters, Morrison Hotel, Chicago

10:00 AM-12 M Screening—New Films of Unusual Interest in Art and Culture

1:30-3:00 PM General Session

Welcome—Elliott Kone, EFLA President and Director of AV Center, Yale University

Report—Emily S. Jones, EFLA Administrative Director

Introduction of Speaker—Neville Pearson, Conference Chairman

Speech: The Challenge to American Education: Wider Implications of the National Defense Education Act—L. C. Larson, Director Audio-Visual Center, Indiana University and member of the Advisory Committee to the U. S. O. E.

3:15-5:00 PM Two concurrent discussion sessions

A. "Ways and Means of Using National Defense Education Act Funds"

1. Starting the Small School Film Library

2. Fitting Materials into the Curriculum

3. The College Campus Materials Center

Chairman: Arnold Luce, Minnesota State Department of Education

B. "Preparation for the Later Years"

A discussion of the use of audio-visual materials in meeting a challenge of growing urgency

Panel: Geneva Mathiasen, Secretary, National Committee on the Aging

Martha Douglas, Director of Counseling and Employee Activities, Carson, Pirie, Scott, & Co., Chicago

Mina Brownstone, Public Relations Director, Dynamic Films

7:30-10:00 PM Screening and Evaluation of New Films, Classroom and Adult.

10:00-11:00 PM Informal Reception—Refreshments

### Saturday, July 25

9 AM to 5 PM Registration

10 AM to 5 PM Screening of Blue Ribbon Award films from the American Film Festival—there will be two screening rooms, with continuous showings. Detailed schedules will be posted on Friday.

9:30 AM-12 M Two concurrent Discussion Sessions

A. "Challenge in the Classroom"

1. How can we find and use to best advantage the existing audio-visual materials in Science?

2. What kind of AV materials are needed in mathematics, and how can we stimulate their production?

B. "Challenge in Informal Adult Education"

Is there a deepening interest among adults in Science, Art, and Recent History, as evidenced in TV programs, public library film showings, and other activity?

1:30-3:30 PM Two concurrent discussion sessions—"The World at Our Door"

A. How can Language Laboratories help students meet the challenge of a multilingual world?

Emma Birkmaier, Wayne University, Detroit

Robert Bauman, Macalester College, St. Paul, Minn.

Elliott H. Kone, Yale University, New Haven, Conn.

B. Do Travel Films help our understanding of the world?

How do they compare in audience appeal, and in accuracy, with other films on the peoples and countries of the world?

Screening: Comparative showing and discussion of several different types of film about the same country

Panel: J. W. Cosman, National Film Board of Canada

Julien H. Bryan, International Film Foundation

Others from the field of travel film production and utilization

3:30-5:00 PM Do-It-Yourself Show—The Language Laboratory in Action

A demonstration of the latest equipment, with an opportunity to try it out and to ask specific questions of the manufacturers' representatives

7:30-10:00 PM "Large Scale Plans for a Large Scale Film"

POWER AMONG MEN, new United Nations film, will be shown. Discussion of how the film was produced, why it was made, and how it will be distributed

### Sunday, July 26

9:45-10:45 AM General Session

Summary and Report on the Conference—Neville Pearson

Visual Presentation of the Conference Activities—from Polaroid slides of photographs taken during the Conference

Speaker—William Sanborn, San Francisco Public Schools

11:00 AM Religious Audio-Visual Service

Conference Information: Registration Fee of \$3.00 admits to all EFLA sessions, and to many of other organizations meeting during the National Audio-Visual Conference

# Religious Audiovisual Conference

---

**T**HE fourth annual Religious Audiovisual conference is presented by the Committee on Audiovisual Education of the Church Federation of Greater Chicago, together with NAVA. Meetings will be held this year in the Madison Room of the Morrison Hotel.

## Program

### Sunday, July 26

1:30 PM. Registration

At official NAVA desk — admits bearer to other open sessions and Trade Show

2:00 PM Moderator: Dr. Orville L. Kuhn, Supervisor for AV Sales and Rentals, Board of Christian Education, United Presbyterian Church in U. S. A.

Film: Green Lake Adventure

The International Religious Audio Visual Workshop and Its Role in the Total Work of the Church

Rev. Alva I. Cox, Director of Department of Audio Visual & Broadcast Education, the National Council of Churches

2:45-3:00 PM What to See? What to Ask?

Present your audiovisual problems

3:00-4:30 PM Escorted Tours of Exhibits

Motion Picture Projectors & Screens—Rev. John Gable

Filmstrip & Slide Projectors & Screens — Mr. Wendell Gibson

Audio Equipment—Rev. Rudolph Hartman  
Religious Films & Filmstrips—Rev. Jack E. Jones

Control Equipment, Miscellaneous — Mr. Wesley R. Doc

Non Projected Materials

4:30-5:00 PM Refreshments

Your hosts: Religious AV Materials Exhibitors at NAVA

5:00-6:00 PM Consultation Clinics

Resources and Evaluations—Rev. Alva I. Cox

Content—Rev. Donald Lantz

Equipment and Planning—Mr. William Kruse

Do-It-Yourself Techniques—Mr. James LeMay

7:00-7:30 PM Sharing the Answers

Brief reports of tour and clinic chairmen

7:30-9:00 PM It Could Be Your Church!

Role playing demonstration in which a local minister and his staff challenge an audiovisual dealer to prove the value and cost of an effective AV program

Minister: Rev. Robert S. McDonald, St. John's United Church of Christ, Arlington Heights, Illinois

Director of Christian Education: Mr. Robert Bardy, Trinity Lutheran Church, Skokie (Evanston)

Church Treasurer: Rev. Leslie Allen, First Congregational Church, Lombard

AV Coordinator: Mr. Edwin B. Carmony, Supervisors of Audio Visuals, Gary (Indiana) Public Schools

AV Dealer: Rev. Harvey Marks, Visual Aid Center, Denver, Colorado

# Association of Chief State School AV Officers

---

**T**HE annual meeting of the ACSSAVO, held this year in conjunction with the NAVA show, is the one conference of the year devoted exclusively to the programs and problems of the various state departments of education in regard to their leadership in and development of audiovisual instruction.

## Program

### Sunday, July 26, 1959

1:00-1:20 PM Greetings by the president and introduction of those present

1:20-1:30 PM Discussion of the minutes of the last meeting and treasurer's report

1:30-2:30 PM Discussion of the purposes of ACSSAVO, the new constitution, and present affiliation with DAVI. Discussion of time and place for 1960 meeting (it had been tentatively arranged to meet in alternate years, or when DAVI was in the midwest, with that organization . . . present plans call for such a meeting of DAVI in Cincinnati during 1960)

2:30-3:00 PM Development and approval of meeting agenda for remaining days

3:00-5:00 PM Reports of States

Each Chief State School Audiovisual Officer is asked to bring written reports of his state's audiovisual activities in order to conserve time required for such reports.

### Monday, July 27, 1959

9:00-12:00 AM National Defense Education Act

Each state will present a summary of developments relating to the state plans under NDEA, with particular attention to the inclusion of audiovisual items within the plan. Discussion will follow relative to further help for school systems in making decisions about the amount and type of audiovisual materials and equipment that should be included in projects being developed under Title III. Lloyd King, Chief, State Plans and Reports Section, U. S. Office of Education, has been invited to be present to serve as consultant and to indicate trends and practices developing.

12:00-2:00 PM Luncheon—Parlor "F" (2nd Floor, Morrison Hotel)

William E. Wilson, Indiana State Superintendent of Public Instruction, will speak on

"The Role of the State Department in Audiovisual Education." It is planned to hold a question and answer session following this talk.

2:00-3:00 PM Continue deliberations, NDEA, in Parlor "G"

3:00-6:00 PM Trade Show

(Note: Conference Registrants have been invited to a reception given by the Morrison Hotel 5:30-7:30 - Terrace Casino)

Tuesday, July 28

9:00-12:00 AM Dr. Seerley Reid, U. S. Office of Education, has been invited to be present and to discuss data collected in his surveys.

Business Meeting

Reports by Committees:

Legislative Committee: Ch. Bill King,

New Jersey; Garland Bagley, Georgia; Joe Murphy, Connecticut  
Study and Planning: Ch. Austin Olney, New Hampshire; Forrest Moore, Iowa  
Resolutions Committee: Ch. Clyde Miller, Ohio; Arnold Luce, Minnesota; Earl Cross, Oklahoma

Reports of Working Committees that are ready to report

Report on Audiovisual Commission on Public Information - King

Report on DAVI Membership Drive - Clyde Miller

Nominating Committee Report

Note: It is hoped that newly elected officers and board will plan to meet during and right after the lunch hour, in order to formulate plans for the coming year.

## AV Conference of Medical and Allied Sciences

---

**M**EMBERSHIP in the seventh annual AV conference is open to national non-profit and non-governmental associations or groups devoting resources to AV materials and programming in the medical and allied fields. Two representatives from each participating organization are invited to the annual conference.

Basically planned as an exchange of information on AV programs of the member organizations, the annual conference features also workshops on new developments in the AV field.

In response to repeated requests from producers and AV directors of other organizations, this year the afternoon session will be open to the public.

### Program

Monday, July 27

8:45 AM Registration

9:00 AM 1958-59 in Review

Exchange of information: five-minute comments on highlights in A-V programs given by representatives of participating organizations

10:30 AM Coffee break

10:45 AM Organization Plans

11:00 AM Report on International Film Showings, Japan - Ralph Creer, Manager, Department of Medical Motion Pictures, American Medical Association

11:20 AM Experiments in AV Techniques by Other Conference Members

11:45 AM NAVA Trade Show Highlights

Commentator: R. Getty, D.V.M., M.S., Ph.D., Professor and Head, Veterinary Anatomy, Iowa State College

12:00 Noon Lunch and Trade Show

(OPEN MEETING)

2:00 PM Films and the Learning Process

a. Principles of education

b. A-V factors which accelerate the learning processes

Commentator: Philip Lewis, Ed.D., Director, Bureau of Instruction Mate-

rials, Chicago Board of Education  
c. What makes an effective teaching-motivation film

Commentator: Carolyn Guss, Ed.D., Associate Professor of Education, Indiana University

3:30 PM Coffee break

4:00 PM Problems in Communication

a. What media for what purpose?

b. In what areas are films most urgently needed?

c. What are YOUR problems?

Commentator: Dr. E. J. Foster, Director of A-V Materials, American Heart Association

6:00 PM Dinner

8:00 PM General Discussion

A-V questions of special concern to participants

9:00 PM Business Meeting

9:30 PM Election of Officers

### MEMBER ORGANIZATIONS

American Association of Colleges of Pharmacy - Ralph Voight

American Association of Dental Schools - Marion McCrea

American Association of Podiatry - M. M. Greenfield, Marvin W. Shapiro

American College of Surgeons - Robert E. Peyton, Hilger P. Jenkins

American Dental Association - Herb Jackman

American Hospital Association

American Medical Association - Ralph P. Creer, Daryl I. Miller

American Nurses Association - National League for Nursing - Kathryn Linden

American Osteopathic Association - John J. Hank

American Veterinary Medical Association - Robert Getty

Association of American Medical Colleges - Medical Audio-Visual Inst. - Tom S. Jones, Audrey M. Skaife

Canadian Film Institute - Lloyd M. Hampson

Society of American Bacteriologists

# Industrial Training Directors' Association

---

**T**HE fifth annual Audio-Visual Workshop sponsored by the ITDA will be held in the Venetian Room of the Morrison Hotel. An attendance of approximately 200 persons is expected for a program containing much of interest to those concerned with industrial education. Registration will take place at 8:30 A.M. Monday, handled by Eliot L. Hirsch, Supervisor of Program Development, Chicago Transit Authority.

## Program

Theme: **EFFECTIVE SHOWMANSHIP IN TRAINING**

Monday, July 27

9:00 AM Welcome by Chairman, Activities Committee, C. A. Ward, American School  
Opening Remarks and Introductions by President of I.D.T.A., John Baker, Chicago Transit Authority

9:10 AM Keynote Address by Howard Kalbfus, Director, Kodak Sales Training Center, Eastman Kodak Co.

9:25 AM Custom Visual Aids. A demonstration on various aids—how to use, how to order,

where to buy—Flip Charts, Flannel Boards, Slides, etc. Question period. By Chartmasters, Inc., Chicago

10:25 AM Coffee Break and Fellowship

10:40 AM The Tape Record—Your Dramatic Agent for Employee Training. A demonstrative resumé of the many effective uses of the tape recorder as a dramatic training aid, given by Eugene Carrington, Educ. Dir. Allied Radio Corp. (Nationally recognized authority in electronics and sound; inventor of the Audio Microscope; pioneer in developing 3-dimensional sound.)

11:10 AM Black Light (Ultra-Violet) Demonstration. Using these dramatic, startlingly colorful materials as training tools—chalks, crayons, yarn, sands, powders, etc. Materials from Ultra-Violet Products, Inc., San Gabriel, Calif., demonstration prepared by Abbott Laboratories Training Staff, presented by Paul Wright.

12:10 PM Closing Remarks

12:15 PM to 4:30 PM Visit Audiovisual Exhibits.

# Agricultural Audio-Visual Workshop

---

**A** "FRATERNITY" of communications-conscious agricultural leaders will meet in Chicago at the Morrison Hotel July 27-28 for their 5th annual Agricultural Audio-Visual Workshop. Those members of "AAVW" who attended in the past, but find it impossible to attend this year's event are following the suggestions of the sponsoring publication, *County Agent & Vo-Ag Teacher*, by writing or talking to other professional leaders and urging them to attend.

The AAVW thus is not only an annual get-together but a *movement* aimed at furnishing an outlet for information assembled not only at the workshop but also between members and professional audiovisual experts. There are no dues or officers. Information will be supplied to "members" of the group by the publication which reaches about 35,000 professional agricultural workers each month.

Purposes of the workshop are:

(1) to stimulate interest among more and more ag leaders in agricultural communications.

(2) to provide training and inspiration to get more workshops started in the various states.

(3) to help agricultural leaders become more professional in presenting information to farmers, agricultural associations and other farm groups. — *Gordon L. Berg, editorial director.*

## PROGRAM — JULY 27-28

### New ideas and audiovisual tools.

Where do audiovisuals fit into the communications picture in agricultural teaching and advisory work?

Adrian TerLouw, educational consultant in the sales division of Eastman Kodak Company, opened our first audiovisual workshop in 1955. He'll be back this year to show you how to plan

your audiovisual program.

### Sharpen your exhibiting skills!

What are the common mistakes of agricultural exhibits? What will an effective fair exhibit cost?

Herbert F. McFeeley, exhibits specialist, Pennsylvania State University, was our choice as one of the best authorities to handle these questions and more!

### Utilizing better color slides.

Situation: You want a series of slides to show the results of your Extension or Vo-Ag program for the year. This would be a tremendous public relations tool — and inexpensive, too — for meetings with farmers. There are a host of *other* ways to use the handy color slide, too.

Jim Brown, manager of Grallex's visual education department will discuss "Utilization of the 35mm slide in Visual Education." We guarantee that this will be one session loaded with ideas.

### Make better use of opaque projection.

Are you in a rut? Do you realize there are many uses you can make of the opaque projector that you haven't even thought of?

Cliff Squibb, Squibb-Taylor, Inc., has been showing educators and commercial people how to use the opaque projector for many years.

### Keep up-to-date on radio and television.

Howard Knaus, extension visual aids specialist at Purdue, will give you tips on how to gear your program to the changing tempo of farm radio and television.

### Make better use of tapes for teaching.

Our team of experts will answer all your questions, such as using the microphone correctly, optimum playback methods and so on.

# EX HI BI TORS

*Once again the National Audio-Visual Association makes possible the world's greatest audiovisual exhibition. Here is the annual opportunity for manufacturers and dealers to display their wares to the greatest advantage; the time for the audiovisual public to see demonstrations and obtain information on new developments, improved models and established favorites in equipment and materials.*

*The NAVA Convention and Exhibit has successfully and steadily grown since its inception in 1947. The combined attendance of the concurrently meeting organizations has been mutually beneficial. And the Morrison Hotel contributes to the success by providing excellent facilities, including its entire first floor and mezzanine, as well as various meeting rooms.*

**Advance Furnace Company      Booths N-94 & N-95**

2310 E. Douglas St., Wichita 7, Kansas, AM 3-4232  
**Exhibiting:** Pixmobile Projector tables, Optivox Visual Aid easels, Pixmobile AV Center  
**Personnel:** C. W. DeVore, MacLean Briggs

**Ambco Inc.      Booth S-136**

1222 W. Washington Blvd., Los Angeles 7, Calif., RI 7-5131  
**Exhibiting:** School, desk type Hearing Amplifiers, AMBCO "HAT," Auditory Training Equipment (Monaural & Binaural Instruments), Hearing Testing Instruments (Audiometers), AMBCO Otometer, Oto-Chek and AMBCO Audiometer  
**Personnel:** C. Merle Brooks, H. B. Whipple, A. M. Brooks

**American Optical Company      Booths S-130 & S-131**

Instrument Division, Eggert & Sugar Roads, Buffalo 15, N. Y., Fillmore 4000  
**Exhibiting:** Opaque Delineascope, Slide Delineascope, Micro Opaque Reader, Overhead Delineascope, School Vision Instruments and other projection equipment  
**Personnel:** E. V. Finnegan, Jack P. Britton, John J. Host

**American School Publishing Co.      Booth R-120**

470 Fourth Ave., New York 16, N.Y., MURRAY HILL 5-9250  
**Exhibiting:** "Educational Business," "School Executive," "American School and University" Magazines  
**Personnel:** Craig F. Mitchell, Frank Laavy, Frank Raymond, Jack Raymond, Jim Murphy

**Ampex Audio, Inc.      Booth A-2 (M)**

1020 Kifer Rd., Sunnyside, Calif., RE 6-2110  
**Exhibiting:** Tape Recorders  
**Personnel:** Richard R. Grant, Ralph Sprague, T. J. Nicholson, Jack Coy, Stanley Paige, John Larson

**Ampex Corporation**

(Professional Products Division), 934 Charter St., Redwood City, Calif., EMerson 9-1481  
**Exhibiting:** Tape Recording Equipment

**Animation Equipment Corporation      Booth S-134**

38 Hudson Street, New Rochelle, N. Y., NE 6-8138  
**Exhibiting:** Oxberry Unistand  
**Personnel:** Edward G. Willette, Robert W. Troy

**Antrex Corporation**

856 N. Rockwell St., Chicago 22, Ill., HUmboldt 6-2726  
**Exhibiting:** Portable public address equipment, portable battery operated tape recorders, portable radios, power megaphone  
**Personnel:** Bernard Schwartz, H. Schwartz, R. Pietrucha, H. Sagalow, M. Zeitlin

Personnel: W. B. Berry, J. B. Dunbar, A. Gullborg, E. Ertman, C. Keether, M. Orner
- Ken-A-Vision Mfg. Co., Inc.** Booth D-21  
6215 Raytown Rd., Raytown 33, Mo., FL 3-4787  
Exhibiting: Ken-A-Vision Micro-Projectors  
Personnel: James Atehley, Jess Kemp, Lewis Merritt
- La Belle Industries, Inc.** Booth D-22 (M)  
Oconomowoc, Wis., LOfan 7-5527  
Exhibiting: Maestro I, II, III Sound Slide Projection Equipment; LaBelle's new automatic sound filmstrip combination.  
Personnel: Robert Rumpel, Leonard Coulson, Harry Thies
- E. Leitz, Inc.** Booth V-163 (M)  
468 Fourth Ave., New York 16, N. Y., MUrray Hill 4-3700  
Exhibiting: Leitz projectors, micro-projectors and episcopes  
Personnel: Alfred A. Novick, Fred W. Faust
- Luciphone, Inc.** Booth E-27 (M)  
5130 Edwin, Detroit 12, Mich., TR 1-3244  
Exhibiting: Tape Repeaters, Recorders and Projectors  
Personnel: Cecil Rogers
- Magnetic Recording Industries** Booth C-18 (M)  
126 Fifth Ave., New York 11, N. Y., AL 5-7250  
Exhibiting: Language Laboratory Equipment  
Personnel: Jack Kay
- McGraw-Hill Text-Film Dept.** Booths M-69 & M-70  
330 West 42nd St., New York 36, N. Y., LOnacre 4-3000  
Exhibiting: Educational Films and Filmstrips (sound and silent)  
Personnel: Fred T. Powney, Godfrey Elliott, Norman T. Franzen, J. E. Skipper
- Miller Manufacturing Company** Booth C-15 (M)  
3310 E. Roxboro Rd., N.E., Atlanta 5, Ga., CEdar 3-8258  
Exhibiting: Miller Self-Adjusting Projector Tables  
Personnel: Lee W. Miller, Miss Regina Miller, Mrs. Lee W. Miller
- Miratel Incorporated** Booth T-150  
1080 Dionne St., St. Paul 13, Minn., HUmboldt 9-7417  
Exhibiting: Closed-Circuit Television, Disaster Weather Warning and Conelrad Receivers, Vandalarm (Vandalism and Break-in Protection Device)  
Personnel: H. Eugene Kurzweg, N. C. Ritter, Paul Stevens, B. J. Klindworth, Mrs. H. E. Kurzweg, Mrs. N. C. Ritter, Mrs. B. J. Klindworth
- Mobile-Tronics** Booth E-31 (M)  
1703 Westover Road, Morrisville, Pa., CYpress 5-3544  
Exhibiting: Mobile Record Players, Mobile Tape Recorders and Combination, showing their use for language laboratory use  
Personnel: Conrad A. Baldwin, Elizabeth C. Baldwin
- Modernophone-Linguaphone** Booth M-65  
30 Rockefeller Plaza, New York 20, N.Y., Clrde 7-0830  
Exhibiting: Materials for language laboratory use  
Personnel: Max Sherover, Viva Gillio
- Monitor Language Laboratories, Inc.** Booth A-6 (M)  
1818 M St., N.W., Washington 6, D. C., REpublic 7-7646  
Exhibiting: Monitor Language Laboratory Equipment  
Personnel: John E. Medaris, Julia Lee Roberts
- Moody Monthly** Booth S-127  
820 N. LaSalle St., Chicago 10, Ill., MIchigan 2-1570  
Exhibiting: "Moody Monthly" magazine  
Personnel: Lawrence Zeltner, Evelyn Gardner, Nada Boyd
- Neumade Products Corporation** Booth T-147  
250 W. 57th St., New York 19, N. Y., JUdson 6-5810  
Exhibiting: Equipment for the storing, shipping, editing, splicing, inspecting, rewinding and production of films, plus audiovisual library equipment for filmstrips, slides, tapes and records  
Personnel: Lee E. Jones, R. E. Hempel, L. Grofsik, R. K. Riehn
- Newcomb Audio Products Co.** Booths G-40 & G-41  
6824 Lexington Ave., Hollywood 38, Calif., HOllwood 9-5381  
Exhibiting: Classroom Phonographs, Radios, Transcription Player/P.A. Systems, Stereo Tape Recorder  
Personnel: Lee W. Maynard, Robert Newcomb

## EXHIBITORS

- Ohio Flock-Cote Company, Inc.** Booth A-5 (M)  
5713 Euclid Ave., Cleveland 3, Ohio, EN 1-5300  
Exhibiting: "Visi-graph" line of flannelboards and related items. Self-stick backing paper, educational flannelboard toys.  
Personnel: Hy Terkel, Nate Terkel
- Orradio Industries** Booth C-16 (M)  
Shamrock Circle, Opelika, Ala., SHERwood 5-5771  
Exhibiting: Irish Ferro Sheen Recording Tape & Accessories  
Personnel: Nat Welch, V. C. Sales, Bill Fink, Warde Adams
- Ozalid, Audio-Visual Products** Booths N-73 & N-74  
Johnson City, N. Y., Binghamton 7-2301  
Exhibiting: Projection Equipment, Slide Production and Development, Photo Accessories  
Personnel: James Le May
- Paillard Incorporated** Booth T-143  
100 Sixth Avenue, New York 13, N. Y., CAnal 6-8420  
Exhibiting: 16mm Bolex Cameras; Som Berthiot, Kern-Paillard Lenses; Carrying Cases; Hasselblad Still Cameras  
Personnel: George Schectman, Jerry Kovanda
- Pathe News, Inc.** Booth B-11 (M)  
245 West 55th St., New York 19, N. Y., JUDson 6-8920  
Exhibiting: A new library of educational films for all scholastic levels. Authentic slide and filmstrip reproductions of religious art in full color. A series of 16mm color-sound films of religious art treasures.  
Personnel: Bob Kranz, Barnett Glassman, Stephen F. Keegan.
- Paulmar, Incorporated** Booth B-13 (M)  
1449 Church St., Northbrook, Illinois, CR 2-2762  
Exhibiting: Model 60 Automatic Film Inspection Machine, Film Library Equipment  
Personnel: R. F. Menary, J. S. Sobieraj
- Pentron Corporation** Booth R-124  
777 So. Tripp Ave., Chicago 24, Illinois, SAcramento 2-3201  
Exhibiting: Magnetic Tape Recorders and Components, Tape Decks, Preamplifiers, Audio-Visual Tape Recorder and Tape Teacher Equipment  
Personnel: George Royster, Irving Rossman, Theodore Rossman, A. B. Fields, Hope Borowski, Mary Marren
- Pepsi-Cola Company** Booth V-169 (M)  
35 E. Wacker Dr., Chicago 1, Ill., Mr. W. C. Kaisling  
Refreshments for Convention Participants, courtesy Pepsi-Cola Co.
- Photographic Specialties** Booth A-1 (M)  
5170 Hollywood Blvd., Hollywood 27, California, NO 3-9611  
Exhibiting: "Protect-A-Print," motion picture film leader for cleaning the projector  
Personnel: Lawrence F. Brunswick
- Photo Methods For Industry** Booth A-3 (M)  
33 W. 60th St., New York 23, N.Y., PLaza 7-3700  
Exhibiting: PMI magazine  
Personnel: Bill Pattis, Bob Pattis, Dan Katz, Art Silverstadt, Ed Phillips
- Picture Recording Company** Booth L-60  
1395 W. Wisconsin Ave., Oconomowoc, Wisc., LO 7-2604  
Exhibiting: Pictur-Vision Cabinet, Projectors No. 1455-C & No. 1655-C. Model 75 Projector w/Picturescope, PRC Supreme 1000-w Filmstrip Projector  
Personnel: G. E. Musebeck, George Howie
- Plastic Products, Inc.** Booth S-125  
1822 E. Franklin St., Richmond 23, Va., M1 8-8059  
Exhibiting: Plastic Vinyl Draperies for Light Control  
Personnel: Robert L. Withers, Sr., Robert L. Withers, Jr.
- Polacoat Incorporated** Booth N-77  
9750 Conklin Road, Blue Ash 42, Ohio, SYcamore 1-1300  
Exhibiting: Rear Projection Screens, "Lenscreen" for Lighted Rooms  
Personnel: L. M. Heath
- Polaroid Corporation** Booths R-113 & R-114  
Cambridge 39, Massachusetts, UNiversity 4-6000  
Exhibiting: Polaroid Transparency System, Polaroid Land 4x5 Film Holder and Film Packets  
Personnel: Rolf M. Augustin, Jr., Kemon P. Taschioglou, H. M. Bainbridge, G. F. Klauke
- Frederick Post Company** Booth T-151  
3650 North Avondale Ave., Chicago 18, Illinois, KE 9-7000  
Exhibiting: Transparencies for Color Overlays; Post Drawing Equipment, Rotolite Printing Machines  
Personnel: Clay Seipp, Bob Jones, Ray Klaus, Will Carlin, Bob McCarthy
- Projection Optics Company, Inc.** Booth M-72  
271 Eleventh Ave., East Orange, N.J., ORange 6-6500  
Exhibiting: Transpaque Junior, OpaScope Opaque Projector, Transpaque II  
Personnel: P. M. Berman
- Radiant Lamp Corporation** Booth N-76  
300 Jelliff Ave., Newark 8, New Jersey, BiGelow 3-6850  
Exhibiting: Radiant Projection and Exciter Lamps  
Personnel: Les Deutsch, Charles P. Goetz
- Radiant Manufacturing Corp.** Booths J-51, J-52, J-53, J-54  
8220 N. Austin Ave., Morton Grove, Illinois, IRving 8-9000  
Exhibiting: Projection Screens of all types  
Personnel: Adolph Wertheimer, Herschel Feldman, Seymour Jacob, Milt Sherman
- Radio Corporation of America** Booths F-33 & F-34  
Front & Cooper Sts., Camden 2, N. J., WOODlawn 3-8000  
Exhibiting: 16mm Senior and Junior Projectors, Arc Projectors, Record Players, Tape Recorders, Language Laboratory Systems  
Personnel: A. J. Platt, T. G. Christensen, T. Lehman, B. E. Greenholtz
- Stuart Reynolds Productions** Booth N-84  
195 South Beverly Drive, Beverly Hills, Calif., CR 4-7863  
Exhibiting: A psychological film on perception — "The Eye of the Beholder"  
Personnel: Mrs. Stuart Reynolds, Merrily Reynolds, Stuart Reynolds
- Rutherford Duplicator Co.** Booth S-139  
P.O. Box 13087, Houston 19, Texas, CApitol 2-0384  
Exhibiting: Rudco Projection Tables, Rudco Universal Machine Stands  
Personnel: Gus Rutherford
- Safe-Lock, Inc.** Booth T-141  
870 West 25th St., Hialeah, Florida, TUxedo 8-9532  
Exhibiting: Safe-Lock Project-O-Stands, Tripods  
Personnel: D. I. Welt, G. M. Welt, R. L. Welt, J. Childs, B. Childs, M. Childs
- Seal, Inc.** Booth L-61  
8 Brook St., Shelton, Conn., REgent 4-1643  
Exhibiting: Seal Transparafilm, Dry Mounting Presses and Dry Mounting Materials  
Personnel: W. F. Miehle
- Allan E. Shubert Co.** Booth N-79  
3818 Chestnut St., Phila., Pa., EVERgreen 6-2979  
Exhibiting: "International Journal of Religious Education" and "Your Church" Magazines  
Personnel: William B. Shubert, Allan E. Shubert, William S. Clark, Mrs. Mildred Leavitt, J. Martin Bailey

- Donnlu Siegel Corp.** Booth B-9 (M)  
148 W. Michigan Ave., Jackson, Mich., ST 4-3721  
Exhibiting: Synchro-Mat  
Personnel: Don Siegel, Jack Sanders
- Spindler & Sauppe, Inc.** Booth M-71  
2201 Beverly Blvd., Los Angeles 57, Calif., DUnkirk 9-1288  
Exhibiting: "Selectroslide" automatic Slide Projectors—new models  
Personnel: George A. Sauppe, Norman A. Sauppe, Albert Schnurpfel
- Squibb-Taylor, Inc.** Booth O-100  
1213 S. Akard, Dallas 2, Texas, RIVERSIDE 7-3595  
Exhibiting: Taylor "Spotlight" Opaque Projector, Taylor Adjusto Stand, Taylor "Spotlight" Projection Table, Taylor "Spotlight" Pointer  
Personnel: Clif Squibb, Jody Damron
- Standard Projector & Equipment Co., Inc.** Booths F-37 & F-38  
7106 Touhy Ave., Chicago 48, Ill., Niles 7-8928  
Exhibiting: Complete line of Projectors for Filmstrips and 2x2 slides, Filmstrip Previewers, Beaded and Silver Screens, Filmstrip Rewinder  
Personnel: Pat J. Kilday
- Strong Electric Corp.** Booth P-109  
87 City Park, Toledo 1, Ohio, CHerry 8-3741  
Exhibiting: Universal Arc Slide Projector, Trouperette Spotlight  
Personnel: N. Alexander
- Sylvania Electric Products, Inc.** Booth K-57  
1740 Broadway, New York 19, N. Y., JUDson 6-2424  
Exhibiting: Sylvania Photographic Lighting Products  
Personnel: R. B. Martenson, Roger Kramer, R. W. Lockman, Rush Munder, Carl Nelson
- Technical Service Incorporated** Booths I-147 & I-148  
30865 W. Five Mile Rd., Livonia, Michigan, KENwood 3-8800  
Exhibiting: "TSI Teclite," "Duolite" and "Moviematic" 16mm Sound Motion Picture Projectors  
Personnel: Paul E. Ruedemann, E. H. Lerchen, Geo. G. Collins, Wally Moon, Ed Curry, Walt Stickel, Joe Moss, Wm. Dwinell
- Transvision, Inc.** Booth S-137  
460 North Avenue, New Rochelle, N. Y., NE 6-6000  
Exhibiting: TV Classroom Receiver, TV Tenna-Table  
Personnel: Alvin Reinberg
- Ultra-Violet Products, Inc.** Booth V-168 (M)  
5114 Walnut Grove Ave., San Gabriel, Calif., CUMberland 3-3193  
Exhibiting: Ultra-violet devices and materials
- Underwriters Films** Booth S-138  
a Div. of Underwriters Supply Co., 2025 Glenwood Ave., Toledo 2, Ohio, CH 8-3361  
Exhibiting: Point-of-Purchase Insurance Sales Film  
Personnel: R. W. Miller, R. E. Harrison
- United Artists Associated, Inc.** Booth B-7 (M)  
312 Madison Ave., New York 11, N. Y., MURray Hill 6-2323  
Exhibiting: Entertainment and recreational films  
Personnel: Joseph A. Clair, Arnold Jacobs
- United World Films, Inc.** Booth M-66  
1445 Park Avenue, New York 29, N. Y., TRafalgar 6-5200  
Exhibiting: A new series of films on Basic Human Activities, "The Way We Live;" a new series of films on Shakespeare, "The World's A Stage;" a new physical education series, "The Sport of Diving"  
Personnel: L. B. Guelpa, Jr., J. M. Franey, John Desmond, Murray Goodman
- Vari-Typer Corporation** Booth L-62  
720 Frelinghuysen Ave., Newark 12, N.J., BI 2-2600  
Exhibiting: Vari-Typer Model 400—Headliner  
Personnel: G. Robinette, G. Berggren, L. Bessee, J. Bowman, R. Ehrkorn, E. Collins, G. Barnett
- Victor Animatograph Corporation** Booths R-111 & R-112  
a division of Kalart, Plainville, Conn., SHERwood 7-1663  
Exhibiting: Victor 16mm Sound Motion Picture Projectors, Victor Soundview 35mm Sound Slidefilm Projectors, Kalart and Craig Movie Editing Equipment  
Personnel: John J. Harnett, Hy Schwartz, Horace O. Jones, Mort Goldberg, Leila A. Virdone
- Victorlite Industries, Inc.** Booths N-92 & N-93  
4117 W. Jefferson Blvd., Los Angeles 16, Calif., REPUBLIC 2-4033  
Exhibiting: VisualCast Daylight Overhead Projectors  
Personnel: James J. Fitzsimmons
- Viewlex, Inc.** Booths O-96 & O-97  
35-01 Queens Blvd., Long Island City 1, N. Y., EXeter 2-0100  
Exhibiting: Slide and Filmstrip Projectors, Sound-slide Units, Automatic Slide Projectors  
Personnel: Ben Peirez, Monty Abrams, Russ Yankie, Bill Dwinell
- Wallach & Associates, Inc.** Booth S-128  
1589 Addison Road, Cleveland 3, Ohio, SWEETbriar 1-5580  
Exhibiting: Discabinets, Tape Cabinets, Film Storage Cabinets, Film Separator Racks, Filmstrip Cabinets, Reelmobiles  
Personnel: Charles D. Wallach, Arthur Wallach, Larry Oliver, Alvin Tengler
- Ware Bros. Company** Booth B-10 (M)  
317 North Broad St., Phila. 7, Pa., MARket 7-3500  
Exhibiting: "County Agent & Vo-Ag Teacher" Magazine  
Personnel: Gordon L. Berg, Al Zilenziger, Boyer Veitch
- Webcor, Inc.** Booth R-121  
5610 W. Bloomingdale, Chicago 39, Illinois, TUXedo 9-8500  
Exhibiting: Stereofonic High Fidelity Tape Recorders and Fonographs  
Personnel: George Harder, George Simkowski, H. R. Letzter, Martin Krenzke
- Westinghouse Electric Corporation** Booth I-49 & I-50  
Lamp Division, One MacArthur Ave., Bloomfield, N. J., HUMBolt 4-3000  
Exhibiting: Projection Lamps and Photo-flood Lamps  
Personnel: W. R. Wilson, F. H. Rixton, M. S. Saneraint, R. L. Allen, R. D. Reynolds, J. J. Burke, Jr.
- Wible Language Institute** Booth R-122  
Hamilton Law Bldg., Allentown, Pa., HE 7-3022  
Exhibiting: Language courses in 34 languages, many by tape, records and film strips; games, recordings and film strips for English literature and social studies, and tools with which to use them.  
Personnel: Gerald L. Wible, Mrs. Gerald L. Wible
- Wood-Regan Instrument Company, Inc.** Booth N-82  
181 Franklin Avenue, Nutley 10, N. J., NU 2-2460  
Exhibiting: Lettering Guides, Lettering Pens, Lettering Sets  
Personnel: Arthur J. Lemperle, Edwin C. Wood
- World Wide Pictures** Booth T-144  
P.O. Box 2567, Hollywood 28, California, STate 4-5515  
Exhibiting: Religious and Educational Motion Pictures  
Personnel: Brunson Motley, Dick Ross, Dave Barr
- Your Lesson Plan Filmstrips, Inc.** Booth N-80  
516 Fifth Ave., New York 36, N. Y., MURray Hill 7-2436  
Exhibiting: Educational Filmstrips  
Personnel: Hal Baumstone

# AVS

(Top) The narration and sound-control rooms. Movies can be projected into the narration room for synchronization.

(Left) The Distribution Section also contains a tape-duplicating machine and an electrofilm inspector.

(Below) AVS photographers have two studios. In the foreground, one takes a light reading before copying material for a slide. Another prepares to take a picture in the second studio.

**A** RECENT move to spacious new quarters with improved technical facilities enables Kodak's Audio-Visual Service to provide even faster and smoother production flow for the many motion pictures, slide presentations and print sets it supplies to organizations throughout the country.

About 20,000 showings of 1,200 motion picture prints, 1,200 slide sets, and 650 print sets, not including overseas bookings handled through Kodak's International Division and Canadian Kodak were supplied last year to groups interested in learning more about photography.

In addition, Audio-Visual Service assists Kodak's sales department in sales presentations, and maintains facilities that make it an ideal audio-visual "pilot plant." Besides helping the company's sales service lecture staff in preparing presentations, Audio-Visual Service also assists sales executives in producing their talks for conventions, seminars, dealer meetings, and training sessions.

# Kodak's "Pilot Plant"

In its role as an audiovisual pilot plant, the department is host to over 400 people a year from business, industry and education, who come to see the latest in audiovisual developments—ideas and equipment that might prove useful in their own operations.

Another aid to organizations is a selection of leaflets and booklets, including "Camera Club News," a publication sent to over 4,000 clubs about three times a year. It tells of new techniques, club activities and photographic competitions.

Audio-Visual Service Club programs are many and varied. Each presentation is designed for a group with a specific level of photographic knowledge. As one example, there is a slide presentation, "Introduction to Picture Making," which is ideal for beginners. For a group with more technical background, there is "Revolution in Color Printing," consisting of color slides and prints illustrating how easy it is to make color prints and enlargements.

One new slide presentation has been designed for a wide range of interests. Entitled "Our Colorful Capital," it utilizes dual-track magnetic tape recording and carries on one half a "phototechnics" discussion of the slides and on the other a more general or travelogue approach.

A tour through the "pilot plant" gives some idea of what is seen by the hundreds of visitors who come to find out "how we do it." The new facilities, in which jobs begun in the editorial and production planning offices move in logical order through the art production, photography, laboratory functions, and sound recording to the distribution section, makes the Audio-Visual Service story realistic to the visitor seeking knowledge of advanced techniques.

The entrance to Audio-Visual Service is a reception room serving both as a welcoming area and a communications center for paging persons within AVS.

In adjacent editorial and production planning areas are offices, a production planning room, and two conference rooms. New story boards make for easier planning of lectures in the production planning room. Here also is a file of some 8,000 master slides from which lecturers may choose. One conference room features three rows of slide sequence illuminators that allow several persons to arrange slide talks simultaneously.

With the format of the presentation decided, the artist prepares the needed cartoons, charts, lettering and other art. Finished, the pieces are taken to the photographic studios.

In the two studios, the photographers also take other required color and black-and-white pictures of Kodak products or other subjects for prints or slides. If one studio isn't large enough for the picturetaking, the two can be combined.

In the laboratory area, AVS has facilities for making special Ektacolor prints properly balanced for copying. A chemical mixing area, convenient to the processing rooms, permits chemicals to be mixed on demand for special black-and-white and color processing. A new light-finishing area facilitates washing, drying and mounting of prints.

Slides, prints, or art work requiring duplication proceed next door to a copying room. A new optical printer, primarily for copying slides or producing filmstrips, has been added to the duplicating equipment. Thousands of glass-mounted slides are required yearly for the packaged slide lectures.

AVS has a sound-recording area consisting of narration and sound control rooms. The former is constructed like those of many broadcasting studios—double walled with floor and ceiling of spring construction. Thus the lecturer can tape-record a talk without fear of outside noises.

Movies can be projected into this narration room so that anyone making a magnetic Sonotrack recording on motion picture film can synchronize his narration with the picture.

The sound control room is equipped with two professional console tape units and two turntables for the taping of talks and addition of music and sound effects. These can also record sound emanating from the adjacent projection room.

The 39-seat miniature theater with a built-in wide-screen enables lecturers to rehearse and preview their programs. It serves as a demonstration room for visitors on how to present audiovisual programs. The room lighting, motion picture and slide projectors are controlled from the lectern. Remote control of slide changing is possible from three different locations in the theater.

Final step in the logical sequence of audiovisual aids production is the AVS distribution center. Located adjacent to the AVS laboratories, this section maintains, schedules, and routes the package programs of slides, print sets, and movies so they arrive on schedule for meetings throughout the U. S. Because of the volume of visual aids handled, electronic film inspection equipment and high speed recording tape duplicators are utilized.

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

## Technology And You

(Neubacher Productions, 10609 Bradbury Road, Los Angeles 64, California) 13 minutes, 16mm. sound, color, 1959. \$130.

### Description

*Technology and You* defines technology and shows its applications in transportation; community planning; architecture; automation; electrical; atomic, and solar power; and research. It then relates present technological achievements to the roles the students today may play in future advances in this area.

The film opens with a series of school scenes showing students engaged in a variety of learning activities. It stresses that everyone must have a salable skill; therefore, the knowledge acquired in school is very important.

Transportation's role in the technical age is illustrated in both air and highway travel. The speed provided by jet and turbo-prop planes saves travel time, permitting increased opportunities for travel and personal contacts which improve understanding between individuals and nations. The contribution of engineers to transportation is not limited to improving airplane design and engines. Highway engineers' improvements in road building techniques have brought freeways which speed traffic by reducing congestion and thereby increasing safety.

As the transportation improves, new communities will develop on the outskirts of the cities. The film illustrates some of the roles of technology in solving the various problems presented in community development, such as recreation, streets, shopping facilities, and zoning.

From the problem of community development, the film makes a transition to the designing of all types of buildings — architecture. The trim, bright, functional design of today's buildings is achieved through use of new and colorful materials, such as aluminum, stainless steel, and ceramic tile. The work of artists, designers, and landscape architects also must be incorporated into planning today's buildings.

Automation will provide relief from hard labor and tedious jobs, releasing people for more creative activity and extra hours of leisure time. In industry this will mean jobs for electronics

experts, mechanical engineers, and tool designers. Automatic calculating and office machines will handle many business procedures and mathematical problems. This will increase the need for mathematicians, programmers, and operators.

Shifting to machines will call for increased power and the sources will come from hydroelectric power and atomic and solar energy. Atomic energy will also produce materials useful in medicine, industry, agriculture, and research. All these areas will need specialists to develop the present advances into the future uses.

It is in the laboratory that the film shows the role research plays "in tomorrow's adventures in technology." Scientists and research engineers will be in great demand in the areas already presented and in the fast developing area of space travel.

Concluding with a montage of former scenes and views of future cities, the film suggests that the student should begin to prepare now for his role in the age of scientific exploration, and queries, "What role will the student play in this new age?"

### Appraisal

*Technology and You* offers teachers in the intermediate grades and junior high level, an opportunity to show pupils the achievements of modern technology and the role they can play in technology's future. This film gives pupils "food for dreaming" in a well-paced, attractive format with the scenes flowing smoothly from one sequence to another. The technical quality of the photography and sound is excellent. In the classroom the film could provide a good point from which to begin a discussion on the job opportunities and preparation required to qualify for a position in science and engineering. In addition to classroom use it could serve as the center of an assembly program at the junior high level to help increase interest in science classes and encourage students to plan on enrolling in high school science classes.

— Richard Gilkey

## Alphabet Conspiracy

(Produced for Bell System) 60 minutes, 16mm, sound, color, 1959. Apply to your nearest Bell Telephone System office for use. A teacher's guide and student's guide are available.

### Description

*The Alphabet Conspiracy* discusses the importance of language to all peoples in the world through a dramatization of the science of linguistics and which is based on a plot to destroy the alphabet by the Mad Hatter and Jabberwock of *Alice in Wonderland*.

Dr. Frank Baxter as Dr. Linguistics sets the scene as he muses about language on a walk down a neighborhood street one summer evening and how language is interwoven with the intimate history of mankind. He invites the viewer to visit Judy, a 12-year-old, who is attempting to make sense out of her grammar homework. Fatigued by her efforts, Judy falls asleep and dreams that she is in a strange world where all objects such as chairs and tables are much bigger than she is.

The Mad Hatter and Jabberwock make their appearance as the Mad Hatter, played by Hans Conried, explains their plot to murder the alphabet. The arrival of Dr. Linguistics disrupts the conspiracy and the letters which have been dancing around in an animated sequence scurry away to hide. He explains that alphabets are the basis of writing for all of the over 5,000 different languages which have alphabets. When the Mad Hatter suggests that they do away with the man who invented the alphabet, Dr. Linguistics laughingly informs him that mankind has used an alphabet for over 5,000 years.

Using a globe and an animated sequence of spreading branches from a tree trunk across a map, Dr. Linguistics explains that languages began before civilization and once started grew and changed as people spread over the earth. He illustrates how Latin was changed into modern Sardinian, Spanish and Portuguese, Dalmatian and Rumanian, Catalan and French Provençal, and Rhetoromance. An animated scene shows a child saying "father" in the different languages and explains that the various words are similar.

Dr. Linguistics points out that the babbling of babies is universal but develops into a speech pattern by the sixth year. The Mad Hatter is jubilant because this seems to bear out his contention that the alphabet provides the building blocks for language. Dr. Linguistics corrects him by saying that sounds are the basis of language and

that linguistics is the science of language sounds.

An animated sequence showing how Von Kepelin invented a talking machine in 1780 illustrates how a number of sounds combine to make language and points out that the basic components of a speech sound mechanism include the lungs, vocal cords, mouth, palate, and nasal cavities. Slow-motion and X-ray photography demonstrate how all of these mechanisms are utilized in speech. The Mad Hatter revises his previous plan to destroy the alphabet and now concentrates his attention on the destruction of vowels and consonants, however, Dr. Linguistics warns him that phonemes are the basic sounds of language, not letters or vowels. Judy does not know what a phoneme is and Dr. Linguistics explains how they are made.

The Mad Hatter and Jabberwock undertake to demonstrate how language is not needed for communication at all by doing a pantomime of the rhyme, "one-two, buckle my shoe." Dr. Linguistics agrees that there are other forms of communication in addition to verbal. He directs them to an over-size film viewer and asks them to turn the two cranks to operate the machine which shows several instances of such communication as whistling speech of La Gomera in the Canary Islands, African drummers, and Sioux Indian sign language. When the Mad Hatter scoffs at the thought of animal communication, Dr. Linguistics redirects his attention to the viewer where a sequence demonstrates the cry of the crow, the warning of a squirrel, and the dance of the honey bee. He explains that the animals' minds work almost automatically to sounds, smells, and motions; they receive messages from the outside through sense organs and react instinctively, but these phenomena do not constitute a true language.

At this point, Jabberwock produces a parrot and triumphantly points out that this bird can talk. Through the ensuing conversation it is explained that some animals may imitate human speech sounds but they are unable to attach the appropriate meanings to these sounds, hence they can not truly speak a language. He points out that man is the only one of earth's creatures which has true speech and it is this which distinguishes man from beast. It is brought out that the arrangement of words in a sentence is just as important to meaning as the individual words themselves.

Brief views of the Eskimo in his world of snow, the Trobrian Islanders storing yams, and the Arabians on camels are shown and it is explained that the vocabularies of languages are

developed from the vital experiences of people everywhere and that their language give clues of the things which are most significant for them. For example, he points out that the Hopi language seems to ignore the passage of time and has no tenses.

Pioneers in the study of languages are pictured, including Franz Boas, Leonard Bloomfield, and Edward Sapir and their outstanding contributions to the field are pointed out.

The Mad Hatter arranges a mad tea party for Judy and Dr. Linguistics. His other guests include a jazz musician, an advertising press agent, and a Montana cowboy each talking his own "lingo." The purpose of the party is defeated, however, when Dr. Linguistics understands them all per-

fectly and explains that each of the patterns of speech could be called a dialect, not a language, and that dialects and occupational vocabularies give language interest and color. An animated sequence is presented in which two linguistic detectives question a suspect in an attempt to determine his place of origin. After having the suspect pronounce a series of words they are able to do this accurately. Dr. Hans Kurath then demonstrates on a map of the United States the dialect regions of the country which are bounded by isoglosses and he explains the basis of such divisions. Arrows indicate the direction of flow of the dialects as the popu-

# CORONET

observes its 20<sup>th</sup> Anniversary  
 offering 60 outstanding new teaching films

The sixty films listed here represent Coronet's contribution to education during the period from October 1, 1958 through September 30, 1959—full year of concentration on the finest in educational films.

Fifty-two of these films were produced with the collaboration of leading educators and under the careful scrutiny of experts in film production—assure accuracy of content and sound educational approach. Each has been in production from one to three years.

The other eight were carefully selected from more than 150 new films produced by others and offered to Coronet for distribution.

Most of these new films are listed and described more fully in the 20th Anniversary Catalogue of Coronet Films. Virtually all are available in a choice of full, natural color or in black and white.

Simply use these pages as a check list to request preview prints of the Coronet films which interest you. There is no obligation, except for

## ART

- Let's Draw a Baseball Player** (8 min.) Cartoonist Frank Webb explains and illustrates how simple and interesting drawing can be. Distributed. B&W only. *Primary.*
- Let's Draw a Puppy** (8 min.) Children learn the basic techniques of cartooning and line drawing with Frank Webb. Distributed. B&W only. *Primary.*
- Let's Draw Uncle Sam** (8 min.) The life-like, familiar figure of Uncle Sam is this film's subject of how to draw with Frank Webb. Distributed. B&W only. *Primary.*
- Rembrandt: Painter of Man** (18½ min.) More than sixty original paintings chronicle the human likenesses of this great genius. Distributed. *Junior, Senior High.*

## FOREIGN LANGUAGES

- Spanish: Introducing the Language** (11 min.) Colorful scenes of the Spanish world introduce the language and stimulate interest in learning it. *Senior High.*

## GUIDANCE

- Are You Popular? (New)** (11 min.) A completely up-to-date re-make of a film classic which guides young people in achieving popularity. *Senior High.*
- Beginning Responsibility: Books and Their Care** (11 min.) Simple instructions on the care of books to help children appreciate them more. *Primary.*
- Making the Most of Your Face** (11 min.) How to create facial beauty through health, skin care, hair styling, and intelligent makeup selections. *Senior High.*
- Who Should Decide? (Areas of Parental Authority)** (11 min.) Typical problems of teen-agers are raised concerning child-parent conflicts. *Senior High.*

## HEALTH AND SAFETY

- Health Heroes: The Battle Against Diseases** (11 min.) The stories of five great scientists—Van Leeuwenhoek, Jenner, Pasteur, Koch and Lister. *Intermediate.*
- Tommy's Healthy Teeth** (11 min.) When Tommy has a cavity filled, he learns of the importance of regular dental check-ups and what the dentist's office is like. *Primary.*

## LANGUAGE ARTS

- The Cuckoo Clock That Wouldn't Cuckoo** (11 min.) In colorful animation, a silent cuckoo is set happily singing again by the master clockmaker. *Primary.*
- Spotty the Fawn in Winter** (11 min.) Spotty finds the strange, new world of snow and is forced to learn how to survive his first winter. *Primary.*
- Ward Building in Our Language** (11 min.) Examples show how words are formed—by adding prefixes and suffixes, and by combining words. *Junior High.*

## PHYSICAL EDUCATION

- Let's Dance** (13½ min.) Shows clearly and simply how to hold one's partner, seven basic steps, and the pattern of a typical dance step. Distributed. *Junior, Senior High.*

## PHENOMENA

- Beyond Our Solar System** (11 min.) Telescopic motion pictures show stars, nebulas, constellations and galaxies beyond the Milky Way. B&W only. *Intermediate.*

**Boats: Buoyancy, Stability, Propulsion** (13½ min.) The factors which give boats their useful stability, why they float, and methods of propulsion. *Junior High.*

**Engines and How They Work** (11 min.) Operating principles of steam, gasoline, Diesel, turbine, jet, and rocket engines. *Intermediate.*

## BIOLOGY

**\*Aristotle and the Scientific Method** (13½ min.) Aristotle's contributions to the development of the scientific method, particularly in biology. *Senior High.*

**Growth of Flowers (New)** (11 min.) Time lapse photography permits views of familiar flowers sprouting, struggling for sunlight, and bursting into bloom. *Intermediate.*

**The Human Body: Nervous System** (13½ min.) Emphasizes basic functions of the nervous system, its major organs, and principal areas of the brain. *Senior High.*

**The Human Body: Reproductive System** (13½ min.) Explains the similarities and differences in the male and female systems and how they function in the creation of new life. *Senior High.*

**Life in a Cubic Foot of Air** (11 min.) Viewed through the microscope are the particles of yeast, molds, bacteria, amoeba, and pollen in the air. *Junior High.*

**Partnerships Among Plants and Animals** (11 min.) Close views of three types of partnerships between animals, between plants, and between plants and animals. *Intermediate.*

**Reptiles and Their Characteristics** (11 min.) A survey of the common differences and similarities among snakes, lizards, turtles, crocodilians, and the tuatara. *Intermediate.*

## CHEMISTRY

- Acids, Bases, and Salts** (22 min.) A description of the properties and uses of the chemical compounds whose water solutions contain ions. *Senior High.*

**The Colloidal State** (16 min.) A definition of colloids, showing how they differ from suspensions and solutions, their preparation and uses. *Senior High.*

**Hydrogen** (13½ min.) An historical background, which also shows how hydrogen is produced, its properties, and its uses in such new developments as nuclear energy. *Senior High.*

**Ionization** (18½ min.) The theory of ionization, including description of electrolytes, dissociation, solvents, electrovalent and covalent compounds. *Senior High.*

**Nitric Acid Compounds and the Nitrogen Cycle** (18½ min.) Derivation, properties, and uses of various nitric acid compounds and an illustration of the nitrogen cycle. *Senior High.*

- Nitrogen and Ammonia** (16 min.) Examination of the properties of molecular nitrogen and some of its simple compounds, with emphasis on ammonia. *Senior High.*

- Solutions** (16 min.) Definitions of basic terms including solutions, solute, and solvent, the factors which influence solubility, and practical applications. *Senior High.*

- Water for the Community** (11 min.) The complete treatment of water prior to distribution in the community and the role of chemistry in correcting problems. *Junior High.*

## PHYSICS

- \*Galileo** (13½ min.) An exciting picture, filmed in Italy, of Galileo's theories and new discoveries made in the face of continued strong opposition. *Senior High.*

- \*Isaac Newton** (13½ min.) Against the background of Newton's age and the influences of his early years, introduces four of his greatest scientific achievements. *Senior High.*

## SOCIAL STUDIES

- Communication in the Modern World** (11 min.) The importance of local, national and international communication with examples drawn from contemporary life. *Intermediate.*

- Helpers in Our Community** (11 min.) Shows how street repairman, doctor, storekeeper, bus driver and others work together for a good community. *Primary.*

- Our Family Works Together** (11 min.) How a family playing and working together makes a home a happy place in which to live. *Primary.*

## AMERICAN HISTORY

- American Indians Before European Settlement** (11 min.) Indian life and culture in five basic regions of the U. S. before the coming of Europeans. *Senior High.*

- Colonial Shipbuilding and Sea Trade** (11 min.) Factors leading to the development of colonial sea trade and how colonial trade routes were established. *Intermediate.*

- French and Indian War** (11 min.) The causes and events of the War and its result—England's control of the North American continent. *Senior High.*

- The Labor Movement: Beginnings and Growth in America** (13½ min.) Early developments of the labor movement and how labor achieved important goals. *Senior High.*

- Spanish Colonial Family of the Southwest** (13½ min.) A re-creation of the self-sufficient way of life on haciendas in the early 19th century. *Intermediate.*

- Westward Growth of Our Nation (1803-1853)** (11 min.) The exciting story of the expansion of the United States from the Mississippi to the Pacific. *Intermediate.*

- William Penn and the Quakers (The Pennsylvania Colony)** (11 min.) How the free colony of Pennsylvania grew and prospered under Penn's leadership. *Intermediate.*

## GEOGRAPHY

- Geography of South America: Five Northern Countries** (11 min.) Economic concepts related to land and resources in Venezuela, Columbia, and the Guianas. *Intermediate.*

- Geography of the United States: An Introduction** (11 min.) A comprehensive overview of the geographical and human resources of the U. S. *Intermediate.*

- Greece: The Land and the People** (11 min.) A picture of Greece today, relating important geographical features to social and economic conditions. *Intermediate.*

- Industrial Canada** (16 min.) The dramatic changes of the last fifty years which have brought Canada from an agricultural nation to a prosperous industrial one. Distributed. B&W only. *Intermediate.*

- Life in the Alps (Austria)** (11 min.) A picture of the activities and seasonal migrations up and down the mountains in the Austrian Alps. *Intermediate.*

- Treasures of the Forest** (13½ min.) Outlines the values of trees in Canadian forests and shows varied uses, particularly in making paper. Distributed. B&W only. *Intermediate.*

- Turkey: A Strategic Land and Its People** (11 min.) Turkey's unique geographical position and its affect upon recent developments in that country. *Intermediate.*

## WORLD HISTORY

- Ancient Paestum: City of the Greeks and Romans** (21 min.) Doric temples, civic structures, beautiful artifacts illustrate life in this Greek colony of 6th century B. C. Distributed. *Senior High.*

- The Calendar: Story of its Development** (11 min.) How primitive man, the Egyptians, Babylonians, and Romans contributed to the systems which led to our modern calendar. *Senior High.*

- Decline of the Roman Empire** (13½ min.) The internal social and economic forces and the external barbarian threats which brought about Rome's decline. *Junior Senior High.*

- Germany: Feudal States to Unification** (13½ min.) Stresses the years from 1815 to 1871—the period when Prussia dominated the unification of Germany. *Senior High.*

- Life in Ancient Greece: Home and Education** (13½ min.) How an Athenian family of 440 B.C. dressed, worshipped, went to school, and worked. *Intermediate.*

- Life in Ancient Greece: Role of the Citizen** (11 min.) A re-creation of political and economic life showing responsibilities and privileges of citizens. *Intermediate.*

- Rise of the Roman Empire** (13½ min.) The factors affecting the rise of Rome from tribal beginnings to a mighty Empire. *Junior, Senior High.*

## FOR CHRISTMAS

- Christmas on Grandfather's Farm (1890's)** (2 reels). All the essentials of an old-fashioned Christmas—a sleigh ride, Bible reading, decorating the tree and the presents. *All Grade Levels.*

\*Films to be released in September, 1959.

# CORONET FILMS

Twenty Years of Progress  
Producing the Finest Educational Films

Coronet Building, Chicago 1, Illinois

## HOW TO OBTAIN CORONET FILMS

### Preview:

Prints of all Coronet films are available for preview by those who desire to make selections for purchase. There is no obligation except for return postage. Just indicate on these pages the films you would like to evaluate and send them to Coronet Films. Or you may simply send a list of your selections.

### Purchase:

Prints of all Coronet films on these pages are available at \$60 a reel in black-and-white or at \$110 a reel in color, with proportionate prices applying to more or less than one reel.

### Rental-Purchase:

Prints of these films may be purchased outright at the prices quoted above or obtained under the generous provisions of the Coronet Rental-Purchase Plan. See page 4 of the 1959-60 catalogue for details.

Preview requests or purchase orders should be sent to Coronet Films

## FILM EVALUATIONS

(Continued from page 349)

lations moved out of their original regions.

Impressed with the progress of linguistics as a research discipline, the Mad Hatter wants to see the machines which this science uses. To oblige him, Dr. Linguistics explains the principles of sound in the phonograph, telephone, radio, and motion picture. To demonstrate how an optical sound track works, an animated scene pictures the sound track as it moves in from the side of the film and discusses the principles involved in electronic sound. A further survey of the "hardware" used in the study of linguistics is made and includes the sound spectrograph, the automatic digit recognizer, the voice typewriter, and the dictaphone.

Scenes of the United Nations symbolize the need to achieve understanding through language. Dr. Linguistics describes the role of the United Nations in contributing to the compatibility and understanding among mankind.

Still not convinced, the Mad Hatter spreads gunpowder to a stack of books and lights the powder. At the same time, Dr. Linguistics is pointing out that it is language which made Jabberwock and him immortal and that without words he would not exist. Impressed with his new status of immortality, the Hatter and Jabber return to the *Alice in Wonderland* book but permit the gunpowder to continue burning. In the midst of the resulting explosion, Judy awakens from her dream, the proportions of the surroundings return to normality, and Dr. Baxter enters and offers to help with her homework.

### Appraisal

*The Alphabet Conspiracy* is directed toward a large audience. In addition, it has definite application as an introductory film in the study of language on the intermediate and junior high level. It also provides a general introduction to a unit on sound and its relationship to communication in elementary school science. One member of the evaluating committee suggested its use on the college level and stated that, "It makes a great deal about language conscious to one for the first time—at least to one who has never troubled himself with language except as he saw it handled in the traditional classroom." Several other members of the committee felt that the entertainment technique used to present the material in the film detracts from its overall effectiveness for adults, however, they recognize the added ap-

peal this element provides for the younger classroom audience. The fact that the film is logically divided into two thirty-minute presentations increases its usefulness for the school as a convocation or classroom film.

— O. E. Bismeyer, Jr.

## The House Fly

(Encyclopaedia Britannica Films, Wilmette, Illinois), 17 minutes, 16mm sound, color, 1958. \$180. Teacher's guide available. Second Edition.

### Description

*The House Fly* deals with the reproductive cycle, structural characteristics, feeding habits, and methods of control of the house fly. This film portrays in startling realism the potential dangers of the house fly in spreading disease and death to man and animals, and prescribes some methods of control of the house fly menace.

*The House Fly* opens with a model of the earth spinning in space as flies light and crawl aimlessly across its surface. The narrator introduces *musca domestica*, the house fly, which has no bite or sting but which is a carrier of typhoid fever, diphtheria, tuberculosis, leprosy, cholera, hookworm, diarrhea, anthrax, gangrene, and numerous other diseases which bring death to mankind.

Since the fly is a ceaseless explorer of his environment, a typical sequence of his stops along a twenty-mile journey is shown, including a spotless kitchen where food is being prepared, a filthy alley, an outdoor privy, a decaying carcass of a cat, a dump, and then to baby's birthday cake as baby playfully slaps at the flies while she eats. The next scene shows baby in her crib, crying because of a sickness left by the flies as they stopped along the way.

In the film it is pointed out that the feeding habits and the structural characteristics of the fly make it a dangerous carrier of disease germs. A close-up of the house fly is shown and its structure is studied. The fly is described as a true insect, a *diptera*, whose body is covered with bristle-like hairs which catch up the filth on which it feeds and transports it to the next stopping place. Its body is shown in extreme close-up and the body parts are identified: the head, thorax, and abdomen. The compound eyes and three ocelli, the antennae, and proboscis are pictured in natural photography and their functions illustrated. Following the fly as it feeds alternately on filth, an open picnic lunch, and some discarded fish heads, the camera shows the feet and legs of the fly from underneath and explains the structure

of the legs and pulvilli that enable the fly to travel over ceilings and other surfaces in its excessive explorations. Next the fly is seen walking about on a fish dinner as it is being prepared. A similar walk across a prepared culture dish reveals that the fly's feet are covered with germs that grow in food on which it has trespassed.

An animated diagram is used to illustrate the process of feeding and digestion in house flies. The digestive system extends through the thorax and abdomen, and with animated diagrams the process of softening food by salivation and regurgitation of partly digested food from the crop is outlined. After the fly sucks up the newly acquired food into its crop where it will be passed to the stomach for digestion and elimination to make fly specks, the fly moves on to a surface which a man is eating.

The reproductive cycle of the house fly begins with eggs which are laid in an unkept garbage pail or manure pile. The female fly is pictured as she extends her ovipositor and lays from 100 to 150 small eggs in a warm germ-laden place. The eggs hatch into maggots in eight to twenty-four hours in warm weather. Then they develop through three instars as they slither and slide and molt until they reach full growth of about a half-inch in

length. The slow-motion camera catches the locomotion of the maggot in extreme close-up and with time-lapse photography the larva is shown as it develops into the pupal stage.

After five days in warm weather the fly uses its expander to escape from the pupal case and is portrayed in live photography as it struggles upward through debris using its expander and legs to emerge to the surface of the earth to harden into an adult fly.

A multitude of new generation flies buzz about, infecting animals in a dairy barn and journeying about the neighborhood. A series of short scenes contrast the ineffective methods of fly control with rapid breeding rate by alternately cutting from a scene of a swarm of newly bred flies to a housewife with a fly swatter, from a breeding barrel of maggots to a spider capturing one fly in his web, from a hand bomb of insecticide to a housewife at a sanitary garbage disposal pail where the narrator points out that personal sanitation is a more effective method of fly control.

The personal sanitation of a neighborhood is compared with unsanitary conditions of a nearby locality in scenes of an unkept yard in a slum, a dairy barn, and a roadside dump. *The House Fly* points out that community group efforts in sanitation are

necessary in controlling the reproduction of house flies through burial, incineration, and chemical treatment of garbage and sewage. It illustrates the benefits of proper sanitation as it portrays healthy people enjoying the recreation areas and fishing streams.

#### Appraisal

This film is of exceptional quality — technically and structurally. It gets its message across with startling realism which should shock the audience into the recognition of the house fly as a serious health menace and a dangerous enemy rather than just a household pest. Some of its scenes may jolt the audience as no attempt to soften the message of the film has been made by the producer.

Teachers in the upper elementary through high school grades should find this film useful in teaching sanitation. The treatment of the structural characteristics of the fly is detailed enough to make this film a welcome tool for showing the body characteristics and functions in this insect in upper level classes. Adult groups should respond to this message on sanitation and understand why sanitation is important and requires diligent consideration.

— William A. Wheeler

# AUDIO

by Max U. Bildersee

It should be an exciting year—audiowise—coming up just ahead of us. There are several stimulating new projects on the horizon—and they should make the audio of audiovisual even more important in the school program.

The big jump, of course, will be in the foreign language field. We anticipate at least one new series of recordings in elementary school languages. The demand for a continuous sequence for instruction in grades four through six is going to be met . . . if the rumors we hear are cor-

rect. It is our understanding that within the forthcoming twelvemonth there will be recordings, teaching instructions and manuals, and amply illustrated workbooks in at least French and Spanish. These recordings will be prepared with the teacher in mind, they will be done by linguists, and they will be intended for both teacher and student to progress together.

Lest we be accused of forgetting the importance of the instructor—and no instructional medium has yet been found which minimizes the importance of good classroom instruction—we hasten to state that these materials will be a stop-gap (but a highly useful one) pending the training of elementary teachers in foreign language skills—or the training of language teachers in the area of elementary education.

But—the materials are in the planning stages now and production can be begun shortly. The objective of the instruction will be the development of facility in communication in the foreign tongue. Through listening, hearing and speaking the language in a series of progressively more difficult and complex exercises (from words to phrases to sentences) it is anticipated that the arts of communication—oral communication—can be partially mastered.

Secondary school language laboratory enthusiasts will be delighted to know that, shortly, new recordings for both dictation and comprehension practice will be available. These will

be taped recordings and the material will be taken largely from standardized tests for second and third year students. The recordings will be accompanied by simple printed or mimeographed material so that, in effect, a self-examination device for student is under development. Whether you are using a simple or complex language laboratory, these recording promise to be useful.

And the school (or student) without such facility will be able to use this material if only a tape-player (3.75 ips) is available. This should be useful for encouraging the adept student to progress at his own rate of learning, even to the point of accomplishing three years' work in two.

This represents an opportunity to individualize instruction for the bright student as well as for the slow learner; to help the 'absent' child make up lost work; and to give all students the opportunity to hear a variety of voices, both male and female, to know the intonations of the language being studied and to practice the art of listening.

The annual Connecticut Audio-Visual Education Association meeting a few weeks ago was devoted to discussions of THE LANGUAGE LABORATORY. This meeting was sponsored jointly by the association and the State Advisory Committee on Foreign Language Instruction.

From all corners of the State several hundred audiovisual and language specialists gathered in New Haven to hear a refreshingly different summary of modern instruction by Dr. Henri Peyre, Chairman of the Department of Romance Languages at Yale and President of the American Association of Teachers of French. Dr. Peyre reports that the current generation of college students are a challenge because their early training in the schools around the country has made them inquisitive, eager to learn, questioning of the 'pat' statement and in many

regards, ideal scholars. He believes that modern language instruction is destined to make our students and our people better understood throughout the world. He reports that language students at Yale are better prepared than their fathers a generation ago—and he calls for additional challenge and constant upgrading of material and difficulty, constant speed-up so that the capable student will have still more opportunity to learn.

Other speakers on the program included Don Iodice who discussed "The Fully Equipped Listen-Respond-Record Laboratory" and indicated that complete equipment was essential to successful foreign language instruction. Mr. Roderic Beaulieu (Conrad High School, West Hartford) described the seemingly endless activities which take place in the language laboratory of the high school and Mrs. Grace Crawford of the E. O. Smith High School at Storrs related her experiences in developing a modified language laboratory—literally from the first tape recorder up! Mrs. Crawford emphasized that the machine merely supplements the work of the imaginative teacher and that with a minimum of equipment a maximum of experiences can be offered.

She described her work in adding individual listening stations to a single tape record reproducer (headphones on a distribution system) and slowly expanding her application of this equipment in language instruction. Mrs. Crawford expressed the opinion that a multiplicity of equipment was not nearly as important as a good teacher (an opinion which we heartily endorse) and that a variety of equipment may make a good teacher even more effective if the personal touch is not overlooked. In any event, the teacher should not be the technician nor should the technician be permitted to dictate the path that studies should take.

Looking ahead, we are anticipating the release of a new series of poetry recordings by a large eastern university. We are told that sessions will be begun shortly to record contemporary poets reading their own works. The legacy of modern literature will not only be preserved for the future but will be available for the present.

Upper elementary school and junior high school social studies classes will profit, too, from planned releases. ENRICHMENT MATERIALS is hard at work on four new and exciting releases in the Documents of History series and four new adaptations of Landmark books.

Shakespeare will be with us, too, for at least another year. We are daily

waiting word of the release of new full-length (unabridged) recordings of "King Lear," "The Tempest," "A Midsummer Night's Dream," and "King Henry V." We heard recently that there is planning afoot to offer a course in SHAKESPEARE: PLAYS AND SONNETS without a textbook . . . but using recordings as the basis of instruction.

Such are the advance notices on what we expect next year, and this of course is only a beginning.

Kindergarten and primary grade children will enjoy and profit from hearing "ONCE UPON A TIME" (Audio Education LL-2; 55 Fifth Avenue, New York 3) which contains four

favorite children's stories. These are "The Three Little Pigs," "The Old Woman and Her Pig," "The Golden Goose," and "Tattercoats." These stories are delightfully, yet simply portrayed and each is accompanied by a special musical environment designed to heighten the listening experience. Each story is introduced by a simple yet appealing song which children can readily learn and repeat.

These stories are designed with a listening vocabulary range suitable to the intended audience and consequently may be used for pleasure listening, for word study in the language arts program, for inspiration for visual presentation, for dramatic recreation and for a variety of other purposes in the appropriate grades.

## Summertime... when your films are out of circulation

... is the best time for you to have us remove scratches, correct brittleness, repair sprocket holes, remake dried-out splices.

Then, thoroughly reconditioned, your prints will be ready for hard use again in the fall.

# FILMSTRIPS

by Irene F. Cypher

Without in the least wishing to seem facetious, may we ask you to consider for a moment or two that oft-quoted saying "There is no accounting for taste." The more you think about it, there is a lot of merit in those words for anyone who may be concerned with the selection of instructional materials for classroom use. It is because there are so many different individuals (each with very different ideas and tastes) in any one class that we ought to try and secure materials of all types in order to appeal to and stir the interest of these differing points of view. It has always seemed rather sad to us for a teacher to be afraid to use material which is not strictly "curriculum-coordinated"; it is also sad when a teacher says that she used certain material last year and does not wish to use it this year (Shades of something or other, this year's pupils are a new group — they may need to see this particular material! A remark such as this merely means the teacher herself does not want to see the material again); it is equally sad to select material solely for the reason that teachers think it is something the pupils *ought* to like (pupils are a captive audience and will have to look at the material, but this does not mean that they will like looking at it, nor does it necessarily mean that they will retain and remember as a result of just focusing their eyes on the screen).

All of which adds up to the fact that we are trying to make a plea for diversity of types of materials for any learning situation. Materials that simply glow with "pupil appeal"; materials that are academically packed with subject content; materials that present a subject from a slightly different point of view; materials that deal with just one phase of a topic as well as those that give an over-all general treatment. You can never tell when something you yourself did not find exactly the most appealing treatment will be the very one to ignite a perfect fire of enthusiasm in the mind of a boy or girl!

their natural habitat show us something of hawks, owls, the gnawing animals and many common birds. The photography is the work of an outstanding Canadian naturalist and is excellent! A supervisor of audiovisual materials for one of the Canadian provinces took me at my word when I said I wanted to begin securing pupil-reactions to the filmstrips reviewed here, and he sent me some of the comments from a class which had used this series. I particularly liked the following as indicative of what goes on in a pupil's mind when they see filmstrips: "I liked the films because I have always wanted to see what a bird's nest was like inside. And I liked to see the birds up close because whenever I see a bird I never know which is which. The bird's colors were very beautiful." "This filmstrip also showed the beauty of nature and the nests built by different birds. Birds also use camouflage. Some birds build nests so they are comfortable, others not so comfortable and some build no nests at all. The yellow warbler has a deep nest which is comfortable." (Evidently this pupil believes in comfort.) "One part of the film that I liked best was where one bird was held in a man's hand. That's where I really found out that birds are tame enough to be held." The prize reaction, to me, for using a filmstrip is revealed by the next pupil's remarks — "We would not have learned as much if someone had told us." (Isn't that reason for using visual materials!) The next remark to us is highly significant, in terms of what we said in our introduction: "In my way of thinking it was a nice film if you like birds but I am not so interested as to enjoy them. The only birds I like are mainly carnivorous. I would like to see birds in action, too."

As we have often said, the reason we use instructional materials is to rouse pupil interest. Evidently this set of filmstrips did just that, and we are happy to have been able to report this from a pupil-point of view.

up mental images of totally unknown places for they are names which refer to places on which our attention is often focused these days. All too few of us, however, have actually visited these places and filmstrips such as these help us to take such visits. We see fishing villages, farms, temples and homes as well as urban centers. We are given considerable information about the people and their daily activities and work. Three of the strips deal with Japanese life — work of farmers, fishermen and manufacturers; one strip deals with the rivers and ricelands of Thailand; one strip focuses on that bustling city Hong Kong. Concentration of interest is on the people, and the facts presented are interesting. This is good geography and good social history, too.

### Abraham Lincoln's Life Through Postage Stamps

(single strip, color and record; produced by H-R Productions, Inc., 17 East 45 St., New York 17, N.Y.; \$11 complete unit.) It is always good to report about something new and this unit intrigued us greatly! The story, of course, is that of the life of the Great Emancipator from the days of his youth through to the period of his political career, governmental activities and death. What makes this presentation unique is the fact that the story unfolds through the medium of postage stamps, all of which were made especially to honor and commemorate the man and his lifework. The accompanying record narrates the story in an entertaining way and in good tonal quality. Stamp collecting has always been a fascinating hobby for many and it is our guess that the technique of telling an entire story by means of stamps will have great pupil appeal. The stamps are well reproduced and all details are clear. It is a unit with many possibilities for classroom use.

### Basic Primary Science — Group I

(color, 6 strips; Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$24.30 per set, \$4.50 single strips.) Young scientists of grades one and two have just as great a need for information as do older class members. This series is especially prepared to meet their questions about plants, animals, people; what makes light penetrate through some substances and not through others; why some things float and others sink; what gives us light and heat and what

makes seasonal changes in temperature. The answers are here for the perennial questions, and the explanations are given in simple terms that will be easy to understand. The art work is clear and the set is good for age group needs.

### Modern Art — Henri Matisse, Part II

(single strip, color; produced by Life Filmstrips, 9 Rockefeller Plaza, New York 20, N.Y.) To understand an artist and his role in the world of art one must of course be familiar with his work. It is virtually impossible to find the works of any artist collected in any one place or museum. A filmstrip such as this can, therefore, serve to bring together examples of periods and styles, so that the viewer can gain some comprehension of the scope encompassed in the artist's lifetime. In this instance the artist is Henri Matisse, and we are shown many of his paintings; we also see some of his designs for the Vence Chapel and the murals he painted on tile. In each instance, close-up details are provided and the material is indeed a substitute for trips to many galleries.

### The Story of the Universe — Unit I

(color, 6 strips; produced by Films for Education, Audio-Lane, New Haven, Conn., \$36 per unit, \$7.50 per single strip.) Called an "Introduction to Modern Astronomy and the Age of Space," this series gives us a wealth of information about the earth, its size and shape and motion; the earth as a planet; exploring space around the earth; and the moon. Units still to be produced will deal with the solar system, the stars and the universe. A very able production staff has contributed to the making of the series and it is a truly valuable source of scientific data presented in a way calculated to appeal to the student. No one today can afford to be ignorant of the many basic facts presented here and the series is one of those really deserving the designation "resource material." The color quality and art work are excellent and the scientific data is authentic and carefully selected. The series was a blue ribbon winner in the recent film and filmstrip festival, and the award was justly earned. The strips are of course to be recommended for classroom work, but they should also be very good for astronomy clubs and for scout or special science interest clubs.

# keeps the teacher up front

— where she belongs!

DuKane's auditorium-size sound slidefilm projector is the answer to educational filmstrip viewing, for any size group from a small class to an auditorium-full. Remote push-button controls permit the teacher to stand up front for undivided class attention. Brilliant, powerful lighting gives a clear, sparkling picture with lots of reserve power for the biggest screen. The separately packaged sound unit provides high fidelity reproduction of both speech and music.

Only DuKane makes a full line of sound slidefilm projectors, featuring fully automatic picture advance where impulse is provided on the record, plus remote control or manual operation.

# AV IN THE CHURCH FIELD

by *William S. Hockman*

## Green Lake Workshop

These three words have become a symbol for interdenominational cooperation in the audiovisual field. They connote more—the international reach of the movement. In time they may come to mean depth and problem penetration. The theme for this year suggests this direction: "Improving Christian Communication."

The key-note address, "Communicating the Gospel to All the World," should give Rev. A. Dale Friers both the opportunity for scope and depth. For the morning assembly dialogues Dr. D. Campbell Wycoff of Princeton Theological Seminary and Rev. William F. Fore of the Methodist Board of Missions will discuss the implications of theology for visual communication and the implications of visual communication for theological speculation—we hope!

Fourteen laboratory sub-groups will take up specific problems related to the general theme. Seven of these are designed for persons having international and national interests and responsibilities. The subjects are: The Production of Audio-Visuals; The Distribution of Audio-Visuals; Curriculum Correlation of Audio-Visuals; Audio-Visual Aids in Evangelism Efforts; Audio-Visuals in Leadership Education; and, Audio-Visuals in the Church Overseas.

Seven other groups are designed for staff and volunteer personnel of sub-national and denominational units, plus leaders in state, county, local council of churches, and local churches. This set of 'workshops' will seek answers in these areas: Meeting Specific Needs with Self-Produced A-Vs; Setting Up and Maintaining an Effective A-V Library; Helping Local Churches Integrate A-Vs Into Curriculum and Program; Improving Evangelism Efforts with A-Vs; Improving Leadership Education with A-Vs; Improving Missionary Education with A-Vs; and, Designing a Comprehensive A-V Program for Our Constituencies.

All this in the morning, with the afternoons unstructured. This leaves opportunity for denominational meetings, for informal conversations, and private screenings of materials from the world's largest single library of new and current church-related films, filmstrips, recordings, and tapes. Let it

be hoped that each afternoon some group will carry forward constructive exploration in the area of standards for filmstrips, slides, and recordings.

The registration is waived for ministerial students and others pursuing religious education degrees in accredited institutions, and we doubt if any theologian could invest one week of his time to greater long-range benefit to himself and the church he serves than to come to Green Lake September 6-11, 1959.

## Notes on Films

If you measure the 11-minute Coronet film, *Are You Popular?* new version, by the producer's stated purpose, "To present teen-agers with a helpful guide to popularity and to motivate discussion of common social and personal problems," it would rate 'highly useful.' While showing a few things boys and girls should avoid, it keeps to the positive. We see an attractive couple doing the right things. Of course, the off-beat, vacuum-headed youth present in most groups will think some of this too 'square' for him, and, indeed, it will be for him. It will fit most young people to a T. The pity is that the parents of growing young people will not get to see it as often as they should. Imagine substituting a film like this for the 'Bible lesson' on a Sunday morning! Yet, here and there it will be shown to adults in the morning and to young people at fellowship meetings in the evening. Good and useful and highly recommended.

Two new titles for you to be thinking of as you set up your fall program are: *New Faces of Africa* and *None Goes His Way Alone*. We had hoped to be able to preview them in this issue. Now it will be September (this Department vacationing in August). The first is being produced by the Broadcasting and Film Commission of the NCC for the purpose of giving visual background to the overseas study theme for this coming year. It will vividly document the transition which is progressing so rapidly in Africa, and point-up the responsibility and opportunity of the church. The second deals with the rural church, once the center of life for many people, and what has happened to both

of them. It was produced by the Methodist Church (TRAFCO). A second film on the 'home' theme is *The Harvest*. It portrays the problems a rural minister faces in these times. All are 30 minutes, and the first two may be had in color. Book through your local rental library.

We will give you three guesses as to who wrote this: "You can't let other people think for you; you have to think for yourself. Otherwise, you might just as well be in prison."

Answer: A typical, mid-Western teenage girl whose story is told in the 28-minute, B&W, film available from the Anti-Defamation League (515 Madison Ave., N. Y. 22) and excellent for use in conferences, youth fellowships, and in youth-parent 'nights' and programs in and out of the church. Here is an excellent film to suggest to the clubs of your High school, and also to the service clubs of your community. Here is a portrait of integrity to inspire both youth and adults.

## Pictures Can Help

After getting off to a slow start, the 19-minute Eastman Kodak motion picture, *Pictures Teach At Penfield*, shows us how films and pupil-made snapshots

can be integrated into the program of education of a typical up-to-date school. Church leaders can learn from this film, and will learn if we will show it to them and talk out some of the implications. One weakness of the film is that we do not see more of the actual instructional process itself, but you can't put everything in one film and this does show nicely a number of important facets to the programming of pictures in education.

## From the Grass Roots

Some one in Mrs. J. R. P.'s denomination ought to ponder this one: She is ready to use visual materials but can't. Her minister is not convinced of their value, and the S.S. superintendent just won't let teachers waste their time with the "stuff." The AV materials nominated in the curriculum outlines won't get very far in that church. Is this a typical or atypical situation? It's bad either way!

Listen to this: "We got a movie machine. The school principal picked it out for us. He said it was the best. The trouble is that it is very heavy, and even our hefty High School boys can hardly carry it. The custodian has refused to. Now it's up to us

teachers. Are all machines that heavy, Mr. Hockman? What can we do? Well, I'd be pleased to have a 2-paragraph reply for her!

From a teacher of Junior Hi young people in a week-day school of religion: "Don't think I want any more Biblical filmstrips unless they are in art. We got weary in our bones of those photographs of actors in make-up and costumes. The first one or two were not so bad, but week after week they lack appeal. I'll take art from now on." This is something for the producers to ponder. There is sense in this observation if you can smelt this kind of ore. I know what he is talking about. Do you?

"My denomination suggests more AV materials from secular sources than it does from religious. What I mean is that so much of it is not in the AVR, and can't be gotten from the average rental library. When there are so many fine films and filmstrips, why do we need to send here and there for materials more related to public than to religious education?" I don't know. Do you? I suggest that Mrs. J. H. ask this question of top AV people in her denomination since they, no doubt, make these suggestions in the curriculum materials.

30 major denominations cooperate through the Broadcasting and Film Commission to bring you powerful, realistic motion pictures produced with professional skill and dramatic talent.

BFC Films are designed for churches to meet specific church needs.

BFC Films MAKE LASTING IMPRESSIONS

*A penetrating analysis of modern Africa specifically designed for the 1959-60 inter-denominational foreign mission study theme.*

## New Faces of Africa

Photographed in living color and with special music and sound effects recorded on location, this motion picture documents modern Africa's surge toward independence.

Representative Africans interpret their convictions in their own words and actions. A pastor speaks of building a self-reliant church. A village chief shows how he has changed old tribal patterns into a modern cooperative. Brilliant young political leaders speak of self-government. A physician points out that even independence cannot be a true freedom without a vital faith to live by.

# New Equipment and Materials

For addresses of the sources supplying information on which these listings are based, refer to Directory of Listed Sources, page 381. For more information about any of the equipment announced here, use the Readers' Service Coupon on page 380.

## NEW EQUIPMENT

### CAMERAS: Movie, TV

**Emel Plume Camera**, French-made 8mm professional turret type with key for double exposure, individual frame counter, parallax correction to 10", locking 3-lens turret, \$179.50, lenses extra. AKAREX.  
For more information circle 101 on coupon

**Reflex 16mm Cine Camera**. Pathe's WEBCO "M" permits sighting through the shooting lens without loss of brilliance even when the variable shutter is virtually closed, thus permitting exact framing without parallax and exact focus under all conditions. Viewfinder magnification 8x; shutter adjusts 180-0 degrees, footage and frame counter, 3-lens turret, forward and reverse drive; takes all C-mount lenses without expense of additional viewfinders. With 25mm F/1.5, \$495. Carrying case \$49.50. BGJ  
For more information circle 102 on coupon

### CAMERAS: Still

**Universal View and Portrait Camera**. Grover Monorail (4x5; 5x7; 8x10). Front and back swing, both vertical and horizontal; rising front and rear; compact but extra-long bellows; reversible back; folding focusing hood shades ground glass; large lensboard; rigid hexagonal monorail bed holds both front and back. BGJ.  
For more information circle 103 on coupon

### CAMERA ACCESSORIES

**Blimp for Maurer Camera** features external viewfinder and cam system for follow-focus parallax. 400-foot magazine; additional hood for 1200-foot available. CECO  
For more information circle 104 on coupon

**Professional Copying Lights** carry 8 regular 150-watt bulbs in mirrorreflectors; movable to give either front or transillumination; converter regulates voltage and color temperature; relay timer optional; draws 25 amp, 115-volt AC. \$299.50. BGJ  
For more information circle 105 on coupon

CEC Motor for Cine Special

**Stop-motion Motor for Cine Special**. Operates half-second exposure forward and reverse; equipped with frame counter; mounting requires no special tools; 110v AC synchronous operation. CEC  
For more information circle 106 on coupon

### PROJECTORS: Movie & TV

**Closed Circuit 16mm Projector**. RCA TP-400 is designed for use with vidicon cameras such as the TK-21, TK-201, TK-205 and TL-15, either by direct projection into the camera or via multiplexor three-way pickup. 1200w lamp; 2000 foot reels; 10-watt audio amplifier; remote and local control switches. Projector \$1,200; pedestal \$300; vernier focussed lens \$87; 16mm magnetic tape playback (optional) \$93.75. RCA.  
For more information circle 107 on coupon

### PROJECTORS: Still

**"Opa-Scope" 1,000 Watt** opaque projector generates over 140 lumens of reflected light. 18" color-corrected F/3.6 lens (5" diameter); 10"x10" platen moves smoothly 2"; dual fans, one to cool, the other to hold copy smooth without mounting. Auto-feed and Opti-Pointer are optional accessories. PROJECTION OPTICS.  
For more information circle 108 on coupon

### PROJECTION ACCESSORIES

**Aluminum Binder for 3 1/4 x 4" Slides**. Film and glass cover for emulsion side slip into one-piece aluminum binder. 50 frames and glasses \$10. EMDE.  
For more information circle 109 on coupon

**Anti-static Film Cleaner**. A new fast-drying formula contains no carbon tet or trichlorethylene but is said to out-clean either. Called "Ecco 1500 Extra with Filmex." ELECHEM.  
For more information circle 110 on coupon

**Butt Splicer**, Studio type, for both 16mm and 35mm film, all materials non-magnetic, splices made with Mylar tape. HPI.  
For more information circle 111 on coupon

**Lettering for transparencies**, self-adhesive transparent or opaque letters in 10 sizes and several colors greatly simplify lettering for transparencies or posters. OZALID.  
For more information circle 112 on coupon

**Ten Colors for Overhead Transparencies**. Projecto-foil sensitized films for diazo reproductions may be used alone or in combination to produce striking color effects. Where originals are in bound book form "Transferon" negative-transfer paper is exposed and then transferred to positive transparency sheets. A compact "Projector-Printer" kit is available. OZALID.  
For more information circle 113 on coupon

### SOUND EQUIPMENT & ACCESSORIES

**AM/FM Tuner** features an expanded slide-rule dial with separate logging scale to simplify precise selection of stations. Electric eye indicator shows optimum tuning point and functions as a relative signal strength meter. RF circuitry is heavily silver-plated to improve sensitivity and minimize cross-modulation caused by strong local stations. \$139.95. SCOTT.  
For more information circle 114 on coupon

**Audio Control Center/Preamplifier**. Ampex 402 offers two channels, independently push-button controlled inputs, separate loudness controls, separate individual controls for bass and treble response with maximum boost or cut or 16db. \$159.50. AMPEX  
For more information circle 115 on coupon

**"Calamity Jane" PA** — hand-held, 2 1/2 lb, pistol grip, trigger switch, all-metal, weather proof, sound claimed to carry a quarter mile; flashlight battery powered, \$59. ANTREX.  
For more information circle 116 on coupon

**Centralized sound system for schools** features a hi-fi AM/FM tuner, a 30-watt power amplifier, a Garrard 4-speed automatic record player, and a switch bank allowing operation in up to 25 classrooms. \$1,100. Larger units may be incorporated for schools with more than 25 rooms. BOGEN.  
For more information circle 117 on coupon

**Duplex Speaker.** Model 604D is being replaced by model 604A, with improvements announced in both bass and treble sections. 35 watts; 20-20,000 cps, resonant frequency 25 cps; 16-ohm; diameter 15 $\frac{3}{4}$ ", depth 10", wt 36 lb, mounting hole diameter 13 $\frac{1}{4}$ ". \$175. ALTEC.  
For more information circle 118 on coupon

**Flutter Meter.** Three-range filter isolates wow (.5 to 6 cycles), flutter (5 to 250 cycles); combined flutter and wow (.5 to 250 cycles). 7" meter with two 5 $\frac{1}{2}$ " scales. Also measures amplitude variations of any rate from 0 to 40 cycles. Standard rack panel, 8 $\frac{3}{4}$ " high, 19" x 8" deep, wt. 18 lb. ACA.  
For more information circle 119 on coupon

**Four Classroom Radio Receivers,** AM-FM with special emphasis on FM circuitry to eliminate "drifting," built-in AM antenna, line cord FM antenna, usable as remote speaker unit for dual-channel stereo or as extension speaker system. \$59.95 to \$129.95. ZENITH.  
For more information circle 120 on coupon

**"Mighty Mike"** voice amplifier, transistor-powered, rated 30-watts, operates on 8 flashlight batteries or 12-volt auto lighter connection, dual volume range, battery life on "low" approx 100 hours. HAMILTON.  
For more information circle 121 on coupon

Eight-lb. Tape Recorder

**Portable tape recorder,** battery operated, weighs 8 lb.; motor batteries last 40 hrs., amplifier batteries 175 hrs.; "TransFlyweight" incorporates a dynamically balanced flywheel, adjustable reed-type governor, segmented circuit design, high input dynamic range acceptance. ACA  
For more information circle 122 on coupon

**Recording tape splicer** offers choice of three cutting angles—90, 67 $\frac{1}{2}$ , 45 degrees. Side blades cut the splicing tape to the exact width of the spliced. Splicing tape is on continuous roll (No. 41 Scotch  $\frac{3}{4}$ " wide). \$29.95. ALONGE.  
For more information circle 123 on coupon

**"Redcap" portable PA.** Transistorized, packs as an 18" x 14" attache case, wt. 18 lb., powered by 2 flashlight batteries lasting up to 50 hrs., 8" speaker. \$249.50. ANTREX.  
For more information circle 124 on coupon

**Sound-slide synchronizer** adapts any tape recorder for operation of electrical remote control slide projector. Synchronizer spindle mounts in line with tape path but entirely clear of head; patches of metal-faced tape attached to shiny side, trip the mechanism. No. 425 Scotch Tape is suggested for the aluminum tabs. \$9.95. MESTON.  
For more information circle 125 on coupon

**Sound Surveillance System** designed primarily to protect schools against vandalism provides an audible signal at a central station whenever the noise level in a building exceeds the normal quiet level, plus a visual signal locating the site of this disturbance. BOGEN.  
For more information circle 126 on coupon

**Splicer for  $\frac{1}{4}$ " tape.** Mechanism ejects, applies, cuts off and presses the splicing tape into place. Hands never

touch the splicing tape. Wt. 2 lb., 4 $\frac{3}{4}$ " x 5 $\frac{1}{4}$ ". \$69.75. REITER.  
For more information circle 127 on coupon

**Stereo AM/FM Tuner.** Ampex 502 incorporates two independent matched radio tuners in single chassis, especially suitable for stereo recording off the air. Provisions have been made for FM multiplex stereo broadcast reception. Response: 20-2,000 FM; 20-8,500 A.M. \$249.50. AMPEX.  
For more information circle 128 on coupon

**"Tenna-Table."** Metal stand for TV receiver serves also as an adjustable inside antenna. The four legs are wired independently; controlled by a rotary switch the various combinations serve as a high-gain directional antenna. \$59 with antenna; \$49 without. TRANSVISION.  
For more information circle 129 on coupon

## First from PHILCO®...

## New All-Transistor TV Camera for Schools at only \$1445

Here's the camera that makes educational TV practical—dependable and trouble free... at a saving of hundreds of dollars.

A lightweight, maintenance-free, foolproof camera that anyone can operate. No matter how large the audience... now, everyone can participate in lectures, demonstrations, classroom sessions. Compare the quality of this newest Philco

TV camera with any other. To improve the quality of your audio-visual program... at dramatic savings... insist upon Philco TV.

Place your order now to assure early delivery. Write for Philco TV Planning Book, *Government & Industrial Division, 4702 Wissabickon Ave., Philadelphia 44, Pennsylvania.* In Canada: *Philco Corporation of Canada Limited, Don Mills, Ontario.*

# SYLVANIA CERAMIC BLUE TOP

PROJECTION LAMPS... for all makes... all types... in all sizes

Use a Sylvania Ceramic Blue Top in your projector... your slides and movies deserve the best!

New Sylvania Ceramic Blue Tops are available in all standard sizes for any projector... to fill your exact requirements for clear, brilliant projection.

**Blue Tops offer these superior qualities:**

**Brighter**... Ceramic Blue Tops won't scratch, chip or peel like ordinary painted tops... machine-made filaments assure pictures bright as life.

**Cooler**... Ceramic Blue Top is bonded to the glass for improved heat dissipation... cooler operation assures longer lamp life.

**Longer Lasting**... Exclusive Sylvania shock-absorber construction protects filaments from vibration damage.

Publicizing the end product of what's in the AV package.

## Viewlex Packages Plug Schools

All cartons in which Viewlex products are being shipped carry the official emblem of the National Citizens Council for Better Schools, the symbol of children at their desks and the slogan "Better Schools Build Better Communities." This carries a vital message to the hundreds of people who see the package on its way from maker to end user.

## Ling Expands

Ling Electronics, Inc., Culver City, have acquired the Altec Companies, manufacturers of speakers and other audio units. A new 45,000 sq. ft. plant, costing over \$500,000, is being erected at the Altec location in Anaheim, Calif. The Ling interests have also taken over University Loudspeakers, Inc., of White Plains, N. Y., for a reported consideration of \$2,300,000, of which \$1,650,000 was in cash. Both Altec and University will continue to function as wholly-owned subsidiaries.

## 4-Screen Ford Roadshow

The Ford Motor Company expects to show its unique four-screen movies in tent shows before a million people this year. The four screens, each 6'0 x 4'6, are flanked across one end of a 40-foot diameter fireproof tent. Various combinations of screens are activated so that filmed actors seem to talk back at one another even as the main picture is on. Two traveling units will present "Design for Suburban Living"; two others "Design for Rural Living." The quadri-division continuous automatic projection equipment was developed Busch Film and Equipment Co., of Saginaw, Mich. To get the four-way synchronization a special Moviola was used showing three films and two sound tracks simultaneously.

## Learning by Singing

Star Records offers a new series of hi-fi records featuring songs in original foreign-language text — and the same songs in English on the flip side.

## SMPTTE Features A-V Papers

The first two papers on the kick-off program at the 85th Semiannual Convention of the Society of Motion Picture and Television Engineers, at Miami Beach, May 3-8, featured A-V equipment of major interest to our readers. In the first, Richard A. Wallach described The Harwald Company's "Automatic Integrated Projection Training Device for Classroom or Auditorium Use," offering console-controlled projection of 16mm motion pictures, 2x2 slides, 35mm filmstrips, 3 1/4 x 4" slides, 10" x 10" overhead transparencies, in any desired combination, on a built-in 9' x 7' rear-projection screen, used under normal room lighting. George W. Reutell, of the Bell & Howell Co., described the development of the new JAN 16mm projector from the separate Army, Navy and Air Force projectors. John C. Stormant, a student at the University of Miami, reported on a 16mm film processing machine built at the university by students to handle all black-and-white and sound track processing at speeds of up to 100 frames per second.

Educational Television papers included such titles as "Closed-Circuit Television

in School and Community: The Chelsea Experiment," "Implications of the Conventional Classroom for Open-Circuit Television Teaching." "Professional Motion-Picture Training, Liberal Education and the Communication Arts Curriculum." C. Walter Stone, of the U. S. Office of Education, spoke in the implications of the National Defense Education Act. A paper on "A Comparison of Learning Resulting from Motion-Picture Projector and from Close-Circuit TV Presentations" described tests of the effectiveness of training films shown under varying (controlled) levels of projector noise, and established the projector as superior to the TV screen "provided low noise levels are maintained."

## NAVA Dance Party

The Saturday Night Dance Party, a regular feature of the NAVA convention July 25-28, will be held at the Morrison Hotel—and this year for the first time the \$3 general registration fee will include admission to the dance. The Sunday morning audiovisual church service will be in charge of a committee headed by clergymen who are NAVA members.

Find A New Use For

# SLIDE-O-FILM

THE NEW "WONDER FILM" THAT REQUIRES NO CHEMICALS OR DARKROOM...

**YOUR AWARD...**

**SABENA "JET 'N 'COPTER"**

**HOLIDAY ABROAD**

**FOR TWO!**

## Beseler Slide-O-Film Uses-In-Industry Award

**Just add your idea** — it may come "right off the top of your head" — to the fast-growing list of uses for new Beseler-Kalvar Slide-O-Film in your industry!

If your idea produces the Award-Winning Use—YOU'RE OFF TO BRUSSELS AND EUROPE BY NEW SABENA JET, AND TO THE "HEART OF PARIS" BY HELICOPTER... ON A ONCE-IN-A-LIFETIME SABENA "JET 'N 'COPTER" HOLIDAY ABROAD FOR TWO!

SLIDE-O-FILM, a completely new *physical* system of photography, is a film that's *exposed by light and developed by heat* for making *projection positives* from negatives or sharp, grainless *negatives* from color or positive transparencies in *just 2 minutes!*

SLIDE-O-FILM works without chemicals, darkroom or special equipment. Placed, emulsion to emulsion, against a positive transparency or negative, SLIDE-O-FILM is exposed in an ordinary projector, subjected to any heat source for development... and the process is completed.

New uses for SLIDE-O-FILM are developed daily with amazing savings in time and money for business and industry. Already SLIDE-O-FILM is used for new, fast methods of making Audio-Visual Training and Sales presentation slides from black and white negatives; slides for continuous interdepartmental communication; rapid reproduction of medical or industrial x-rays and microfilmed files, records or charts; negatives for printing low cost "blow-ups" from color slides or Polaroid® transparencies.

**To find out how you can easily win the exciting Sabena "Jet 'N 'Copter" Holiday Abroad for Two:**

Pick up an "Award" application when you buy SLIDE-O-FILM from your dealer or send coupon for full details and Sample Kit that contains all materials you need to win.

### CHARLES BESELER COMPANY

\$349.50

## MM SUPREME

No other projector has so many exclusive features designed to make the teacher's job pleasantly simple—vastly more effective. MM Supreme is a precision-made audio-visual unit that sets up in minutes, without fuss or bother. Its high-power optical system concentrates its light (with minimum side-loss) on the screen so that even the smallest picture detail stands out crisply and clearly. Its compact audio system guarantees full-range, high-fidelity sound. And, because MM Supreme is so skillfully designed and built, there is never any distracting operating noise. Students concentrate better . . . learn more.

MM Supreme's new Easy-Thread film path diagram makes setting up as quick and easy as a tracing. And, its many other features make it the most desirable 16 mm sound projector for educational, industrial and entertainment use.

For example, MM Supreme has special safety trips that protect film against incorrect threading, torn sprocket holes and other emergencies. It has 2000 ft. film capacity—a full hour's uninterrupted use. It is complete with TV type screen, 800 ft. take-up reel, enclosed speaker with extension cord, built-in box for spare lamp.

Best of all, MM Supreme is so compact and light in weight it is the most perfectly portable projector in the market. Weighs only 28 lbs. complete.

## NEW! PERFECT WAY TO SHOW SOUND MOVIES

Ultramatic has everything ready—projector all set up, sound with extension speaker, storage space, even carries screen! All in handsome roll-about cabinet with secure locks to keep equipment and film safe from mischievous hands. Only \$595.00 complete.

THE **HARWALD COMPANY, INC.**  
1245 Chicago Avenue Evanston, Illinois

# ON THE SCREEN

HERE comes the thirty-fourth edition of the Blue Book of Audiovisual Materials! Once again we have collected the basic data on all the new materials, classified in thirty-two categories, that have been published since September, 1958. In addition, there are over four hundred new items, to give schools, audio-visual directors and teachers the most comprehensive listing possible.

Under each classification all kinds of materials are listed, making possible—even encouraging—the “cross-media” approach to learning. For example, among the social studies listings the reader will find motion pictures, filmstrips, sound filmstrips, maps, globes, records, tapes, study prints, slides, and the classification by subject matter rather than by medium should make it possible for curriculum specialists to broaden their scopes by trying new and exciting things.

Keep this Blue Book handy for repeated reference throughout the year! You may wish to order additional copies for other departments or personnel in your school. And if you have any suggestions for improving this service we offer you, the staff will be glad to receive them. — ES

SEPTEMBER'S on its way, and our “Back-to-School” issue will be packed with information which we feel will interest our readers—such as another “architectural solution,” and criteria for evaluating equipment before purchase. All our popular departments will be back with us, too.

## AV Service — With a Smile?

A Program—any assignment that can't be completed by one telephone call.

To Expedite—to confound confusion with commotion.

Channels—the trail left by the inter-office memos.

Coordinator—the guy who has a desk between two expeditors.

To Activate—to make carbons and add more names to the memo.

To Implement Program—hire more people and expand the office.

Under Consideration—never heard of it.

Under Active Consideration—we're looking in the files for it.

A Committee Meeting—a mass mulling by master-minds.

A Conference—a place where conversation is substituted for the dreariness of labor and the loneliness of thought.

To Negotiate—to seek a meeting of minds without the knocking together of heads.

Re-Orientation—getting used to working again.

Reliable Source—the guy who just gave you the low down but told you not to tell.

Informed Source—the guy who told the guy you just met.

Unimpeachable Source—the guy who started the rumor originally.

A Clarification—to fill in the background with so many details that the foreground goes underground.

We Are Making a Survey—we need more time to think of a good answer.

Note and Initial—let's spread the responsibility for this.

See Me or Let's Discuss—come down to my office, I'm lonesome.

Give Us the Benefit of Your Present Thinking—we'll listen to what you have to say as long as it doesn't interfere with what we've already decided to do.

Will Advise You in Due Course—if we figure it out, we'll let you know.

To Give Someone the Big Picture—a long, confused, inaccurate statement to a newcomer.

Spearhead the Issue—you be the goat.

Point Up the Issue—to expand one page to fifteen pages.

The Issue Is Closed—I'm tired of the whole affair.

It Will Take a Week to Ten Days—Better order a couple of months in advance.

(Continued on page 393)

# MORE SCHOOLS USE **iewlex** IN THEIR A-V PROGRAM THAN ANY OTHER PROJECTOR!

## **First in Choice... First in Quality!** **THE VIEWLEX V-500** **COMBINATION 35 mm FILMSTRIP** **& 2" x 2" SLIDE PROJECTOR**

### **Here's Why —**

**Simple Threading** — simply slide film between clearly marked plates into projector channel and it threads itself — then take-up reel winds it neatly — automatically! Project single or double frame filmstrip — horizontal or vertical. Or in just seconds, switch easily over to slides.

**Brighter Pictures** — even in lighted rooms... the 500 watt lamp in the exclusive Viewlex light-multiplier optical system gives more light than projectors of higher wattage. And the completely light-tight lamphouse eliminates any distracting light leakage.

**Always Cool** — even after long periods of use... an exclusive Viewlex reverse jet-action suction fan draws cool air in and around the film *first* — then circulates it quickly throughout the projector and forces it out the side vents.

**Built-In Magnifier Pointer** — more than just a pointer — actually enlarges any part of projected filmstrip image to fix attention on details under discussion.

**Comes complete with 5" f/3.5 Luxtar lens and slip-on aircraft carrying case • 3", 4", 7", 9" and 11" lenses available • For even greater brilliance the V-500 is also available with 5" f/2.8 Luxtar lens.**

Other Viewlex projectors available from \$50.25 to \$495.00. Ask your Viewlex Audio-Visual franchised dealer for a demonstration, or write for catalog.

 **iewlex** INC.

35-10 QUEENS BOULEVARD, LONG ISLAND CITY 1, N. Y.

All Viewlex projectors are GUARANTEED FOR A LIFETIME.

# Looking for Something New?

HERE IS YOUR **KEY** TO THE  
AUDIO-VISUAL RELEASES OF 1958-1959

## The **BLUE BOOK** of Audio-Visual Materials

● films

the **ONLY** source-book that completely correlates  
all four principal types of instructional materials

● filmstrips

● slides

● recordings

**Costs Only \$1.00**

Not only does the BLUE BOOK tell you where to get 16mm films; it also tells you *where to get 35mm filmstrips, slide sets, and educational recordings.*

The new BLUE BOOK lists all these major types of teaching aids under the same subject heads. The listings include: title, type of material, length, silent or sound, color or black and white, television clearance, sale and/or rental price, primary source of distribution, release date, content description, and recommended age level.

The BLUE BOOK lists materials on virtually all subjects — agriculture, armed forces, arts and crafts, cinema arts, education, entertainment features in many languages, personal and vocational guidance, health and safety, home economics, industry, transportation, industrial arts, languages and language arts, literature and drama, mental health, mathematics, science (physical, biological, general, medical and allied), physical education and sports, social studies (geography,

history, anthropology, government, social problems) and many more. No matter what your field of interest, the help you're looking for is in the BLUE BOOK.

For more than 30 years the BLUE BOOK has been the desk-top reference and work-book of leading audio-visual education administrators. Its first 28 editions, revised annually, were cumulative, those following list only the new releases of their year. This year, again, the Blue Book issue lists, classifies and indexes the new offerings released during the past academic year. Every subscriber gets the BLUE BOOK — and a great many extra copies are sold for all-year reference use in film and other libraries. A-V administration offices, research and production centers, in short — everywhere that accurate release data is needed quickly, handily, constantly! *This makes the annual BLUE BOOK issue a doubly useful one for our subscribers — and, consequently, for our ADVERTISERS.*

### An Ideal Combination

To keep your BLUE BOOK up-to-date, each monthly issue of EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE now carries a special section of listings of new audio-visual materials presented in the same helpful format as in the BLUE BOOK. A year's subscription to the magazine costs \$4.00; the annual BLUE BOOK issue costs \$1 each; and the 28th (separate cumulative book) edition that makes your file complete is priced at \$2.00.

**Fill Out  
and Mail  
this Coupon!**

**Take advantage of this  
combination offer**

## With the Authors

MARJORIE A. CLARK has been an active freelance writer, reporter and journalist. Three years ago she joined Moody Institute of science, where she has worked on filmstrips, films and in research.

E. MILTON GRASSELL, who presents the chalkboard advice on pages 400-401, is School Specialist with the Oregon State System of Higher Education. He has contributed to this magazine in the past, most recently in November, 1958.

## AV Service . . .

*(Continued from page 391)*

For the Good of the Order? — anybody having anything else to kill time till the sandwiches arrive?

Film Hasn't Arrived Yet — sorry, we forgot to order it.

Sorry the Projectionist Showed Up Late — we didn't give him a job slip till he walked in the office.

Sorry They're the Wrong Films — why don't you write clearer?

We Close at 5:00 — We're in till midnight.

We Offer a Consultation Service — our way is best.

The Projectionist Is on His Way Over — we'll see if we can find someone.

Let's Check Films — at the busiest moment of the day, drop everything for a little work break.

There's a Spare Bulb in Every Projector — well, almost every projector — someone must have used it already.

All Equipment Is Numbered and Accurate Records Kept — we never did find that tape recorder, did we?

We Finally Sent in That New Budget — we'd all better look for new jobs.

Is This the Place Where You Rent Films? — we have a guest speaker in fifteen minutes who didn't show up. What have you got?

Consultant (Audiovisual Expert) — any ordinary guy more than 50 miles from home.

*For grades 5, 6, 7, and 8 . . . .*

# SCIENCE FILMSTRIPS IN FULL COLOR

**A set of 12 filmstrips with Teacher's Guide  
for each grade**

**T**HE newest developments and applications are explored, and exciting approaches and materials for experimentation are suggested.

The following strips, prepared by Harry Milgrom for Grades 5 and 6, indicate the wide coverage of science topics:

## THE WONDERWORLD OF SCIENCE

### Grade 5

Soil for Plants  
Nongreen Plants  
Keeping Correct Time  
Exploring the Rocks Around Us  
Exploring Matter  
Air, Our Ever-Present Servant  
Why Winds Blow  
Why an Airplane Flies  
How Did Our Solar System Begin?  
Natural and Man-Made Moons  
What Will Hatch from That Egg?  
Mineral Riches of America

## THE WONDERWORLD OF SCIENCE

### Grade 6

New and Old Ways of Preserving Food  
Let's Build a Weather Station  
Exploring Storms  
Exploring Magnetism  
Electromagnetism at Work  
Producing Electricity  
Electricity at Home  
Making Music with Wind and String  
Exploring the Sky  
Sunset and Eclipse  
The Doctor Examines You  
Weapons Against Disease

*Have you seen . . .*

## CAREERS IN SCIENCE

### Grade Level 7-9

Four full-color filmstrips, with Teacher's Guide, prepared to help the schools guide more students into science careers:

Looking Ahead to Mathematics  
Looking Ahead to Physics  
Looking Ahead to Chemistry  
Looking Ahead to Biology

*All sets are available for preview*

**CHARLES SCRIBNERS' SONS**

EDUCATIONAL DEPARTMENT

597 Fifth Ave., N. Y. 17, N. Y.

*Editor's Note: These definitions were collected by graduate assistants at Syracuse University to enliven an otherwise dull (i.e. serious) meeting.*

# Three R's Out of Four

The three R's we're thinking about right now are *not* the traditional readin' 'ritin' and 'rith-metic R's. What we are thinking about in connection with this special BLUE BOOK issue of "Educational Screen and AUDIOVISUAL Guide" are three of the "4 R's" that are the central objective of every good school audiovisual program.

We remember vividly all four of the "R's" as they were set down in that handy little Principals' Handbook<sup>1</sup> that came out of California ten years ago:

Question 3: What are the "4 R's" of your school's Audio-Visual Education Program?

Answer: The "4 R's" of your school's Audio-Visual Education Program are . . . to make sure that the:

Right materials and equipment get to the  
Right place at the  
Right time, and see that they are used in the  
Right way!

That's as terse and memorable a way as we know for stating the goals of an audiovisual program. To achieve such clear-cut goals is another thing, and it takes a lot of doing. It's becoming more difficult all the time. For one thing, there are more materials now than ever before, more kinds, and more of each kind. So if you are going to get the right materials to the right place at the right time, first you've got to know what's available and where to get it. That's what the BLUE BOOK's for, to help you do just that.

Today, guiding the selection of the right materials for specific classroom uses is one of the most important functions of the audiovisual administrator. Carlton Erickson, in his excellent new text, "Administering Audio-Visual Services,"<sup>2</sup> identifies clearly two levels of materials selection. The first is at the classroom teaching level: the materials the teacher selects to meet specific teaching objectives. The second level is selection for system-wide distribution: the materials selected by the system for use by teachers. "The only valid reason for selection at the second level is to facilitate selection at the first."

The BLUE BOOK serves both levels of materials selection, but at the second level, for the selection of materials for system-wide distribution, it is an indispensable guide for the audiovisual administrator. His is the demanding responsibility for making sure that the right materials are available for the teachers of his system. He must know about *all* the materials produced, and his information must be up-to-date. He must know where to get them, and his information must be accurate. The BLUE BOOK is for him. It is a summary list of the audiovisual materials produced during the past year, and tells you who produced them.

Now, assuming you have already worked out your evaluative procedures, all you've got to do is to write the producers for preview copies. But we urge you to be fair about it. Ask for pre-

view copies only when you have funds available and when you are seriously involved with the selection of materials for purchase. Then buy those materials that will best serve the teaching needs of the teachers you serve. Then you'll have the right materials in the right place at the right time . . . but wait!

Come to think of it, there's a first and second level to the "4 R's" of your audiovisual program. The first level of the "4 R's" is at the classroom teaching level: the right materials must be in the classroom at the time the teacher wants to use them. But this can only happen if the "4 R's" have been achieved at the second level, the system-wide administrative level: if the right materials have been selected and purchased from the producers; they must be in a right place — a central distribution point from where they are

readily available for all teachers to use; and the right time to acquire these materials is as soon after they're produced as possible. The BLUE BOOK is the indispensable guide for implanting three R's out of four.

But what about the fourth R? The fourth is the one that warns that the materials must be used in the RIGHT WAY. Well . . . that's what the other issues of "Educational Screen and AUDIOVISUAL Guide" are all about!

# Visualizing Difficult Subjects

Time lapse photography helps demonstrate plant growth and the unfolding of a blossom.

*by Marjorie A. Clark*

**H**OW far is it to the nearest star? How does a bat see where it is going? Does a humming bird fly backwards? How do crystals form?

The preparation of films and filmstrips for teaching science posed many problems for us here at the Moody Institute of Science. Often pictures, charts and diagrams fail to get across

What happens when a metal ball is dropped into liquid? The high-speed camera tells the story.

Special high-speed camera "slows down" action.

certain concepts, and we had to find other methods for visualizing difficult subjects.

It seemed simple enough to send photographers to take pictures of plant growth. But plants grew slowly and it took too long to get the whole story. To explain such terms as tropism, turgor, photosynthesis, we had to show the actual working of the plant. We found the answer in time lapse photography. Now the student can see the root break through the seed and force its way through the ground, and then the development of the branch roots. Pictures of special experiments with wet and dry areas reveal the root's search for water. From above ground the student watches the thrust of the shoot breaking through the earth, the swaying rhythm of plant growth and the beauty of the unfurling petal. Telescoped into a few moments is the whole story of a growing plant.

To explain the process of photosynthesis, both camera and microscope were used, and as the student sees the movement of the chloroplasts in the plant cell he has a better understanding of plant life at work.

In contrast, other things could be better illustrated when the action was slowed down. We used a special high speed camera which takes up to 3000 frames per second (125 times normal speed to show what happens when an object falls into a liquid, or when an egg is suddenly shattered. In slow motion it is quite evident that a humming bird really does fly backwards!

Whether we slow down the action, or compress three days into a brief eighteen seconds, we are opening the door into the world of relativity,

and helping the student to gain new perspectives in the relationships between time, distance, and matter.

Traveling just under the speed of light, it would take eighteen years to make a round trip to the world's nearest star and back, yet the person making the trip would age only one day because his body functions would be slowed. How could we visualize a subject of this kind? A camera with a variable aspect ratio lens — like those which spread out the cinemascope picture to wide screen — solved the problem. It gave the same effect as if the room were accelerated to amazing speeds. In this way the student is given some idea of the mystery of time, and just how long the light that twinkles from a distant star has been traveling on its earthward journey.

A school may have a collection of minerals, and students may have seen glittering crystals displayed on backgrounds of deep-toned velvet. But to identify crystals with their role in the formation of the earth's crust, we became amateur speleologists, exploring caves and photographing the results of crystal formations in limestone deposits.

In the laboratory, photomicrography was used to show the actual formation of certain crystals. Now as the student watches a grain of salt dissolve and re-crystallize he learns that minerals follow their set patterns of angular precision. To show beauty in nature, a polarizing microscope was used to reveal various crystalline patterns in all the colors of the rainbow.

Everybody knows that bats fly by night without bumping into things, but we wanted to demon-

(Above Left) Special equipment is built to aid in filming heart action. (Above right) Scientists say that moving objects shorten in the direction of travel. These effects were obtained by a camera with a variable aspect lens. (Right) Demonstrations and special photographic effects show what would happen if a man were traveling at 167,000 miles per second.

strate their way-finding ability and find out their secret of night flight. That meant more cave explorations to obtain bats for laboratory experiments. An obstacle course was set up, and we photographed the bats as they winged their way between bars without even touching them. Then we blindfolded the bats. They flew through the bars again. But when we tied their mouths shut, they bumped into the sides of the course. A special microphone and amplifier revealed the fact that bats made high-pitched sounds as they flew, which echoed back from nearby objects, thus guiding the bats in flight. Here was the principle of sonar demonstrated in a way which could be easily understood, even if it proved disconcerting to realize that bats had been putting into nightly practice for centuries a method of way-finding men only recently discovered.

Other animals have been brought to the laboratory to find out and then to illustrate for science classes just how they function, among them the electric eel and the sloth which, even in a laboratory, prefers to hang upside down.

We found that the structure and function of our bodies was not always easy to explain or

illustrate. Comparison to a camera, for example, helped when dealing with the human eye, but for the most part man-made machines only served to demonstrate the superiority and complexity of the human machine.

Without doubt the most difficult subject to visualize was the valve action of the human heart, and yet it was a vital part of the story of the blood stream. The result has appeared in newspapers and scientific journals across the country. Scientist and heart specialist worked together to build a pump that would make a dead human heart pump water in the same way that blood flows through a living heart. Then, through specially designed "windows," cameras recorded the operation of the aortic and mitral valves from outside and from within the heart. One of the results of this has been the appearance of "heart machines" in science fairs all across the country!

With today's advances we are constantly faced with new problems in visualization, but writers, scientists, artists and photographers work together to make science exciting and understandable for the students in our schools.

Kodak  
TRADE MARK

At the new Cornwall (N. Y.) Central High School, selected by A.A.S.A. for its exhibit of outstanding school designs, Thomas D. Shast, Supervising Principal, says:

**“In equipment—as in building—today’s investment has to pay off in the future. That’s one reason we picked Kodak Pageant Projectors”**

“When we were planning our new school, we asked two questions about every item that we had to purchase: How long will it last? How much maintenance will it need? This concern with *value over the long run* led us, for instance, to select terrazzo for our corridors. And the *same* thinking influenced our choice of Kodak Pageant Projectors.”

Learn, yourself, why Kodak Pageant Sound Projectors offer years of low-cost, trouble-free use. The Kodak Pageant Sound Projector *never* needs oiling, cannot suffer damage from improper lubrication. Let any Kodak AV Dealer give you the complete Pageant story. Or write today for Bulletin V3-22 . . . yours for the asking without obligation.

*Kodak Pageant Projector* > **EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

(1) Here is one of the oldest and most effective visual aids—the time-honored chalkboard. But sometimes even in top quality boards, things go wrong.

# Chalkboards in Action

by E. Milton Grassell

**D**o chalkboard problems come up in your work? They certainly do in mine! For instance, questions like these continually pop up:

Will colored chalk erase?

What causes white ghost marks?

Why do boards get hard to write on and difficult to erase?

How can chalkboards be used more effectively?

If answers to specific questions like these will help you help teachers use chalk and chalkboards more effectively, you will be interested in the accompanying pictures and captions that answer these questions and several more. These pictures pinpoint the following chalkboard items:

1. Oil is life to bearings, but death to chalkboards!

2. White ghost marks are caused by "second" and "third" grade chalks.

3. Chalk for colored paper is impossible to erase, but can be removed, and

4. Good grade colored and "white" chalks erase readily and completely.

In addition, the accompanying pictures illustrate some good chalkboard work in action. These illustrations support the following statement made by a famous educator:

"Indeed, in no state or country have I ever seen a good school without a blackboard or a successful teacher who did not use it frequently."

Yes, decades ago Horace Mann said that about an important teaching aid that is now called the chalkboard. His statement is still true today!

(2) Oil on the surface makes writing hard and erasing difficult; inferior grade "white" chalks leave ghost marks and chalk made for paper cannot be erased.

(3) Yet all these problems can be solved by using an abrasive on a damp cloth. Contrary to popular belief, neither the abrasive nor the water will harm any good grade chalkboard, providing it is thoroughly rinsed after washing. Through a microscope, the chalkboard surface shows up a series of "hills" and "valleys." Unless the board is rinsed, the glue that binds the chalk particles together fills the "valleys." This produces a glary surface and one that is difficult to write on.

After rinsing, allow the board to dry (overnight or longer) and then break it in by rubbing good grade chalk over the surface.

4) Work this dust into the board by vigorously rubbing the surface with a cloth or a felt-ribbed eraser. Allow a thin film on the board at all times or writing and erasing ease. (Top grade chalk on high quality boards will leave ghost marks unless the boards are chalked in.)

5) The best cleaning procedure is to use felt-ribbed erasers, separate chamois, or chamois-backed erasers. Wipe the chamois-backed eraser after every stroke or two on a clean cloth for best results.

6) Color adds emphasis, but be sure to use only top quality colored chalk made specifically for chalkboards. This will erase!

(8) Permanent outlines of the human body, regions, football fields, etc., can be made easily on auxiliary chalkboards with felt-nib pens. Use an opaque or filmstrip projector to enlarge and transfer the designs to the board. Write on the outlined surface with good grade chalk. When you erase, the permanent outline remains, readily available for many visual illustrations.

(9) Third grade chalk (right) is easily recognized; it is tapered and marked with air holes. It also contains hard spots that scratch the chalkboard surface, causing permanent damage. Second grade chalk contains about fifty percent clay, and leaves "ghost" marks. Top grade chalk contains ninety-five percent or more pure English precipitated white. It writes and erases easily. These pictures are taken from a film, "Chalk and Chalkboards," recently released by Bailey Films, Inc.

(7) Templates insure accuracy and save time when making certain outlines that are often repeated. A simple handle makes them easier to use. They may be made of heavy paper, plywood or hard-board.

# Blue Book of AV Materials

The producer or primary distributor of each item is indicated by name or coding appearing in CAPS following the title and classification of material. You should contact such sources for purchase or rental, or any additional information desired. Addresses will be found in the Directory of Listed Sources at the end of this BLUE BOOK.

tle actions involving the 10th and 24th Corps, Sixth Army, and the 3rd and 7th Fleets. JH-A.

**The Big Picture** mp UWF 29min sd b&w \$56.21. U. S. Dept. of the Army film of major battles of World War II and their sites today. JH-A

**Share a Proud Tradition** mp UWF 15min sd b&w \$29.79. The U. S. Marine Corps as a career opportunity for young women. SH

## ARTS, CRAFTS, CINEMA ARTS

**Artists of Holland** 2fs EBF si col \$12; ea \$6. Two strips each approx. 44 fr. **Vincent van Gogh** and **Rembrandt**. Each work is preceded by text material including the name of the painting and the year it was painted. Fibro Color. SH C A

**Building Children's Personalities with Creative Dancing** mp UC 30min sd col \$275 b&w \$135; r \$7.50-\$5. The range and quality of expression children can find in creative movement to music. TT.

**Creativity** mp USDA 11min sd col. Prismatic color patterns and nature scenes from our national parks and volcanic areas focus attention on narrative that goes from Genesis to Shakespeare in weaving the film makers' presentation of man's capacity to conceive, imagine and create. Workshop film employing a wide variety of techniques (e.g. delayed title, stills, stock footage, etc.).

Art, music, cinema, science, social studies. SH C A

**A Dancer's World** mp REMBRANDT 3 min sd b&w \$175 r \$17.50. Martha Graham and her company in special choreographed basic techniques and excerpts from repertoire. SH C TT

**Dance Your Own Way** mp UCLA 10 min sd col \$110 R \$3.50. Film designed to be shown to children by teachers in developing spontaneous expression in dance rhythms. K-P TT

**Fall** mp GENERAL FILMS 9min sd col. An imaginative documentary tracing the moods of a single day in autumn.

**Famous Art Masterpieces in Sculpture** COLSLI col 38c-50c depending on quantity. Several hundred slides listed in free 16pp catalog. SH-C-A

**Fifty Years of Modern Art** slides IVA col set 227 slides \$68.10 in cardboard mounts; \$90.80 in aluminum. Partisets also. Photographed at Brussels Fair 1958 and later modern art show.

**Fifty Years of Modern Sculpture** sl IVA col set (71 slides) \$21.30 cardboard \$28.40 aluminum. Photographed at the Brussels Worlds Fair 1958 and other European exhibitions.

**The Hunters** mp CONTEMPORARY 6 min sd col \$400 r \$40; b&w \$275 \$25. Winner of the 1958 Flaherty Award, produced by Film Study Center of the Peabody Museum. African hunters' quest for food, in sensitive photography and narration, plus an occasional background chant, provides

exceptional camera-study of primitive culture. SH C A

**Ink and Rice Paper** mp CONTEMPORARY 15min sd col \$175 r\$15. Lowell Naeve explains the specific techniques involved in woodblock printing; the artist's work is shown in detail. HC C A

**Making Wood Sculpture With Files** mp COX 13min sd col \$135. A boy learns from a sculptor how to shape a horse from a block of wood, by filing. el jh A

**Masters of Modern Art** (additions) 2fs LIFE si col ea \$6. **The Art of Van Gogh. The Art of Matisse — Part I.** SH C

**Murder on the Screen** mp KODAK 22min sd col free. "Murder" mystery treatment of a case of damaged motion picture film. Projectionist, TV station, distributor, lab technician each insists he could not have been the guilty one. Shows the contribution each makes toward the picture on the screen. JH-A

**Museum of Art** mp UWF 27min. sd col \$145.39 (less 10% to schools and other nonprofit organizations). USIA film now made available for domestic use. Major museums shown include the National Gallery, Philadelphia Museum, Museum of Modern Art (NY), Chicago's Art Institute, and Boston's Museum of Fine Arts—but also smaller institutions in cities like Montclair, N. J. and Hagerstown, Md. Many priceless masterpieces shown in excellent color photography. JH-A

**The New Age of Architecture** mp ARCHITECTS 42min b&w free. Impact of architecture on society is developed in interviews with 16 of the nation's leading architects and engineers, including Frank Lloyd Wright, Miles L. Colean, Victor Gruen, Buckminster Fuller. Henry R. Luce outlines the challenge to create "the first modern, technological, humane, prosperous and reverent civilization." HS C A

**Print With a Brayer** mp BAILEY 8min sd col \$75. Creative use of impress techniques and examples of many types of results obtained. JH-A

**Rembrandt: Painter of Men.** mp CORONET sd col \$192.50 b&w \$105. Honoring the 350th anniversary of Rembrandt's birth, this film, commissioned by the Netherlands government, draws upon more than 60 original paintings, the largest collection ever assembled. Films tell story also of the life of the painter. SH C

**A Sculptor Carves a Giant** mp COX 16min sd col \$150. Sculptor Carroll Barnes carves wooden figure with aid of group of college students. SH C A

**Silhouette Fairy Tales** (additions) mp CONTEMPORARY 10min sd b&w ea \$50 r\$3. For more titles in the Lotte Reiniger fairy tale series: **The Magic Horse; Grasshopper and Ant; Snow White and Rose Red; Frog Prince; The Three Wishes.** Earlier series included six children's tales and three adult stories: **Pagageno, Carmen and Galathea.**

**U.P.A. Cartoons** (series) mp CONTEMPORARY 10min sd col r\$5. Eleven whimsical, sophisticated exploits of Mister Magoo; McBoing, Patsy, Madeline and their pals.

## BUSINESS EDUCATION

**Duties of a Secretary** sfs UNDERWOOD 22min 140fr sd (LP) col \$5. Right and wrong way for secretary to exercise initiative, organize work, practice good human relations. HS

**Effective Salesmanship** 5 mp ICR ea 15min @ \$135. (Preview service charge \$10 ea.). 1: **How to Keep Your Customers Yours.** 2: **How to Handle Price Resistance.** 3: **How to Plug Time Leaks.** 4: **How to Package Your Personality for Greater Pull Power.** 5: **How to Help Your Customer Overcome Decision Fear.** A C.

**The Engineering of an Agreement** mp ROUNDTABLE 22min sd col \$240 b&w \$140. A salesman tries hard—too hard—until he is shown how to look at himself from the other man's side. Film closes with 10 dramatized situations of customer reaction, each stopped for discussion of "What would you say?" in applying the principles of winning agreement as brought out in the first part. TT A

**How To Multiply Yourself** sfs ABP 80fr LP loan to company sales meetings, advertising and sales clubs. The role of business paper advertising in multiplying impacts, preparing ground for sales calls, developing new prospects. Amusing art, solid logical narration. A

**How to Take the Guesswork Out of Your Hiring** 12 sfs ICR sd col \$395. Dr. Robert N. McMurry narrates the series. Titles include: **The Stakes Are High; Screening Out the Unqualified; Sensible Psychological Testing; Checking with Others; The Patterned Interview; How to Conduct the Patterned Interview; Basic Character Traits; Motivation I & II; Emotional Maturity I & II; Making the Final Rating.** A.

**Imagination at Work** mp ROUNDTABLE 22min sd col loan. Hinged upon story of heir to brick factory overloaded with bricks, psychological research contributes to realization of the need for sensitivity, fluency, flexibility and originality in the solution of business problems. A C

**Money—Forms and Functions** fs AMEX-PRESS 50fr si col free to schools and banks. How currency, checks, letters of credit, travelers cheques and other forms of money were created to meet specific needs. JH SH

**The New Role of Decision Making.** 5mp ICR ea 15min \$135 ea. Preview service charge \$10 ea. against future purchase. 1: **Decision Phobia.** 2: **How to Create the Best Climate in Decision Making.** 3: **Communications — The Life-line to Good Decisions.** 4: **Fact Finding — Motivational Methods.** 5: **How to Put Your Deci-**

sions to Work. Meeting leader's guide and visual digest with each film. A. C.

**Office Supervisors' Problems: The Grapevine** mp MH 9min sd col \$125 b&w \$65. Effect of rumor on office morale. One of a series which includes: **The Follow Through; How Much Cooperation; In the Middle; The Bright Young Newcomer; and By-Passed.** Series price col \$675; b&w \$350. Reviewed ESAVG 2/59 p90. SH C A

**Over-the-Counter Selling.** 5mp ICR ea 15min @ \$135. (Preview charge \$10 ea.). 1. **How to Say "No" Without Giving Offense.** 2. **How to Sell Creatively Without "Pushiness."** 3. **How to Keep Your Customers Coming Back . . . to You.** 4. **How to Help Win New Customers.** 5. **How to Merit the Rank of a Professional.** A C.

**Sales Report—Zero** sfs TRANSFILM 12min sd col loan. Purposes and production process of a sound slidefilm, including excerpts from typical productions. A

**20th Century Bookkeeping and Accounting** 3fs SVE si col set \$16.20; each \$6. Part I: **The Opening of the Bookkeeping Cycle.** Part II: **Using the Books.** Part III: **The Closing Phase of the Bookkeeping Cycle.** SH.

**Your Attitude is Showing** sfs ICR 47fr LP. \$79.50; \$10 approval service charge. Includes guide, mobile, set of participation cards. Emphasizes personal attitude as key to business success. A.

## EDUCATION

**Ambassadors With Wings** mp EXCELLO 28min sd b&w loan. Young civil air cadets visit each other's country to learn how otherlanders live and work and study. James Stewart narrates this film commemorating the 10th anniversary of the International Air Cadet Exchange. SH C

**" . . . And Gladly Teach"** mp NEA 28min sd col \$170; b&w \$75. The teachers—and especially the new teachers—and the company they keep. Designed to attract outstanding young people to the teaching profession, and to provide thoughtful laymen with greater understanding of its importance. HS C A

**Breaking the Language Barrier** mp MRI sd b&w loan. Language laboratory instruction methods at Pomona College, based on TV network program. TT A

**Carpet Under Every Classroom** mp HOCH 17min sd b&w \$100. The functions of a high school librarian, services to teachers and students. TT SH

**Children Who Draw** mp BRANDON 38min sd b&w with some scenes in color \$250, r\$22.50. Art teacher is able to reach 5-7-year-old Japanese children through their creative paintings. Winner of many evaluator's plaudits and international awards (Venice, Cannes, the Hague, USA-Robert Flaherty Award). C TT A

**The Challenge** mp NEA 28min sd b&w \$45. Penetrating pictorial summary of the 1955 White House Conference on Education. Produced by Westinghouse Broadcasting Corp. SH A

**Citizenship in Action** mp EFLA—INDIANA. 23min b&w \$100. High school students report to special studies class on their survey of good citizenship; application to school and adult life; what a student council is and does. JH SH PTA TT A

**Club Officers in Action** 3fs EDUFS si col set (3) \$16.50. Intended to be shown prior to election of class or other school organization officers. I: The President. II: The Secretary. III: The Treasurer. EI-HS

**Combination for Communications** 9fs plus 107p manual. INDIANA. Titles: **Better Bulletin Boards; Lettering Instructional Materials; Wet Mounting Pictorial Materials; How to Make Hand-Made Lantern Slides; Handmade Materials for Projection; Tape Recording for Instruction; Passe Partout Framing; High Contrast Photography for Instruction; Photographic Slides for Instruction.** TT C A

**Comenius, J. S., 1592-1670** fs UNESCO si b&w \$3.25. Highlights of the career and work of the exiled Moravian bishop often termed the "father" of visual education. Reviewed ESAVG 1/59 p37. SH C TT A

**Crowded Out** mp NEA 29min sd col \$170 b&w \$75. How overcrowding of schools results in children "crowded out" of their right and opportunity to learn. Frustrated teacher tempted to resign; puzzled parent finds classes conducted in corridors and basements, project materials crowded out of classrooms to make room for more seats. The 8th in a series of fine films produced by the NEA on urgent school problems. SH A

**A Design for Physical Education in the Elementary School** mp WAYNE 23min sd col \$190 b&w \$105. Classroom teacher and PE specialist collaborate in serving four 9-10-year-old problem children, against wide background of physical education activities. TT A.

**A Desk for Billie** mp NEA 57 min. sd col \$325; b&w \$110. The true story of a migrant child who found opportunity in schools across America, despite the apathy and even hostility of her father. SH A

**The Fraternity Idea** mp INDIANA 22min sd col \$200; b&w \$100. Champions frat life on basis of its role in developing character of the college students who join.

**Gregory Learns to Read** mp WAYNE 28min sd col \$235 b&w \$135. A real teaching situation in which children are taught to recognize, understand and pronounce words and acquire phonetic and other recognition skills. TT A.

**Interview with Robert M. Hutchins** rec FOLKWAYS 10" LP. Hutchins compares socio-economic situation of 1958 with that of 1921, 1933, 1945. Dis-

cusses Fund for the Republic and Commission on the Freedom of the Press. Problems of maintaining a free society in the 20th Century. SH C A

**Learning As We Play** rec FOLKWAYS LP \$5.95. Music and songs for exceptional children, stressing mental health, social, language and physical development. Pri TT

**A Longer Shadow** mp SREB 15min sd col apply. Sixteen southern states foster higher education by means of student contract program. Senator Lister Hill (D. Ala.) narrates. Available from SREB and 16 state film libraries. A TT

**Magazine to Transparencies** mp FLA-STATE 12min sd col \$90. Rubber cement technique for lifting pictorial material from magazines for overhead or slide projection. Caution on copyright restrictions. TT

**Making Teaching Effective** fs OSU 39fr si b&w \$3. The curriculum atmosphere in which audio-visual materials are most effective. TT.

**No Teacher Alone** mp NEA 20min sd col \$100 b&w \$40. The significance of teachers' professional organization with special reference to the National Education Association. SH C A

**Our School Life (Japan)** fs OSU 45fr si col \$4. Typical day in life of a modern Japanese school. EL

**Parliamentary Procedure for 4th-7th Grades** 2fs EDUFS si col \$11 (2). I: Order of business and how to conduct the meeting. II: Election of officers and operation of committees. EI

**Parliamentary Procedure in Action** 3fs EDUFS si col \$16.50 (3). Based on the book "The How in Parliamentary Practice" with special reference to Roberts Rules, especially helpful for new officers of student and adult groups. SH-A

**Pictures Teach at Penfield** mp EK 18min sd col loan. The role of audiovisual materials in today's elementary and secondary education is outlined for laymen and educators in actual case study of use of films, slide, filmstrips and other audiovisuals in an upstate New York school district. Students and teachers play themselves. SH-A TT

**Plan for Learning** mp USTEEL 30min sd col loan. A new school takes the place of the old. The role of the superintendent, architect, citizens committee, teachers. The purpose of the film is to suggest a broad system of procedure for communities faced with the need for additional classrooms. A TT C

**Point of Decision** mp OSU 17½min sd col \$160 b&w \$60. A school board meets to discuss the addition of a full time guidance counsellor to the faculty. Each brings his own viewpoint, the issue is not fully resolved in the film but is brought to the "point of decision." SH C A TT

# LUXOUT<sup>®</sup>

## DIM OUT or Black Out DRAPERIES

... offer a choice of effective light control

Photo above illustrates LuXout DIM OUT draperies softening outside light.

Classroom audio visual light control requirements differ according to circumstances. Many prefer total BLACK OUT light control; however, since LuXout led the way with DIM OUT light control draperies, many architects and engineers have indicated a preference for better student rapport through the use of LuXout DIM OUT draperies. LuXout offers both types to fulfill all light control classroom TV or audio visual projection needs.

For the answer to your light control problems, consult your LuXout Distributor or contact:

Free brochure, DIM OUT Folder and color samples available upon request.

Third grade pupils using the new EBF SHORTSTRIPS find a new and interesting way to study science

### "EXPLORING WITH SCIENCE" first of the new EBF SHORTSTRIP Primary Science Series:

This exciting new series of filmstrips has been designed to cover many of the most important aspects of science as taught at the primary grades level. Pictures are made up of colorful art drawings, each with a carefully worded, easy-to-read, short caption. One frame at the end is made up of short review questions.

#### NDEA Funds Apply on EXPLORING with SCIENCE SHORTSTRIP SERIES.

Schools participating under the provisions of the National Defense Education Act, will want to consider this SHORTSTRIP SERIES. NDEA FUNDS APPLY!

#### Individual Filmstrip Titles:

- Old Mother Sun
- Our Planet Earth
- You and the Universe
- Seasons Come and Go
- What Day Is It?
- When Night Comes
- What Is Weather?
- Power Moves Things
- Meet the Plant Family
- Meet the Animal Family
- Meet the Human Family
- You Are Alive

(Each filmstrip contains 14 frames in color.)

### EXPLORING WITH SCIENCE LEARNING ABOUT PEOPLE

Each a series of 12 SHORTSTRIPS, in handy box including one plastic hand-viewer.

Purchasers of complete series are entitled to purchase additional individual SHORTSTRIPS at \$1.66 each. Additional hand-viewers may be purchased at \$1.00 each.

# \$19.90

## NEW UNIQUE EBF SHORTSTRIPS DESIGNED FOR INDIVIDUAL A-V TEACHING IN PRIMARY GRADES

Encyclopaedia Britannica Films announces a revolutionary new filmstrip utilization program, designed to teach primary school pupils in an original and fascinating way using EBF SHORTSTRIPS. The SHORTSTRIP is prepared primarily for individual pupil viewing but can also be projected to the entire class. This unique teaching method has been compared to pupil use of a book from the classroom or school library. Two SHORTSTRIP series, one for Science and the other for Social Studies, have just been released by EBF. They were prepared by Eileen Nelson of the National College of Education, Evanston, Illinois.

#### FOR THE HOME—

EBF Shortstrips can be easily taken home for review or homework. Extra viewers and SHORTSTRIPS are economical.

#### FOR THE CLASSROOM—

Individual pupil viewing. Boys and girls love SHORTSTRIPS for their colorful pictures, and easy-to-read captions.

### What is a SHORTSTRIP?

The SHORTSTRIP is unique in that it is designed mainly for individual pupil viewing with a hand or desk viewer. It can be projected on a screen just as traditional filmstrips are projected for an entire class to see and enjoy.

But the SHORTSTRIP will find its most interesting use in the hands of the pupils themselves. The twenty-four SHORTSTRIPS in the current series are each fourteen frames long. They are packaged flat, inside and along one edge of a clear, plastic envelope. The envelope, with the filmstrip inside, is inserted into the small, plastic hand-viewer and moved upward for clear and effective viewing by the pupil. Along with each SHORTSTRIP, inside the plastic envelope, is a printed card containing additional frame-by-frame questions for the pupil to answer as he views the SHORTSTRIP. On the back of the card is a paragraph summary of the SHORTSTRIP content for the pupil himself to read. Each SHORTSTRIP can be easily removed from its plastic container for use in a regular filmstrip projector. Each series of twelve SHORTSTRIPS is packed in an attractive box for easy storage.

### "LEARNING ABOUT PEOPLE"—another EBF SHORTSTRIP Series for primary Social Studies

Many of the important concepts in the social studies curriculum at the primary grades level are covered in this series of twelve colorful and fascinating SHORTSTRIPS. Most of the pictures used in this series are actual color photographs of real children in interesting situations. One frame at the end is composed of short review questions.

#### Individual Filmstrip Titles:

- The Better to See You
  - The Better to Hear You
  - The Feel of Things
  - The Taste of Things
  - The Smell of Things
  - Homes Are to Live In
  - Clothing Is to Wear
  - Food Is to Eat
  - How Do You Feel?
  - Who's Afraid?
  - You Have an Idea
  - How Can You Say It?
- (Each filmstrip contains 14 frames in color.)

### LOW COST OF SHORTSTRIPS HELP SCHOOLS BUY MULTIPLE UNITS

Each series of twelve SHORTSTRIPS, with plastic hand-viewer, in handy box is priced at \$19.90. To enable more than one pupil to use these excellent teaching tools, purchasers of complete sets are entitled to purchase additional individual SHORTSTRIPS at \$1.66 each. Additional hand-viewers may be purchased at \$1.00 each.

# keeps the teacher up front

— where she belongs!

DuKane's auditorium-size sound slidefilm projector is the answer to educational filmstrip viewing, for any size group from a small class to an auditorium-full. Remote push-button controls permit the teacher to stand up front for undivided class attention. Brilliant, powerful lighting gives a clear, sparkling picture with lots of reserve power for the biggest screen. The separately packaged sound unit provides high fidelity reproduction of both speech and music.

Only DuKane makes a full line of sound slidefilm projectors, featuring fully automatic picture advance where impulse is provided on the record, plus remote control or manual operation.

**Growth of Flowers** mp CORONET 11min sd col \$110 b&w \$60. Time lapse shows accelerated growth of jonquil, jack-in-the-pulpit, phlox, lily, rose, zinnia, gladiola and water lily—sprouting, struggle for sunlight and air, and finally bursting into bloom. Pri Int JH SH

**Gypsy in the Trees** mp GYPSY 22min sd col apply Life cycle of the Gypsy Moth and large scale methods of eradication or control. SH C A

**How Does a Garden Grow?** fs MOODY 39 fr si col \$6 Seeds sprout, throw out primary and secondary roots, depend on light and water. JH

**How Nature Protects Animals** (Second Edition) mp EBF 11 min sd col \$120 b&w \$60. Remake of this widely used film, special prices apply when first edition prints are turned in. Int JH

**The Human Body: Nervous System** mp CORONET 13½min sd col \$137.50 b&w \$75. Basic functions, main organs and their neurons, principal areas of the brain. Microscopic views, animation and anatomical charts help visualize this complex system. JH SH A

**The Human Body: Reproductive System** mp CORONET 13½min sd col \$137.50 b&w \$75. Part of series for teaching physiology, this film describes male and female organs and functions. Live action photography of sperm and egg cells uniting. Ovum, uterus, zygote. SH C

**Insect Foods** mp DOWLING 14min sd col \$135. How and what insects eat shown in closeup detail. Many common and some strange insects are included. How this affects human life. Pri El JH

**Insects Astray** mp GEICY 13min or 26 min sd b&w loan. Once Nature's scavengers, cloth-eating insects have invaded man's home; chemical warfare where cloth is made. SH C A

**Life in a Cubic Foot of Air** mp CORONET 11min sd col \$110 b&w \$60. Yeast plants, molds, bacteria, amoeba, pollen grains. Composition of air and nonliving matter also examined. JH SH

**Life of the Molds** mp MH 21min sd col \$165 b&w \$85. Molds both destructive and beneficial. 100,000 varieties. Reviewed in ESAVG 4/59 p200. JH SH C

**Life Story of a Butterfly** fs MOODY si col \$6. The Anise Swallowtail from egg to maturity. Reviewed ESAVG 5/59 p261. JH SH C

**Little Animals** mp DOWLING 11min sd col \$110. Children discover that tiny insects are animals that feel, move about, get food very much as do the larger animals like their dog or cat. Pri. El.

**Living and Growing** mp C-W 11min sd col \$100 b&w \$50. A litter of young rabbits serves as object lesson for children learning the importance of food, shelter and rest. Pri.

**Microorganisms: Beneficial Activities** mp INDIANA 15 min sd col \$150; b&w \$75. Complete nitrogen cycle, antibiotic products, production of carbon dioxide by yeast. SH C

**Microorganisms: Harmful Activities** mp INDIANA 15min sd col \$150, b&w \$75. How bacteria produce enzymes and toxic waste products which may spoil food and cause disease. HS C

**Microscopic Wonders in Water** mp DOWLING 11min sd col \$100. JH HS

**Miniature Plants of the Desert** fs MOODY si col \$6. Companion fs: **Our Desert Treasure**, same. Pictorial story of the plant life of our southwestern deserts. Effects of irrigation. EL JH SH A Reviewed EDAVG 4/28 p192.

**Mosquito Larval Habitats** fs UWF si col. Classification of larval habitats as related to mosquito surveys. For sanitarians, public health personnel. C.

**Mother Deer and Her Twins** mp EBF 11min sd col \$120 b&w \$60. Twin fawns from the time they are two days old until they shift for themselves. Pri El.

**Orders of Insects** mp THORNE 30min sd col \$275 r \$7.50. General characteristics, then specific characteristics of each of the nine most common orders in live photography in natural habitat, color, closeup detail. SH C A

**Osmosis** mp EBF 16min sd col \$150 b&w \$75. Osmotic versus turgor pressures; diffusion, transpiration. Laboratory experiments and graphic techniques are used to explain this complex phenomenon. SH C

**The Ovulation of the Egg** mp KAN-STATE 13min sd col apply. Three ovulations, followed by the various steps of egg's passage through the oviduct, showing condition of the forming egg at each stage, in living, anesthetized hen. SH C A. USDA production.

**Partnerships Between Plants and Animals** mp CORONET 11min sd col \$110; b&w \$60. The "partnerships" considered include those between animal and animal, between plant and animal, and between plant and plant. Examples: ant and aphid, hermit crab and bryozoans, algae and fungi in

## I Choose Chemistry!

Designed to interest young people in science, particularly chemistry and mathematics. Tam, a ninth grade student, receives a chemistry set for his birthday and takes it to school. His interest in it leads to a career in chemistry. Produced by Ruth O. Bradley, San Jose State College.  
15 MINUTES. COLOR \$150, RENT \$7.50;  
B & W \$75, RENT \$5.

AND ON THE PRIMARY LEVEL...

## Kittens: Birth and Growth

Two children are present when their cat gives birth to kittens. They learn to care for the pets during an eight-week span. This simple science lesson prepares children for later pictures on human growth and assists teachers in discussions about motherhood. A Lawbetts production.  
11 MINUTES. COLOR \$110, RENT \$5;  
B & W \$60, RENT \$3.

**BAILEY FILMS, INC.**  
6509 DE LONGPRE AVE. HOLLYWOOD 28, CALIF.

lichen, red clover and nitrogen-producing bacteria, and red clover and the bumble bee. Int. JH

**Perri** rec DISNEYLAND 12" 33.3 rpm Story of two woodland squirrels, narrated by James Dodd, Pri El

**Plants Make Food** mp C-W 11min sd col \$100 b&w \$50. Two children learn something of the functioning of roots, stems and leaves; the transforming of water, minerals and carbon dioxide into food; role of chlorophyll and sunlight; importance of plants as our ultimate source of food. Int JH

**Reptiles and Their Characteristics** mp CORONET 11min sd col \$110, b&w \$60. The five orders that make up the reptile group, their common characteristics and some of their differences. Snakes, lizards, turtles, crocodilians and the rare tuatara in natural habitat and some of the ways in which they benefit mankind. Int JH SH.

**Rhythmic Motions in Growing Plants** mp HARLOW 11min sd col \$90. Time lapse photography of circumnutation, photo-reaction; climbing; tropistic reactions. Reviewed ESAVG 6/59 p299. SH C

**The Salmon's Struggle for Survival** mp NFBC 27 min sd col \$200; b&w \$120. Technological measures attempting to reconcile the use of fast moving rivers for industrial power with the annual upstream surge of the salmon at spawning time. Conservation measures to help the young fry in their downstream run to the sea. JH SH C A

**Sea Otters of Amchitka** mp THORNE 45 min sd col \$450 r\$20. Life history, ecology and behavior of this species, once almost extinct, now again abundant over most of its former range. Interrelationship with other wildlife in the western Aleutians, food habits, mother-pup relationship, group social behavior. SH C A

**The Scientists Speak: Biology** rec HARCOURT LP. Lectures on disk by George Gaylord Simpson, Rene J. Dubois, Herman J. Muller, Julian Huxley. Reviewed ESAVG 6/59 p303. SH C

**Seed Plants** 6fs CREATIVE 25-26fr. si col Set \$28 (6) ea \$5. Collaborator: Muriel Beuschlein, Chicago Teachers College. Titles: **Green Plants; Seeds; Roots; Stems; Leaves; Flowers and Fruits.** Int. JH.

**The Sunken Forest** mp THORNE 10min sd col \$100 r\$2.50. Holly forest at Fire Island Beach, 50 miles from New York City, preserved by efforts of conservationists for its natural wonders and ecological phenomena. JH-A

**Varicose Veins** mp AHA 7min sd col \$45. One of a series of American Heart Association films on basic cardiovascular subjects. Many colored diagrams help tell the story. SH C A

**Waterfowl in Action** mp UMINN 10min sd col. Franklin gull, gadwill, spoon-bill, teal, diving ducks, blue and lesser snow geese, whistling swans in water and in flight. Feeding habits and identifying field marks. Pri-A.

**The Woodpecker Gets Ready for Winter** mp MOODY 9min sd col \$75. Shows bird's efficient use of head, beak, claws and tail in providing for winter. EI JH

## SCIENCE General

**Adventures in Sound and Space** rec RCA LP \$1.98. Fiction titles: Blastoff; Free Fall; Space Station; Moon Crash; Space Storm; Mars and Secrets of the Canals. Narration and sound effects. EI JH

**Airplanes—How They Fly** mp EBF 11min sd col \$120 bGw \$60. Two sixth graders learn from model enthusiast how wings and power keep plane in the air. On actual airplane ride the pilot demonstrates the various controls. EI JH

**Animal Life** 4fs FH si col \$20, ea \$6. Four principles of animal life considered by teachers to be the most important for elementary study: **Where Animals Come From; Why Animals Need Food, Heat and Air; How Animals are Protected; Classification—Different Kinds of Animals.** Art, by Edwin Cram, based on consultation with American Museum of Natural History for authenticity. Int.

**Atomic Energy as a Force for Good** mp CHRISTOPHERS 30min sd bGw \$30. Texas rancher becomes convinced the atom can be made a power for peace and gives up his opposition to loca-

tion of an atomic plant in his area. (Paul Kelly) JH-A

**Basic Science Textfilms** 33fs RP 40-50 fr some col @ \$6 others bGw @ \$3. Arranged in nine subject categories: **Life Long Age** (6 col \$32.40); **Bird Study** (5 col \$27); **Astronomy** (4 col \$21.60); **Elementary Chemistry** (3 col \$16.20) **Dependent Plants** (2 col \$10.80) **Plant Study Group** (4 col \$21.60); **Weather Study** (1 col 2 bGw \$10.80); **Electricity and Magnetism** (3 bGw \$8.10); **General Science Group** (2 col 1 bGw \$13.50). Correlated with the Row-Peterson **Basic Science Education Series**; Teacher's Manual with each strip. JH SH

**Beyond Our Solar System** mp CORONET 11min sd bGw \$60. Telescopic photography and artwork explain basic concepts about stars, nebulas, major constellations, and galaxies beyond our Milky Way. Physical characteristics of these bodies; their great distances from earth and from each other. Int. JH

**Boats: Buoyancy, Stability, Propulsion** mp CORONET 13½min sd col \$137.50 bGw \$75. Archimedean principle explained; factors in design that make for stability; various propulsion methods; how a submarine submerges and rises. Int JH

**Boy Scientist** (series) 5fs LONG si col. Titles: **Bob Builds a Telescope; Bob's Rocket; Bob Visits the Moon; Bob's Microscope; Bob Visits an Atom.** EI

**The Calendar: Story of its Development** mp CORONET 11min sd col \$110, bGw \$60. Primitive concepts of time based on earth's relationship to heavenly bodies. Egyptian, Babylonian and Roman culture. Some consideration of the Mayan calendar. Int SH

**Clothes and Seasons** fs MOREHOUSE 5sfr si col \$4.80. How bodies lose heat. Little girl in bed with a cold, is amused by a puppet show which illustrates the good results of wearing a coat, over-shoes, etc. and eating the right food, all in proper season. Pri.-Int.

**Conquest of Space** (series) 2fs BASIC si col \$6.50 ea. **ICY** deals with the significance of the International Geophysical year; **Earth Satellite** treats of centrifugal force, gravity, and their relation to weather and radio communication. Strips include teacher guide, vocabulary drill, review. JH SH

**The Earth and its Moons.** 6fs FILMSED si captioned col 55-65 fr. Set (6) \$36; indiv. \$7.50. **How We Know the Earth's Shape and Size; Motions of the Earth in Space; The Earth as a Planet; Exploring the Space Around the Earth; Information from Satellites; The Moon.** Three further series, of 6 strips each, will complete this "Story of the Universe" coverage: **The Solar System; The Stars; The Universe.** Int TT A.

**Electronic Dynamic Demonstrator** TRANSLATION. Breadboard (3' x 4') mobile mounted with components and circuits to teach electronics from basic circuits through to radio and TV. The parts are joined with solderless connectors and can be dismantled at will. Circuit after circuit is added as the course

proceeds, culminating in completely assembled operating TV receiver superimposed on a large circuit diagram.

**Elementary Chemistry** (series) 3fs SVE si col \$6 ea. **Atoms and Molecules; Chemical Changes; What Things Are Made Of.** Int JH

**Engines and How They Work** mp CORONET 11min sd col \$110 bGw \$60. Operating principles of steam, gasoline, diesel, turbine, jet and rocket engines, and developments likely to come. Importance of the engine in our society. Int JH

**Exploring by Satellite** mp DELTAFILM 28min sd col \$240 bGw \$120. The U. S. satellite program documented by graphic animation to illustrate the physical laws of orbit, and actual photography of construction, testing, launching and tracking. How science gains from space exploration. JH SH C A

**Explorer in Space** mp UWF 10min bGw apply. U. S. Information Service release shows assembly of Jupiter-C rocket, instrumentation and launching. SH C A

**Gateways to the Mind—The Story of the Human Senses** mp TELEPHONE 60min sd col loan. Fifth in the series originally telecast, combines cartoon with live action to tell the story of the senses and their interaction. Reviewed ESAVG 1/58 p32. EI-A

**Geology** fs OSU 52fr si col \$4. Color photos illustrate basic geologic facts affecting the earth. EL

**How We See and Hear** fs MOODY si col \$6. Stresses use of our senses for awareness of sights and sounds of the world about us. EI-SH.

**In Which We Live** mp UWF 23min sd bGw \$69.45. USIA production describing the cooperative effort of 64 nations participating in the International Geophysical Year. SH C A

**Life Long Ago** 6fs SVE si col set \$32.40 ea \$6. Recreation of past ages with aid of Chicago Museum of Natural History exhibits. Coal age; reptile rule, the revelations of fossils. Reviewed ESAVG 4/59 p194. JH SH

**Man and the Moon** mp DISNEY 20min as col guide. Imaginary construction of a wheel-shaped satellite and an exploratory trip via rocket ship. JS SH

**Man in the Doorway** mp CYNAMID 25 min col loan. How the advances of chemistry contribute to conservation of natural (and human) resources. Finding new uses for heretofore waste products. JH SH A

**Mars and Beyond** mp DISNEY 30min sd col guide apply. An imaginary flight to the planet via space ship. JH SH A

**The Moon** map RAND McNALLY 46½x 26" folds to 6½x10½" \$1. New map of the moon shows 59 per cent of moon's surface in two quarter-views; color chart showing planets' size, position; data on tides, seasons. SH C A

**Moving Things on Land** mp CHURCHILL 11min sd col \$100 b&w \$50. Two children learn about friction. Importance of overcoming it to make movement easier and faster; what world would be like without it. Correlated with Health: Elementary Science texts. EL JH.

**Our Sky** 4fs FH 4fs si col ea \$6 set (4) \$20. Part of series **Why's of Elementary Science**. Individual titles: **What We See In the Sky; Our Solar System; The Earth in Motion; and Our Moon**. EL JH

**Pipes in the House** mp C-W 11min sd col \$100 b&w \$50. The contrast between a family camp-out supplying its own water, heat, etc., with the socially provided utilities at home give meaning to primary-elementary social studies. Pri El

**The Race for Space** fs NYTIMES si b&w \$2.50. 'Reviews centuries of past research, current moon "shots," inter-continental missile rivalry U.S.A. vs U.S.S.R. Discussion manual. JH SH

**Research in Steel** mp STEEL 26min sd col free. The role of research in the development of new steel products, as well as basic research carried on at the USS laboratories. Narrated by John Daly. SH C A

**Rockets: Principles and Safety** mp FA 11min sd col \$110 b&w \$55. Physics principles underlying rocketry. Why they can travel in outer space. Why they are dangerous and should not be built or fired by amateurs. EL JH

**Rocks for Beginners** mp J-H 16min sd col \$165. Fundamentals of rock classification; origin, characteristics. Meaningful identification of sample with formation. Elem.

**Satellite Globe** 12"; three-way mounting for convenient rotation; includes orbit ring for tracing the path of an earth satellite. Based on the launching angle, present and future satellite path can be traced. Miles-degrees-hours calibration. \$14.95. RAND-McNALLY.

**Satellites: Stepping Stones to Space** mp FA 17 1/2 min sd col \$170 b&w \$90. Explorer I illustrates principles of launching and orbiting. Why satellites are important to us. EL JH

**Science for Progress** 12 fs PRENTICE-HALL si col \$38. Guides, experiments, demonstrations. Each filmstrip starts with a key problem, illustrates each scientific idea or principle, and ends with a frame of review questions. 1) **Atomic Energy**, 2) **Securing Your Food**, 3-4) **Securing Good Health**, 5) **Light and Heat**, 6) **Astronomy**, 7) **Electricity**, 8) **Communication**, 9) **Water and Water Power**, 10) **Transportation**, 11) **Securing Continued Existence**, 12) **Air and Weather**. JH SH

**Science Teaching Kits** PRODESIGN. Actually working models enable students to operate and experiment in learning the science and technology involved in basic parts of the science curriculum. **Hydro Electric Dam and Generator** kit \$59.95; two sets of supplementary equipment for additional experiments each \$19.95. **Conservation Project** kit

\$16.95. **Water Project Pump** kit \$19.95, heavy duty battery \$2.45. **Water Treatment Plant** kit \$79.95, carrying case \$14.95, battery \$2.45. **Centrifugal Pump**, transparent to show workings, \$9.95. **Generator** kit \$19.95. **Water Treatment** chemical kit \$9.95. JH SH

**Science Wall Charts** DENOYER 50x38". Five units covering respectively The Science of Living Things, the Earth, the Universe, Matter and Energy, and Mankind. Unit 11 (ready Spring 1959) will include 12 charts on the Earth. Designed to be pictorially self-sufficient to permit use equally in lower and in the higher grades where text gives added necessary data.

**Snow, Servant of Man** study prints MOODY 11x14" on heavy stock, captioned and pre-punched for hanging. Set (16) \$10. Beauty and value as a natural resource; art forms in crystal patterns. Pri-SH

**Space Pioneer** mp UWF 10min sd b&w \$27.86. Flight of the U. S. Air Force rocket "Pioneer" from the base at Cape Canaveral, Oct. 11, 1958. Communication of data to ground stations, contribution to International Geophysical Year. Extra-military purposes. JH-A.

**Time** mp INDIANA-EFLA 15min sd b&w \$75. The sun as time-keeper; zone boundaries; International Date Line; the why and how of Daylight Saving Time; time from the stars; specialized uses of timing devices. JH SH

**We Use Power** mp C-W 11min sd col \$100 b&w \$50. Two children learn about harnessing of wind, water, steam, electricity, gasoline largely through their own experiments. Int JH

**What Are Stars?** rec DECCA 12" 78 rpm. A turtle builds an atomic scooter to explore space and on his return checks up his findings at the observatory. K-4

**What Makes Rain?** rec DECCA 12" 78 rpm. The adventures of three drops of water which become first vapor and their rain. K-4

**What Makes the Wind?** fs YLPF 51fr si col \$4.80. Movement of warm and cold air, effect of topography. Last 16 frames constitute test. Int. JH.

**The Wonders of Nature** 10fs EYEGATE av 38fr si col \$25; indiv \$4. Titles: **Trees: Man's Best Known Plants; The Story of Seeds; Wildflowers; Homes; Interesting Animals; Around the Water; Sky-Wise; It's All Weather; Look About You; Review and Test**. EL JH

**Wonder World** (Series) 4mp MOODY ea 12min sd col ea \$105. Using the format (subtitle) **Motivation by Identification**, the series has "Uncle Bob" influence neighborhood children to appreciate the **Wonder of Our Body; Wonder of Water; Wonder of Reproduction; Wonder of Grasshoppers**. JH

**Wonders of Snow** fs MOODY si col \$6. Design patterns found in snow crystals offer suggestions for creative art work. EL-SH.

## SCIENCE

### Physics & Chemistry

**Acids, Bases and Salts** mp CORONET 21min sd col \$220; b&w \$120. The Arrhenius classical definitions are used to explore the properties and uses of chemical compounds whose water solutions contain ions. Household and industrial uses, and methods of preparation commercially and in the laboratory are shown. The theories of Bronster and Lowry, and Lewis are considered. SH C

**Chemistry by Record** rec AUDIO AID 12" LP \$3.65. Name, spelling, definition and pronunciation of 42 elements, 86 chemistry and 98 atomic science technical terms. SH C.

**The Colloidal State** mp CORONET 16min sd col \$165 b&w \$90. Colloids defined and distinguished from solutions and suspensions; how they may be prepared and destroyed; their uses in chemistry of everyday life. SH C

**Destinations of Tomorrow** mp AUTONETICS 12min sd col free. The development of inertial navigation systems such as made possible the voyage of the Nautilus under the North Pole, and the prospect of space travel. A landing on the moon is visualized. SH C A

**Electricity and Magnets** fs FH si captioned col Set (4) \$20; indiv \$6. Titles: **How Electricity Helps Us; Magnets; Static Electricity; Current Electricity.** Pri

**Heat, Light and Sound** 7fs JAM si col ea \$5.75 series (7) \$31.50. Titles: **Cause and Nature of Heat; How Heat Causes Expansion; How Heat Travels; Light and How It Travels; Light and Color; Cause and Nature of Sound; How Sound Travels.** JH SH

**Hydrogen** mp CORONET 13½min sd col \$137.50 b&w \$75. Historical background of its discovery, how it is produced in laboratory and commercial, properties—including the electron theory of covalence. Uses in field of nuclear energy. SH C

**Inside the Atom** mp NFBC 11min sd b&w \$40. A trip behind the lead-sheathed walls of Canada's Chalk River atomic plant. Animation explains chain reaction. Experiments in medicine and agriculture. JH SH C A

**Ionization** mp CORONET 18½min sd col \$192.50 b&w \$105. Theory of ionization defined; electrolytes, dissociation, solvents, electrovalent and covalent compounds; applications of ionization in industrial chemistry. SH C

**Laws of Conservation of Energy and Matter** mp CORONET 8min sd col \$82.50 b&w \$45. Importance of the laws as basic principles of science is emphasized by means of animation and other demonstration techniques. Matter and energy, while indestructible, are shown under Einstein's theory to be interconvertible. SH JH

**The Laws of Gases** mp CORONET 13½ min sd col \$110 b&w \$60. The gas laws of Boyle, Charles, Dalton, and Avogadro are explained and their importance in physical science is emphasized. Relationship of pressure, volume and temperature of confined gas, determination of molecular weights, law of partial pressures. SH JH

**Light and Eyes** fs FH si captioned col set (4) \$20, indiv ea \$6. Titles: **How Light Helps Us; Bouncing and Bending Light; How Our Eyes See; Some Strange Eyes of Animals.** Pri

**Man in the Doorway** mp CYNAMID 25 min col loan. How the advances of chemistry contribute to conservation of natural (and human) resources. Finding new uses for heretofore waste products. JH SH A

**Minerals on Parade** 3fs SWEETMAN si col set (3) \$24 with text booklet. Story and examples of common minerals that can be found and identified in most locations. Reviewed ESAVG 12/58 p635. JH-A

**Nitric Acid Compounds and the Nitrogen Cycle** mp CORONET 18½min sd col \$192.50 b&w \$105. Laboratory and industrial production of nitric acid; its properties and important uses in explosives, paints, photo chemicals, fertilizers. The overall concept of nitrogen fixation. SH C

**Nitrogen and Ammonia** mp CORONET 16min sd col \$165 b&w \$90. Laboratory demonstration of properties of molecular nitrogen and some of the simpler compounds. Properties, uses and production of ammonia. SH C

**Rockets, Satellites.** Plastic scale models, free "rocket encyclopedia." Most kits include human figures in action poses, to give size ratio. Assembly by students. Line also includes boats, automobiles, armaments. REVELL.

**Solar Energy Converter (kit)** HOFFMAN \$14. Solar energy experimental kit includes a half-dollar-sized silicon junction energy converter. Light from a 150-watt lamp is converted into sufficient electrical energy to operate a tiny electric motor.

**Solutions** mp CORONET 16min sd col \$165 b&w \$90. Ionic and nonionic solutions defined and common types visualized. Factors which influence solubility such as temperature, pressure and composition. Practical applications. SH C

**Wave Propagation and Antenna Theory** 2fs UWF sale. Part I: 72 fr b&w two 16" LP 42min; efficient antenna radiation, feeder, power line. Part II: 39fr b&w two 16" LP 30min. How antennas receive electro-magnetic waves and the effect of polarization on reception; mobile unit antennas in tactical and fixed station antennas in strategic operations. C

**The World of Molecules** mp C-W 11min sd col \$100 b&w \$50. Animation helps to visualize the size and behavior of molecules in a solid, a liquid and a gas. Two children enliven the presentation by their experiments. Correlated with Heath Elementary Science Texts. Int. JH.

## SOCIAL STUDIES

### Economics

**The American Economy** fs NYTIMES 58fr si b&w \$2.50. Why U. S. is richest, changes in industry, slumps, government. Soviet challenge. SH C A

**American Look** mp JAM 20min sd col loan. Chevrolet's medal-winning story of what's on the drawing boards for tomorrow's American way of life. JH A

**Automation** mp MH 84min sd b&w \$275. More than mechanization, the new trend in industry and other fields of American life is discussed by people of varying viewpoint on this Edward R. Murrow "See It Now" program. SH C A

**Behind the Ticker Tape** mp UWF 21min sd col free. A complete Stock Exchange transaction is shown from the customer's order to consumation on the Exchange floor, and its record on the "tape." SH C A

**The Bright Promise of the American Farm Market** mp FORTUNE 12min sd col \$275 or free loan. Outlines factors at work that strengthen the farm market. Used for sales training by firms selling this field. C A

**The Changing American Market** mp FORTUNE 20min sd col \$300 also loan. Visualizes series of magazine articles and the book (Hanover House) with same title. Revolution in incomes, trek to Suburbia, major goods and service markets. C A

**Date With Liberty** 5mp CASSYD ea 5min sd b&w set of five \$125. Short discussion films based on **Almanac of Liberty**, recent book by U. S. Supreme Court Justice Wm. O. Douglas. These discussion shorts, presenting the Bill of Rights as a living testament of our freedom, have been chosen for inclusion in the Defense Department Information and Education Screen Magazine. SH C A

**The Eagle's Strength** mp UWF 30min sd col \$157.62. U. S. Air Force Materiel Command employs automation in processing requisitions from any Air Force base anywhere in the world in a matter of minutes. A picture of the nation's "biggest business" that surpasses in size any private enterprise operation. SH C A

**1104 Sutton Road** mp CHAMPAPE 30 min sd col free. Documentary news-reel treatment of a panel discussion of various viewpoints on productivity. Does not plug sponsor or his product. Panel discussion trailer included on request. SH A C

**Everybody Knows** my CCUSA 15min sd col apply. Shutdown of factory throws workers out of job. Different viewpoints result in different explanations as to profits, wages, prices, cost of living, etc. This Chamber of Commerce film's viewpoint is that higher wages are good only if matched by higher productivity. SH C A

**Expanding World Relationships** mp UWF 11min sd col \$64.39 (USIA). Animated cartoon contrasts isolation of Jefferson's day with present close interrelationship of nations. SH C A

# HISTORY COMES TO LIFE THROUGH OUR DYNAMIC FOUR-POINT PROGRAM!

The completion of the new series, *The Chronicles of America Filmstrips*, rounds out our four-point program to enrich and vitalize the study of American history as never before possible. Through these rare teaching tools our precious democratic ideals are projected into their true, dramatic dimensions — to inspire our youth to their devotion and preservation.

Prepared by eminent specialists in history and education, these authoritative, vividly-presented books and filmstrips bring to the student a feeling of personal identification

with the struggles and accomplishments of the great leaders who have influenced and shaped our civilization.

Each of the four key points in our program is a flexible and versatile instrument, offering almost limitless creative teaching opportunities. Together, they form an unprecedented, comprehensive apparatus for learning through participation in "living" American history. We urge you to order them *today* to assist you in your vital task of guiding our citizens of tomorrow.

**NEW**

## THE CHRONICLES OF AMERICA FILMSTRIPS

15 UNITS

15 Dramatic Milestones

Already, the excellence of this latest visual creation has proved its value to the high purposes of our program. Our young citizens will see our glorious past come to life — Columbus' great voyage, the early settlers, the War of Independence, the opening of the West, Washington, Lincoln, the War Between the States.

**Now Ready for Immediate Delivery**

Largely based on the documentary photoplays of the same name, the filmstrips were prepared with painstaking care to make available this unique source of *original* material in modern, greatly improved form at a fraction of the original cost. The fifteen filmstrips and the valuable Teacher's Guide have now been completed. Orders are being filled without delay.

**\$97.50 FOR THE COMPLETE SERIES  
OR \$7.00 EACH  
Comprehensive TEACHER'S GUIDE Free**

## THE PAGEANT OF AMERICA FILMSTRIPS

30 UNITS

An Award-Winning Series

These famous filmstrips established the high criteria for visual productions. From the American Indian to the Atomic Age, the story of America's growth to world leadership, its moral and material strength, is re-created in a manner which *must be seen to be believed!*

Already approved, adopted or listed by important Boards of Education, the scope of the material in this series is so wide that utility extends beyond history to many other subjects.

**\$195.00 FOR THE COMPLETE SERIES  
OR \$7.00 EACH  
TEACHER'S GUIDE FREE FOR EACH UNIT**

*The two series of filmstrips were created  
under the editorial direction of  
RALPH H. GABRIEL  
Sterling Professor of History, Emeritus,  
Yale University*

## THE CHRONICLES OF AMERICA 56 VOLUMES

ALLEN JOHNSON - ALLAN NEVINS, Editors

History at Its Readable Best. Each volume tells an exciting story of men and women or forces in action, expertly written by a distinguished author who presents his theme vividly with all the appeal of good fiction. The 56 volumes fall into nine topical groups, from the early days of the Red Man to the momentous end of World War II. These remarkable books, long noted for their accuracy and literary quality, are an important "must" for every school.

**\$199.00 complete, or \$3.95 per volume**

## THE PAGEANT OF AMERICA 15 VOLUMES

RALPH H. GABRIEL, Editor

Magnificent Picture Stories. The adventures and statesmanship of our people are revealed in a panorama of 11,500 rare pictures and maps, spun together by scholarly, colorful text in a succinct format. The topical treatment covers, in addition to the more orthodox aspects of history, such subjects as religion, art, sports, etc. Replete with accurate detail and professionally indexed, these books have become standard for use at all levels.

**\$147.75 Complete, or \$10.75 per volume**

## Record Sales Boom

The tenth anniversary of the introduction of the long-play record finds this type of platter with 68 percent of all record sales, according to Columbia Records. Its own 1958 output was 25 percent above 1957; total volume up 12 percent; biggest sales year in the company's history. Both record and phonograph sales reflected growing consumer interest in stereo, according to the report, "despite certain confusion that inevitably accompanies introduction of any new product such as stereo, the public apparently understands that all records will sound better on stereo equipment and that no past or present purchases are obsolete."

## TV Needs Film

Crawley Films of Canada call attention to the fact that of the top ten (Nielsen rating) TV programs at year's end, every one was a filmed show, not a single one was live. A Crawley crew is to spend a full year on location, producing a series of 13 half-hour films in both French and English, on the lives of the people who live along the 700 miles of the north shore of the St. Lawrence River, all the way from Quebec to Strait of Belle Isle.

## Beseler Handling "Topcon"

The "Topcon" single-lens reflex camera and associated photographic accessories will be sold in this country by the Charles Beseler Company. Tokyo-trained repair specialists will service the line at the Beseler plant.

## A Convention Gimmick, Too

"Planotype" alphabets in ten type sizes are now available transparent as well as opaque. A recent Ozalid convention exhibit showed how to use both types in making overhead transparencies — and did a land office "business" besides in decorating conventioners' badges with the proper (?) "Bill" or "Chuck" or what-have-you nicknames. Distribution of "Planotype" is pushed by Camera Equipment Company.

## People in the News

James E. LeMay takes over Alan Finstad's post as Manager of Visual Aids at Ozalid; Alan moves over to Dage to head up their burgeoning educational TV promotion. Jim has a strong AV background, before serving as Ozalid's mid-west manager he was assistant chief of the AV Center at The Air University, Maxwell Field, Alabama.

Carl L. Bausch has retired as board chairman of the Bausch and Lomb Company, his place being taken by former president Carl S. Hallauer. Executive vice-president William W. McQuilkin becomes president and chief executive officer.

John R. Price, Advertising Director at Gates Radio Co., now carries the broader title of Director of Advertising and Public Relations.

Wally Moen, well known photo industry executive, has been appointed Sales Director for Geiss-America, distributor of recording, dictating and optical instruments. Featured is a pocket-sized wire recorder as well as a new drop-in magazine tape dictation machine. Distribution will be through audiovisual dealers.

Chester G. Cooley, president of Da-Lite Screen Company, announces the appointment of Murray Merson as retail division sales manager, operating out of Da-Lite's New York office. Da-Lite currently is celebrating its 50th Anniversary.

Forrest O. Calvin, founder (1931) of the 16mm film production laboratory that bears his name, becomes Board Chairman as Leonard W. Keck (37) takes over the presidency. Vice-pres Neal Keehn is now general sales manager but retains charge of company's well-known workshops. Comptroller James Y. Hash now secretary-treasurer. Old timers Lloyd Thompson, Larry Sherwood and Betty Calvin are board members.

F. Alton Everest switches from the production staff of the Moody Institute of Science to director of distribution, replacing G. Keith Hargett who resigned to join Westminster Films, Pasadena.

Irving Browning, president of Camera Mart, Inc., is offering for sale his museum collection of still and motion picture cameras dating back to the days of Daguerre and Brady. Mr. Browning is a member of the Association of American Museums and founder of the Society of Cinema Collectors and Historians.

Joseph E. Frederick, research chemist, has been named to the newly created post of manager of Ozalid's Customer Technical Service Department. Prior to joining Ozalid in 1957 Mr. Frederick was a high school chemistry teacher and Army research chemical engineer.

Don Parson, formerly with Moody Institute of Science, is the new West Coast representative for SVE. He will maintain a complete inventory to serve the Pacific Coast States.

Avalon Daggett announces the termination of her distribution agreement with Educational Film Distributors, Inc., and Morehouse Associates, Inc. Communications concerning her films are henceforth to be addressed to Avalon Daggett Productions, 441 No. Orange Drive, Los Angeles 36, Calif.

Adolph Wertheimer, featured speaker at a two-day sales training meeting arranged by the National School and Industrial Corp., at Raleigh, N.C., pointed out a tremendous A-V market in the equipping of 300,000 new classrooms and in the obsolescences of the many thousands of screens and other equipment installed prior to 1950.

# Teaching is easier, learning more fun with a **GRAFLEX-SVE SCHOOL MASTER** Filmstrip and Slide Projector

SCHOOL MASTER 750 SHOWN WITH ACCESSORY REWIND TAKE-UP  
AND SEMI-AUTOMATIC SLIDE CHANGER

Because the School Master gives you such brilliant projection (even in a partially lighted room), your class can see vividly what you are talking about. Your teaching materials are presented with maximum effectiveness and impact. Makes it easier for you to teach . . . more fun for your classes to learn.

The School Master converts from filmstrip to 2" x 2" slide projection in seconds, without tools or removal of parts. Threading and framing are simple and fast. Entire optical system removes as a unit for cleaning or replacing of lamp. Exclusive built-in carrying handle provides easy portability.

School Master Projectors are priced from \$84.50 and are available in 500 watt and 750 watt models, manual or remote control. Exclusive accessory Rewind Take-Up allows filmstrip to be rewound automatically into storage container; only \$7.50. Fits all School Master models.

## **NEW!** A **GRAFLEX** FILMSTRIP PROJECTOR

**TO MEET THE MODEST BUDGET**

*Instructor 150* only **\$39.95**

Exclusive Push-Button film advance mechanism is so simple any pupil can operate it. Just insert filmstrip into the projector, frame, focus, and push down film advance lever.

Permanently mounted 3" f/3.5 lens focuses from 19 inches. New 150 watt lamp with proximity reflector for brilliant projection. Exclusive lamp ejector for easy lamp replacement. Rear elevation adjustment. Complete operating instructions on rear plate of projector. At \$39.95, the lowest-priced filmstrip projector on the market!

\*Trade Mark.

For additional information, write Dept. ES-99, Graflex, Inc., Rochester 3, N. Y. A subsidiary of General Precision Equipment Corporation. Prices are subject to change without notice.

**GRAFLEX®**

A  
**GENERAL  
PRECISION  
COMPANY**

**ARE YOUR WINDOWS AS MODERN AS YOUR METHODS?**

Audio-Visual teaching makes your coverings out of date unless...

**THEY MAKE ANY ROOM BLACK-OUT DARK IN SECONDS... EVEN AT NOON!**

**YET GIVE AN INFINITE RANGE OF LIGHT CONTROL!**

**AND COST LITTLE TO START WITH... LESS TO MAINTAIN!**

*Sure*, black-out coverings get the room dark. But they don't cut down on glare. *Sure*, conventional coverings control daylight. But they don't achieve an effective black-out. That's why both are out of date as a one-room school! Only Flexalum Audio-Visual blinds can give you the precise light control you need for everyday class activities... and *also* plunge the room into absolute darkness for Audio-Visual teaching. Reasons: Flexalum is made with more slats, which means greater overlap—plus special light channels which keep light out around the sides. All this and you *save*, too. Because Flexalum also gives more years of service than any other type of window covering... *a promise we back with a five-year written guarantee*. Look into Flexalum for your school.

**AUDIO-VISUAL BLINDS**  
*Flexalum*®

Newest Flexalum exclusive: plastic-lined side-channels eliminate noisy "flutter"

 EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE is published monthly by Educational Screen, Inc. Publication office, Barrington, Illinois; Business and Editorial Office, 2000 Lincoln Park West Bldg., Chicago 14, Illinois. Printed in the U.S.A. Re-entered as second-class matter October, 1953 at the post office at Barrington, Illinois, under the Act of March 3, 1879.

ENTIRE ISSUE COPYRIGHT 1959 BY THE EDUCATIONAL SCREEN, INC.

RCA "Life-Tested"\* 16mm Projectors are the only projectors with features engineered for one single purpose . . . operation so easy that the greenest amateur can roll a show with sight and sound as perfect as you'd expect from a professional projectionist.

**"Life-Tested" 16mm Senior Projector**  
Easiest film threading of any 16mm machine, designed for 1200-watt lamp to throw maximum light on screen, lubrication built in, powerful two-case model for big-area duty.

**"Life-Tested" 16mm Junior Projector**  
New pressure guides hold film with feather touch, easiest film threading ever designed, 1200-watt lamp throws most light on screen, compact one case model.

Look, listen and operate one at your RCA Audio-Visual dealer's or have him come and demonstrate. He's listed in your Classified

Directory under "Motion Picture Equipment and Supplies."

Ask him too, about new RCA "Scholastic" record players and tape recorders designed especially for rugged school use.

*\*Rigid endurance standards have been set for RCA "LIFE-TESTED" Projectors. Individual components as well as finished projectors are subjected to continuous testing to evaluate the durability and efficiency of all operating parts. "LIFE-TESTED" at RCA means better, more reliable performance from RCA projectors.*

## Josephine Hoffman Knight Dies

Josephine Hoffman Knight, business manager and secretary-treasurer of EDUCATIONAL SCREEN & AUDIOVISUAL GUIDE, died in Chicago on August 7. Born in Spring Valley, Illinois, she was a graduate of the University of Illinois and a member of Phi Beta Kappa. Her personal life was closely bound with that of her sister, Mrs. Mary H. Hill, and her nephew, both of whom survive her. Her husband died in 1950.

Jo Hoffman Knight joined the staff of EDUCATIONAL SCREEN in its infancy, working under its founder, Nelson L. Greene, at all of the jobs necessary to turn out a monthly audiovisual magazine. She reported, she wrote, she edited, she reviewed, she sold ads, she kept books, she kept faith. It is possible the magazine could not have survived its lean years without the economies she devised and firmly enforced. She worked persistently, devotedly, in an unassuming way to develop EdSCREEN and the audiovisual idea. She seemed little concerned about who got the credit and praise. She worked hard and long—and obviously loved her work.

She had many friends in the field, especially within the audiovisual industry. She valued highly the contributions of the makers of equipment and materials. She knew many of the audiovisual pioneers. I can recall her smile when someone referred to her as a pioneer. What woman young, active and attractive as Jo was up to her untimely end wants to be so called? Yet indeed she was an AV pioneer, an AV great.

It might rightly be said that she gave her life to EDUCATIONAL SCREEN and the audiovisual field. Her devotion, her work month after month, year after year have left their mark permanently.

This is enough to say about her. She would prefer, I know, that space be used instead for ads and articles and editorials. The magazine is her most fitting memorial. She lives on in it and through it.

— June Sark Heinrich

# A wide range of Coronet teaching films is available under National Defense Education Act

Each Coronet film is individually planned and produced to help classroom teachers, supervisors and counselors increase the effectiveness of their respective programs. All but a few of these films are available in full, natural color and in black-and-white.

**Special catalogues available free . . .**  
To simplify the selection of the most useful films in each area, Coronet has prepared condensed and special listings for Titles III, V, VI, and VIII. These catalogues not only list and describe the individual films, but also include suggestions on selection and purchase, as well as price quotations. They have been assembled into a convenient National Defense Education Kit, or may be requested individually as required. There are also new catalogues in other areas to assist in developing

a balanced program of instructional materials. Simply use the coupon below or write your special requirements to: **Coronet Films, Coronet Building, Chicago 1, Illinois.**

- . . . . .
- **THE CORONET** •
- **Chemistry FilmSet** •
- Of special interest to those making •
- film selections under Title III is the •
- Coronet Chemistry FilmSet—18 •
- outstanding films, ranging from 8 •
- to 22 minutes in length, to help •
- teach the major units of instruction •
- in high school chemistry. Including •
- a fine steel cabinet to house the •
- films and useful printed materials, •
- the FilmSet may be purchased •
- for as little as \$280 per year for •
- four years. •
- . . . . .

More than 500 Coronet instructional films may be purchased under the various provisions of the National Defense Education Act, including—

- Science (Titles III and VIII)**
- Mathematics (Title III)**
- Guidance (Title V)**
- Modern Foreign Languages (Titles III and VI)**
- Vocational Education (Titles V and VIII)**

## NAVA Convention Great Success

With an appropriate send-off by a telegraphed message from President Eisenhower, the 19th Annual Convention and Exhibit proceeded to hold the largest and most successful meeting in its history. Attendance was up eleven percent over any former year, in excess of 2,500.

Keynote speaker Charles H. Percy, president of Bell & Howell, warned the audiovisual industry of our country's extreme educational crisis. He placed much responsibility on the industry's shoulders for overcoming this cultural and technical lag. National survival, said Percy, is dependent upon re-evaluating our educational aims, making the necessary sacrifices to attain them, and finding faster, more thorough means of communication.

The annual Audio-Visual Worship Service was conducted by Dr. James K. Friedrich, president of Cathedral Films. The hymn singing, readings

NAVA President P. H. Taffarian and Executive Vice-President Don White read telegram from President Eisenhower extending best wishes for a successful convention.

and music were visualized in a demonstration of religious applications of audiovisual materials.

Exhibitors reported exceptionally fine results from their showings, revealing greater interest and enthusiasm than ever. Language laboratory equipment received considerable emphasis, as did rear and overhead projection equipment.

Newly elected NAVA president for the coming year is William G. Kirtley, president of D. T. Davis Company, Louisville, Kentucky. Serving as officers are First Vice-President Harvey W. Marks, Visual Aid Center, Denver; Second Vice-President Mahlon H. Martin, Jr., M. H. Martin Company, Massillon, Ohio; Secretary Harold A. Fischer, Photosound of Orlando, Orlando, Florida; and Treasurer Robert P. Abrams, Williams, Brown & Earle, Inc., Philadelphia. Immediate Past President P. H. Jaffarian is now serving as chairman of the Board of Directors.

## Industrial Film and A-V Exhibition

This year's Industrial Film and A-V Exhibition will be held from Sept. 28

to Oct. 1 at the Trade Show Building, 500 Eighth Ave., New York City. Many exhibits and demonstrations will be given of the varied uses of AV materials, as well as an extensive lecture program, headlined by Fred A. Niles and Ott Coelln.

The Metropolitan New York A-V Association will construct a model classroom and present lectures and demonstrations on the uses of instructional materials and closed-circuit TV. Dr. Irene F. Cypher will preside over the Association's business meeting.

The Industrial Audio-Visual Association, The National Visual Presentation Association and the National Association of Educational Broadcasters will hold regional meetings.

Additional attractions at the Show will be exhibits displayed by the U. S. Army and the U. S. Naval Training Center, showing the place of audiovisuals in their operations. Continuous screenings will be held of recent international prize-winning films, and the winners of the First Annual Industrial Film Awards, sponsored by Industrial Photography, will be shown.

where you need it! when you need it!

There's no need for a special room assignment, no delay, when the classroom has LEVOLOR A.V. (Audio-Visual) VENETIAN BLINDS. These blinds give complete control of ambient light to suit the subject, projector and student activity.

Today, any classroom can be converted for Audio-Visual instruction inexpensively by the installation of LEVOLOR A.V. BLINDS.

Write for Levolor's invaluable survey report "How Dark Should Classrooms Be For Audio-Visual Instruction?" No charge or obligation. Write to Audio-Visual Dept., Levolor Lorentzen, Inc., 720 Monroe St., Hoboken, N. J.

 HOW DARK SHOULD CLASSROOMS BE FOR AUDIO-VISUAL INSTRUCTION?

Michigan's English Language Institute using TV

## Teacher Training Via Closed-Circuit TV

A closed circuit television system is being used by the English Language Institute, University of Michigan, to supplement and improve the training of teachers. The system is financed by the Ford Foundation and employs RCA equipment. Since 1941, the Institute has trained more than 2,000 U. S. and foreign teachers, who have in turn taught English to some 1,500,000 persons around the world.

The TV system, located in the North University Building, permits an Institute instructor to teach a class of foreign students while teacher trainees watch and discuss the classroom per-

formance next door.

The foreign students in one classroom receive such phases of English language instruction as pronunciation, sentence patterns and vocabulary while a second instructor, doubling as a cameraman, focusses on them. In an adjoining classroom, as many as 100 teacher trainees can view the TV picture on a large projection screen, discussing the "show" without disturbing the televised class.

The Institute TV system is the fourth on the University of Michigan campus. The new system was planned and supervised by Professor Garnet R. Garrison, Director of Broadcasting, and Frederiek M. Remley, Jr., Technical Director of Radio and Television.

## Calendar

Sept. 2-13—North American International Photographic Exhibit, nineteenth annual; closing dates for prints July 24 and slides, August 7. California State Fair and Exposition, Sacramento, Calif.

Sept. 6-11—International Conference on Audio-Visuals in the Church, 16th annual, Green Lake, Wis. Dept. of AV and Broadcast Education, National Council of Churches, 257 Fourth Ave., New York 10, N. Y.

Sept. 28-Oct. 1—Industrial Film and AV Exhibition, New York City.

Oct. 5-9—Society of Motion Picture and Television Engineers, 86th semi-annual convention, Statler-Hilton Hotel, New York City.

Oct. 26-30—Society of Photographic Scientists and Engineers, annual national conference, Edgewater Beach Hotel, Chicago, Ill.

Oct. 26-30—National Association of Educational Broadcasters, Sheraton Cadillac Hotel, Detroit, Mich.

Nov. 20-21—Michigan Audio Visual Association, fall meeting, Western Michigan University, Kalamazoo, Mich.

## 86th SMPTE Convention

"Motion Pictures and Television in the Space Age," will be the theme of the 86th Semi-Annual Convention of the Society of Motion Picture and Television Engineers, to be held October 5-9 at the Statler-Hilton Hotel in New York.

The program for the 86th Convention will include a week of sessions devoted to: a symposium on film steadiness; cinematography; space technology and image sensing; photography—laboratory practices; photography—sound recording and reproduction; photography—instrumentation and high-speed; international television; television—equipment and practices; television—scientific and military uses; television—recording, including video tape. Authorities in the field will deliver technical papers at each of the sessions.

Five annual SMPTE awards and fifteen Fellow memberships in the Society will be presented to outstanding individuals in the motion picture and television industries during ceremonies on the second night of the convention week. A special feature of the convention will be an exhibit of the latest motion picture and television equipment.

**Forse** MANUFACTURING COMPANY  
2349 SULLIVAN AVE. • ST. LOUIS 7, MISSOURI

At the new AASA award-winning Centralia Junior High School, Centralia, Washington, E. James Livingston, District Audio-Visual Coordinator, Centralia School District No. 401, says:

**“Each of our 32 teachers can operate our Pageant Projectors like a veteran projectionist.”**

“We’re delighted with the machine’s simplicity. “But nevertheless, these projectors got the same careful dollar-for-dollar scrutiny we give to everything we buy. We must be stringent, because with us these machines are slaves. They run constantly—90% of the time at least. “In analyzing projector value, we looked long and hard at picture and sound quality, too. We found that the Pageant projects a sharp and brilliant screen

image and literally fills the room with clear sound. “Another thing we like about these machines is the lifetime lubrication. Not having to keep bothersome lubrication records is a real pleasure.” (Pageants don’t require any oiling by the user.) *If you would like a Pageant demonstration in your school, your nearby Kodak Audio-Visual Dealer will gladly serve you. Or, for detailed literature, write for Bulletin V3-22.*

*Even in classrooms sunshine bright*

## **AO's NEW OVERHEAD DELINEASCOPE**

*gives the clearest image you've ever seen!*

This revolutionary new overhead projector, by American Optical Company, was developed around a powerful 1000 watt light source to give you the brightest...biggest projected screen image you've ever seen. Even the extreme corners are sharp and clear because a specially designed Fresnel lens affords perfectly balanced illumination to every square inch of screen area.

This precision teaching instrument will project all the line, form and color of a 10" x 10" transparency up to a huge 177 sq. ft. screen image... in crisp, accurate detail.

You can face your class at all times... see faces instead of shadows... observe every movement and expression of subject reception and understanding... maintain maximum control through an entire presentation.

AO's Overhead Delineascope helps give your pro-

gram an unlimited flexibility that is not possible with any other AV medium. You can emphasize or dramatize by adding to your prepared teaching material on-the-spot.

You will surely want to see all the new, exclusive features that make this exceptional instrument a practical investment in creative teaching. Talk to your AO Salesman or Audio-Visual Dealer. He will be happy to arrange a convincing demonstration at your convenience.

For further information mail the coupon below.
